Last year I drew your attention to the large increase in the assets of the bank during the year 1916, namely, $55,000,000, which constituted an unprecedented record. This year I am pleased to say the increase is $82,000,000. It should be explained, however, that $20,000,000 of this was due to the acquisition of the Quebec Bank, and a further portion is of a temporary character.

The experience of the past year has fully demonstrated the correctness of the value which was placed on the assets of the Quebec Bank.

The year brought no cessation of the remarkable prosperity enjoyed by Canada since the beginning of the war. While munition orders fell off perceptibly, manufacturing activity was largely directed to shipbuilding. The demand for foodstuffs and war commodities continued to the extent of the country's ability to finance payments for same. Labor is now scarce and, in some cases, inefficient, and wages steadily ascending.

Following the action of the United States Government, the Canadian Government fixed the price of the 1917 wheat crop at $2.21 per bushel for No. 1 Northern at Fort William. This was the equivalent of the price fixed in the United States. At this price Great Britain purchased 150,000,000 bushels of wheat and also 20,000,000 of oats, approximating $350,000,000, and to assist in paying for same, $100,000,000 was borrowed for two years from the Canadian banks. The estimated wheat remaining in the country of 50,000,000 to 60,000,000 bushels will be required for domestic milling and seeding purposes. The sale of this large amount of cereals at phenomenal prices means riches to the farmers and a very substantial increase in bank deposits.

Last year I submitted a statement showing the prices of many commodities at the close of 1916. Much higher prices were recorded during the past year, but some of these relapsed with the United States Government's introduction of their fixed price policy. As Canada imports largely from the United States, we are directly affected by this policy, which should be more favorably received by trading interests, because of its tendency to stabilize the markets and reduce the cost of doing business, were it not for the embargo placed on the exportation of all raw materials without a license except for the production of munitions and war supplies. Widespread injury will result in this country if the prohibition be strictly enforced, especially in regard to coal. While we cannot complain, as we have similarly prohibited exports, it is hoped our Government will be able to arrange to secure outside such commodities for our general requirements as are inadequately produced in this country.

The Canadian Government have so far fixed the price of wheat and newsprint only. In fixing maximum prices, consideration must be given to the necessity of stimulating production.

With a view to the successful prosecution of the war, the Government of the United States are making another important departure in taking steps to bring about a gradual curtailment in the production of articles regarded as non-essential, and diverting the activities of factories, wherever possible, to the manufacture of war commodities. This may appear to be a drastic proceeding, but heavy sacrifices are necessary in order to win the war. The manufacture and importation of non-essential products into this country should be prohibited by the Government. So long as the war lasts, essential products will be in continued demand by the Allied Governments. We know that the end of the war does not seem to be near, and manufacturers should take advantage of this opportunity to speed up their plants to full capacity.

The recent Order-in-Council prohibiting the sale of new issues without a permit from the Minister of Finance, is a wise measure. The Government should go further and prohibit the investment of Canadian money in foreign countries, as it is highly important that the resources of the country should be conserved to produce the maximum of war time efficiency.

TAXATION PROBLEMS.

The income tax imposed last year, which becomes effective on the first of June this year, is a fair and proper tax under the circumstances, and it should not be objected to in its application. It will reach everyone who can afford to contribute. The business profits tax, however, is unduly onerous and repressive. It has had the effect of antagonizing capital and restricting production.

While we believe the Government's assumption of the powers mentioned is essential to the prosecution of the war and are in duty bound to give our full support, the extent to which the domestic life and liberties of the people are thus affected is a serious matter. Dictatorial powers once assumed are usually reluctantly relinquished, and if we could not trust the Government to annul them when the present purpose has been served, great evil would result.

We were greatly shocked at the recent frightful disaster in Halifax, and sympathize deeply with those who are afflicted by the loss of life, and with the maimed and suffering. This bank will never waver in its attachment to the city of Halifax, where it was founded in 1869, and in which city the Head Office was located for thirty-one years. About one-third of our shareholders reside in Nova Scotia, and the foundation of the bank's success was laid by my eminent predecessor, the late T. E. Kenny, and his associates in the direction of its affairs.

The entry of the United States into the war was the most momentous event of the past year. Her adhesion to the cause of the Allies spells ultimate victory, although some time will elapse before she can be prepared to strike with full force.

The war drags on, and the general feeling is that it will be considerably prolonged, but our stern task must be pursued to a successful end at whatever cost. We may depend upon it that still greater sacrifices will be necessary and that very heavy taxation must be entailed.

THE VICE-PRESIDENT.

In seconding the motion for the adoption of the Directors' Report, Mr. E. L. Pease, Vice-President and Managing Director, said:—

The excellent Statement which we have the pleasure of submitting to-day reflects the prosperity of the country, which has been in evidence since the war began. The subjoined Statement* shows that this has become even more marked during the past year.

While it is our opportunity and privilege to profit by this prosperity, it cannot but detract from our satisfaction to realize that it is due to the abnormal circumstance of the war, and that we are prospering at the expense of the Mother Country, which is the chief purchaser of our products. To the extent that our Government is assessing excess profits and assisting in the prosecution of the war, we are affording relief to Great Britain, but we should aim to prevent the making of large profits out of the war and to protect her from profiteering.

It is unfortunate that our prosperity lacks uniformity, as evidenced by a severe decline in the prices of securities, which has resulted in the establishment of minimum values on the Stock Exchanges, while the prices of commodities are the highest ever experienced. This anomalous situation is due to the absorption of liquid capital by the Government in order to carry on the war. As the standard industrials are very

prosperous, however, the recovery of values is only a question of time.

The growing appreciation of the people for Government war bonds as an investment is the most gratifying feature of the year. The recent campaign advocating economy and investment in Government bonds, will be productive of the greatest possible benefit to the country as a whole, and the habit of saving and investment, once formed, will persist and reward the individual.

During the past year the Dominion Government floated two domestic loans—one in March for $150,000,000, which was $100,000,000 over-subscribed, and another in December last for $150,000,000, which was $260,000,000 over-subscribed. In the first instance the Government allotted only the amount offered—$150,000,000, but in the last case they have accepted applications for $390,000,000. This sum is expected to provide for the Government's necessities until next autumn.

In addition, the Government floated in the United States in August last a loan of $100,000,000 payable in two years.

The Canadian banks made temporary advances to the Government during the year in anticipation of the emission of these loans, and also a loan of $75,000,000 in November last, having two years to run. They also granted to Great Britain in November a credit of $100,000,000 payable in two years, to assist her in the purchase of our cereals. When this latter credit is fully availed of, the obligations of Great Britain will amount to $200,000,000, of which $100,000,000 matures during the current year. These advances were made by the banks on a basis pro rata to paid-up capital.

BANKS IN STRONG POSITION.

While the Canadian banks have played a prominent part in financing the war, it is gratifying to find that the extent to which Canada and Great Britain are publicly indebted to them at the moment represents only 20 per cent. of their deposits, and will shortly be reduced to 15 per cent.; also that despite the outstanding direct loans to these Governments aggregating $325,000,000, and the domestic loans floated by the Dominion Government since the beginning of the war, which aggregate $350,000,000 (not including the last loan of $390,000,000), practically all of which came out of the banks, the Canadian deposits of these banks on the 30th of November last were $654,000,000 greater than in July, 1914.

The total deposits of the banks on the 30th of November last were $1,813,000,000, the increase for the year being $292,000,000, of which $172,000,000 represented savings deposits. The total current loans amounted to $1,010,000,000, being an increase of $82,000,000. Circulation increased $48,000,000.

The liquidity of the banks has been kept unimpaired in spite of the huge Government loans effected. This is due to the expenditure of the proceeds within the country.

Speaking for the Royal Bank, there never was a time when we were freer from doubtful debts than at present. Recoveries have been made to a remarkable extent in connection with advances of which ultimate repayment was regarded as doubtful three years ago. This is probably the experience not only of all the banks, but of merchants and manufacturers generally.

Liquidation has been very thorough, except in connection with advances depending upon the security of real estate; but with the improved financial condition of the farmers, and the engagement of Provincial Governments in Western Canada in the loaning business, interest and principal payments under farm mortgages all over the West have been well taken care of, and in a great many cases maturing loans have been paid in full. Generally speaking, the country districts are prosperous, and farm lands are in good demand. The situation in the cities has improved, as evidenced by the greater demand for and increased rentals of residences. City vacant lots show no improvement.

The British Government recently appointed a committee, with the following terms of reference:—

> "To consider, and report whether the normal arrangements for the provision of the financial facilities of trade, by means of existing banking and other financial institutions will be adequate to meet the needs of British industry, during the period immediately following the termination of the war, and, if not, by what emergency arrangement they should be supplemented, regard being had in particular to the special assistance which may be necessary:—
>
> "(a) To facilitate the conversion of works and factories, now engaged upon war work to normal production.
>
> "(b) To meet the exceptional demands for raw materials, arising from the depletion of stocks."

As conditions in Canada are somewhat parallel, and serious difficulties will confront us at the close of the war, it is our duty to endeavor to devise safeguards against them. The conversion of factories will involve increased capital outlay, and a period of unproductiveness must intervene. Present values of raw material will probably not decrease, in view of the world demand, and the necessity for re-stocking, will add to the financial strain. Many men will be thrown out of employment, and discharged soldiers will be returning. In addition, there will probably be a large immigration to this country.

We cannot foresee all the difficulties of finance that are likely to beset us. In my opinion, the question of providing supplementary banking facilities in this country is very important, and should receive the consideration of the Government and the banks. If we had a bank of rediscount patterned somewhat after the Federal Reserve Bank in the United States, it would render legitimately available millions of assets in the form of high grade commercial paper, now lying dormant in the portfolios of the banks, and thereby greatly increase our financial resources. I think the Government should appoint a committee of experts to investigate the suggestion.

I cannot close without a tribute of praise to Sir Thomas White, the Minister of Finance. The prosperity we are enjoying is due in great measure to his discovery and exploitation of the latent resources of the country, as exemplified by his repeated and increasingly successful offers of Government securities, culminating in the last huge domestic loan, and the profitable employment of these resources in the prosecution of the war.

I have pleasure in seconding the motion for the adoption of the Directors' Report.

OFFICERS' PENSION FUND.

A Resolution was adopted, authorizing the Directors to contribute to the Pension Fund, out of the profits of the bank, a sum not exceeding $100,000 per annum, for a period of five years.

AUDITORS.

Mr. J. Marwick, Mr. S. R. Mitchell and Mr. John W. Ross, were appointed Auditors for the ensuing year.

THE STAFF.

A vote of thanks was passed to the President, Vice-President and Directors, also to the General Manager and staff. In replying to the latter, Mr. C. E. Neill, General Manager, said:—

On behalf of the officials of the bank, and the staff in general, I thank you for this expression of confidence. While it is customary to extend the courtesy of such a vote each year, it never comes to us as a mere formality, since there seem to be new circumstances on every occasion to impart special significance to the familiar idea. In this instance, our thoughts have been much occupied of late with the retiring Superintendent of Branches, Mr. W. B. Torrance. There is no need for me to recall to you the main facts of his long banking career, which are widely known, or the very high esteem in which he is generally held, but I wish to take this opportunity of expressing our appreciation of his sterling qualities, and our regret that he is no longer one of us.

The success of the bank is dependent upon the rank and file of the staff to a much greater extent than the shareholders probably realize. We have a particularly loyal and efficient staff, and I can assure you that the thanks of the shareholders are deeply appreciated.

BOARD OF DIRECTORS

The following were elected Directors for the ensuing year:—

Sir Herbert S. Holt, K.B., E. L. Pease, E. F. B. Johnston, K.C., Jas Redmond, G. R. Crowe, D. K. Elliott, Hon. W. H. Thorne, Hugh Paton, Wm. Robertson, A. J. Brown, K.C., W. J. Sheppard, C. S. Wilcox, A. E. Dyment, C. E. Neill, Sir Mortimer B. Davis, K.B., G. H. Duggan, C. C. Blackadar, J. T. Ross, R. MacD. Paterson, G. G. Stuart, K.C.

At a subsequent meeting of the Directors, Sir Herbert S. Holt was unanimously re-elected President, Mr. E. L. Pease, Vice-President and Managing Director, and Mr. E. F. B. Johnston, K.C., second vice-president.

Nineteenth Annual Report

A Record of Achievement

Total Cash Income	$ 942,427.59
(Increase over 1916 of $233,965.71)	
Total Payments to Policyholders	245,212.26
Applications for new Assurances	5,001,612.00
Policies issued and placed	4,336,237.00
Total Business in Force	22,686,816.00
Annual Premiums thereon	777,854.97
Interest Earning, plus profits from Sale of Securities	181,393.96
(Increase over 1916 of $20,254.32)	
Paid Up Capital, Reserves and Surplus	3,781,263.15
Net Surplus	350,014.37

Points of Interest

1. The increase in actual Cash Receipts from Insurance Premiums and Interest Income for the year 1917 by way of comparison with the year 1916, as appears in the Government Blue Book, shows an increase of $233,965.71.
2. The Cash Interest Income for the year 1917 amounts to $181,393.96, an increase over 1916 of $20,254.32.
3. The Cash Interest Income was more than sufficient to meet all death claims occurring in 1917.
4. Increase in Assets for the year was $435,477.87.
5. No interest or principal is overdue or in arrears on any of the invested funds of the Company. This record has now been maintained for over 18 years.
6. Dominion Government, Provincial Government, City, Town, County, Village, Township and School Debentures, on which there are no arrears of interest or principal, are taken in the statement $109,498.70 below the par value.

LOANS ON LIFE POLICIES

They Often Lead to Surrender—Conservation of Business is Important

Referring to the decreased demand for policy loans last year, Mr. G. A. Morrow, president of the Imperial Life Assurance Company, at the company's annual meeting last week, said "that while on the one hand the policy loans are, from the company's standpoint, most desirable as an investment, since they combine a good interest yield with unquestioned security, yet on the other hand the mortgaging by the policyholder of the assurance taken out by him for his dependants seems a retrogression on his part, particularly when as is often the case, the facility with which these loans can be obtained leads him to have recourse to them where no real or adequate necessity exists." Mr. Morrow continued:—

"The legitimate purpose of these loans is to secure the continuation of the assurance by tiding the policyholder over a period of financial stress when other avenues of credit are closed. The abuse of the policy loan privilege consists in the policyholder drawing upon his policy for trivial purposes, lessening thereby the protection it affords, while at the same time adding the burden of loan interest to the premium payment—a combined result which all too frequently leads to the ultimate surrender of the policy."

Appreciation of Life Insurance.

While admitting that the present prosperity is due principally to the production of war supplies in Canada and is, therefore, likely to be in large measure transitory, Mr. Morrow said that "coincident with this prosperity, and like it a result of the war, has grown up throughout Canada a better knowledge of life assurance—a truer appreciation of its value—and this knowledge and appreciation will endure. For the war has made clear as never before," he added, "the economic value both to the homes and to the state of the productive lives in this country of great production; has made clear how large a part life assurance can play in protecting the value of these lives; and has made clear how seriously uninsured our people are."

Mr. Morrow expressed the opinion that conservation of old business is even more important than the production of new business. "For the only business any life company wants," he said, "is the business that builds up the company by remaining on its books, thereby furnishing proof that the growth of the company is resting on the solid foundation of satisfied policyholders. The gain made in total assurances in force is, therefore, one of the true measures of a company's progress."

Hopes for the Future.

Speaking of the general outlook, Mr. Morrow said:—

"Under present abnormal conditions it is impossible to predict with any degree of accuracy the outlook for the future. We must be prepared for some setback upon the termination of the war. A very heavy increase in our National Debt is inevitable, with consequent increased taxation. There will necessarily be an industrial readjustment when the manufacture of war material ceases.

"A greater agricultural production, the development of our vast national resources, the practical certainty of increased immigration after the war, and the practise of economy, will form the basis of our hope and confidence in the future."

EXPORT OF DAIRY PRODUCTS LAST YEAR

The annual report of the department of labor, recently issued, shows that during the last fiscal year the quantity of butter exported was 1,228,753 pounds, valued at $309,046. During the previous year the quantity exported was 7,990,453 pounds, valued at $2,491,922. Cheese was exported to the amount of 180,733,426 pounds, valued at $36,721,136. The aggregate value of butter, cheese, condensed milk and fresh cream exported from Canada during the year amounts, says the report, "to the fine total of $41,367,705, a sum which is $10,000,000 in excess of any previous year. If to this is added the value of milk, butter and cheese consumed at home, a reasonable estimate of which would be $140,000,000, the total production is $181,367,705." A convincing illustration of the argument that the best spur to increased production is found in high prices, says the report.

MONTREAL CLEARING HOUSE

In presenting his report at the annual meeting of the Montreal Clearing House last week, Mr. H. B. Walker, chairman, stated that a further great expansion had occurred in the volume of bank clearings, the total figures for 1917, which greatly exceed all previous records, being 12.5 per cent. over the high mark reached in 1916. The records for the day, week, month and year were all broken during 1917. From August, 1915, until October, 1917, each month's total clearings showed a large gain over the figures for the corresponding month of the previous year, but a decline was shown in November and December, doubtless due to the inactive conditions of the stock exchange which followed the adoption on October 30th of minimum trading prices for securities. The past year has been marked by great industrial activity and expanding foreign trade, with unprecedentedly high prices for all commodities. At the end of November the deposits of the chartered banks showed an increase of $225,000,000 as compared with November, 1916. Bank note circulation has reached a point which represents slightly over $26 per capita of population as against about $20 a year ago. All these evidences of prosperity are reflected in the increased volume of clearings.

At the suggestion of the manager, a second session, held each day at 1 p.m., for the purpose of clearing returned and miscleared items, was instituted in October last by the Montreal Clearing House. The plan has worked very satisfactorily, and has resulted in a considerable saving in time to the clearing banks.

ROYAL BANK OF CANADA

The Monetary Times has previously referred to the splendid balance sheet presented by the directors of the Royal Bank of Canada. This institution, which has made such rapid progress during the past few years, held its forty-ninth annual meeting at Montreal last week. Mr. C. E. Neill, the progressive general manager, pointed out at the meeting the many evidences of growth reflected in the balance sheet. The total assets of the bank are over $335,000,000 nearly double the amount at the beginning of the war. The increase during the past year was $82,000,000, a substantial gain. Of this increase, the Quebec Bank, which was absorbed on January 2nd, 1917, contributed approximately $22,000,000.

Total deposits amount to $252,987,382.81, the increase for the year being $52,759,787.23. A satisfactory feature is the absence of large or unusual deposits of a temporary nature.

A great expansion took place in circulation. Outstanding notes now exceed the paid-up capital by $15,247,651.49. To cover this excess $16,000,000 has been deposited in the central gold reserves. All the bank's securities have been written down to the present market value. A close analysis of the bank's balance sheet shows it to be in excellent financial condition, substantial progress having been made during the past year.

Mr. Neill added a timely warning to those of the other bankers, stating that in this time of great expansion "it is manifestly our first duty to keep the bank in a strong and liquid position, especially as regards cash, in order to be fully prepared for any contingency which may arise. The uncertainty as to conditions which will obtain after the war is very great, and we must be fully prepared for any eventuality."

Regarding post-bellum problems, Mr. E. L. Pease, managing director of the bank, expressed the interesting opinion that the question of providing supplementary banking facilities in the country was very important, and should receive the important consideration of the government and banks. Mr. Pease thought if Canada had a bank of re-discount, patterned somewhat after the Federal Reserve Bank in the United States, it would render legitimately available millions of assets in the form of high-grade commercial paper now lying dormant in the portfolios of the banks, and thereby greatly increase our financial resources.

The first and only claim thus far reported to the Equitable Assurance Society, of New York, as a result of the Halifax explosion is under a $1,000 policy on the life of William T. Broderick, who was killed by the steamship "Mont Blanc" explosion in Halifax harbor. The claim was received on December 18th, and a cheque payable to the insured's mother, the beneficiary, was mailed the same day.

DOUBLE INSURANCE WITHOUT NOTICE

Interesting Fire Insurance Trial Reviewed by Ontario Marshal

The following comment on a recent case of double insurance without notice, is made by Mr. E. P. Heaton, fire marshall for Ontario:—

Several other cases have been drawn to our attention of late. It seems beyond doubt that adjusters and other persons who take declarations from people generally are very careless in regard to the manner in which questions are put and answered by the declarant as well as being negligent in the language which they use when administering the Declaration. In many cases their whole mode of procedure in a solemn matter such as they are called upon to perform lacks seriousness and dignity and does not reflect any great credit upon the administration of justice in matters of that nature.

To avoid the miscarriage of justice, greater care must be exercised and proper instructions given where losses are placed in the hands of agents or those who are inexperienced and not qualified to properly adjust fire losses.

Judge's Charge to Jury.

The case of Rex vs. Dawson may be cited as an illustration. The trial was before His Honor, George E. Deroche, at Belleville, on December 11th. We quote the following excerpts from the judge's charge to the jury:—

"I will not go over the evidence very much with you because counsel for the Crown and counsel for the defence have covered it pretty thoroughly and I don't think I can add very much to it.

"There are four charges against this prisoner, two of them being in connection with the Caledonian Insurance Company, and two in connection with the Northern.

"The two in connection with the Caledonian are, he committed perjury by making a solemn declaration which was not true, that is, that there was no other insurance, no concurrent insurance, and the other charge in connection with the Caledonian is that he attempted to defraud the Caledonian Insurance Company by falsely representing that there was no other insurance.

"The only difference in the two is the oath part. That is, you might find that under the circumstances you didn't think he had taken this solemn declaration wilfully and corruptly deposing to what was not true, and yet you might be satisfied in your minds that he did sign that document in which he said he had no other insurance and on that signature hoped to get his insurance, and that would be the Crown's idea of attempting to defraud. . .

"In connection with the Northern Insurance there are two charges likewise of exactly a similar nature. . . .

"You may find him guilty of perjury in the Caledonian and not guilty of perjury in the Northern, and you may find him guilty of perjury in the Northern and not in the Caledonian, and you may find him not guilty of perjury in either one; or you might find him guilty of attempt to defraud in the Caledonian and not guilty in the Northern, or you might find him guilty of attempt to defraud in the Northern and not guilty in the Caledonian; or you might find him not guilty in either one; there are the four charges all hanging around two different acts, they are in pairs.

Did Contain Statement.

". . . . I think I can say to you safely in order to succeed in connection with the Caledonian insurance—that is, the Blair insurance—the one which was adjusted or signed by him or declared to by him, did contain that statement that there was no other insurance. Now the question is, did he know that was there when he signed it, or when he made his declaration, and if he knew it, did he wilfully and with intention to defraud the company, sign it; or did he wilfully and corruptly make his declaration to it; all those things you have to consider. It is not enough that he merely signed it when he made his declaration;

"Whether he knew that statement was there or not, depends on his evidence, the evidence of Mr. O'Rourke and the evidence of Mr. Blair. Mr. Blair says in Mr. O'Rourke's office that whole statement was read over to him and therefore he must have heard that one clause that was in it. The prisoner himself, Dawson, says it was not read over to him, and Mr. O'Rourke in his evidence says it was not read over in his presence; so there you have the evidence. . . .

"In regard to the other, the Northern, that was adjusted by Mr. Hurley, the same question arises there. There is no doubt about the statement being signed; there is no doubt he signed it and Mr. Hurley says he made his declaration to it; that it contained a clause that there was no other insurance. Again you have to ask yourselves the same question, when the man signed it or made his declaration to it, did he know that clause was there, and if so when he signed that false statement, did he do it wilfully and corruptly intending to defraud.

Did Not Know Company.

"On that, so far as the evidence is concerned, Mr. Hurley says it was read over to him—I think he said it was done by way of reading the questions to him and then when the insured gave him his answer, Mr. Hurley wrote the answers in. Dawson himself says it was not read over to him, it was bent over a book and he signed his name. He did not even know what insurance company it was. It is a question of which you believe.

". . . . Whittier says although he was not present when this was adjusted or signed, he does say that Dawson came to him for the insurance; he asked him if he had any other insurance and he said he hadn't. Whether that is true or not and whether Dawson was honest in it—I suppose Dawson's answer would be that he intended to cancel the other and that is why he said there was no other insurance. Then there is another feature too that ought perhaps to be pointed out from the prisoner's standpoint. He evidently wishes the court and jury to infer that he didn't know Mr. Hurley was representing a second insurance company, but thought it was the same insurance company, and so if he did know that statement was there that he was still signing the same statement he had signed in O'Rourke's office, and perhaps this ought to be pointed out, too, that the prisoner hadn't any policy at this time in the Northern and whether that might have been in his mind, even though he signed the statement for Blair before O'Rourke that there was no other insurance, whether he might in his mind have considered he hadn't his policy and therefore he hadn't any other insurance, and of course that would still obtain in his favor, if he believed Hurley was still acting in the interest of the same company.

Intended to Cancel.

"There are a good many things you will have to take into consideration; there are some little things, too; for instance, he paid his premium to each of these men, and although he says he intended to cancel the one insurance after he took the Whittier insurance—I suppose one has to apply their common sense to it whether it looks to be a reasonable transaction that he should effect an insurance on the 23rd of August with Mr. Blair and have his policy, and then go to Mr. Whittier on the 7th to effect another one intending to cancel this one which had been taken such a few days apart, particularly so when he had been to Mr. Whittier before and hadn't found him in and went to Mr. Blair and got his insurance and got his policy and then went to Mr. Whittier to get the other insurance. . . It seems clear he has never gone to either of these insurance companies to say—I don't expect my money from the other; he paid his premium to both, it still remains there; he has never gone to either of these companies; perhaps he overlooked it, didn't think it was necessary. . . .

"I don't know that I can add anything further. I will let you take these four charges in so you can bring in your verdict on each of them, guilty or not guilty, so there will be no confusion."

Result of Trial.

The result of the trial was, that the accused was found not guilty upon all four charges.

A mass of evidence was taken before Deputy Fire Marshal George F. Lewis at the investigation held in Trenton on October 1st, 1917. It appears from the evidence adduced that Dawson insured a house that he had just built in Trenton with W. H. Blair, local agent for the Caledonian, on August 23rd, 1917, for $800. Dawson came to Blair's house and asked to have the insurance placed on the dwelling. On August 10th, Dawson went to Whittier, agent for the Northern, but Mr. Whittier was out of town and didn't insure the property at that time.

Late in the afternoon of September 7th, 1917, Dawson went to H. F. Whittier, insurance agent, and placed $800 in-

surance on the dwelling house he had recently built, telling Whittier that there was no other insurance on the building. Whittier did not solicit the business. Dawson paid the premium and Whittier gave him a receipt, but not a regular interim receipt. Whittier's stenographer having gone home, he didn't make out the policy till next morning and then didn't deliver the policy.

The following morning (September 8th) Dawson came to Whittier's office and told him that the dwelling that he paid the insurance premium on was burnt up and made a demand for the insurance money in the ordinary way. Whittier said he would look after it and advised the insurance company who would arrange for adjustment of the loss. They had further conversations regarding the loss before the adjuster for the company arrived.

"No Other Insurance."

On the morning of the fire Dawson also went to Blair's house to inform him that the dwelling was burnt. On September 13th, Messrs. G. F. Turney and Blair acting for the Caledonian adjusted the loss on the building for $700, and Dawson swore that he had no other insurance.

On September 14th, Mr. T. J. Hurley, representing the Northern Assurance Company, arrived in Trenton and Dawson gave him a list of material, etc., that went into the building and claimed a total loss of about $1,100. Mr. Hurley never saw the building and had to rely on Dawson's statements. He adjusted the loss for $800 and Dawson swore that he had no other insurance. Dawson made out the statement of claim for loss between the time he adjusted with the Caledonian and the next afternoon when Mr. Hurley called.

In his evidence at the investigation Mr. Hurley stated that Dawson claimed the $800 insurance from the Northern; that Dawson couldn't help but see that he was adjusting for the Northern Insurance Company; that he was familiar with everything and that there was nothing to lead him to believe that he was adjusting on a basis of $800 a loss that was adjusted the day previous for $700.

As a result of the verdict it would appear that no liability in connection with the loss is attached to the Northern. An interesting question arises as to what is the liability of the Caledonian. Can the company claim that there was other insurance effected without notice and that it is only liable for sixty per cent. of the loss? asks Fire Marshal Heaton.

DOMINION STEEL CORPORATION'S OPERATIONS

Mr. Mark Workman, president of the Dominion Steel Corporation, stated in Montreal on Tuesday that the production figures for the past year were well up to the 1916 figures. As to coal production, Mr. Workman is not nearly so optimistic. He pointed out that since the outbreak of the war 4,500 have enlisted from the mines of the Dominion Coal Company, and while it is true that 1,000 of these men have been replaced, they have been replaced by less efficient labor.

The result of this demand upon labor has resulted in a marked falling off in the coal output from the mines, and the output for the year just closed was the smallest in many years, falling below the 4,000,000-ton mark Mr. Workman states that the 1917 output will fall half a million short of 1916, and 1,250,000 tons below normal. In 1914, which was considered a poor year, the coal output of the Dominion Coal Company was 5,200,000 tons.

The decline in the Cape Breton coal output has been felt at Montreal for some time, and just what this means to that coal market is evidenced from the statement of Mr. Workman that in ordinary times 2,000,000 tons of coal are shipped up the St. Lawrence annually. This year St. Lawrence shipments were practically nil.

The labor situation at Sydney is still in an unsettled condition, and Mr. Workman was informed recently that Senator G. D. Robinson had been sent to Cape Breton as a representative of the Dominion government to enquire into the question of wages and the possibility of providing more men with a view to increasing the output.

It is understood that strong action will be taken by the government with a view to increasing the output from the Cape Breton mines.

The Merchants Fire Assurance Corporation, of New York, has received a Dominion license to transact fire insurance in British Columbia. Mr. C. G. Hobson, of Vancouver, is chief agent.

ONTARIO'S VITAL STATISTICS

Population was 2,776,885 in 1916—Deaths from Organic Diseases

According to the annual report of vital statistics for Ontario, which will be issued shortly, the estimated population of the province for 1916 is 2,776,885 divided as follows: Cities, 36.72 per cent; towns, 5.76 per cent., and rural municipalities, 57.62 per cent. This is an estimated increase in the population for the year of 9,535, or .34 of 1 per cent. The increase in the population during the year 1914 was 2.62 per cent.; this fell to 0.63 per cent. in 1915 and again to .34 per cent. in 1916, and may be ascribed to the disturbed conditions of the country, owing to the great conflict in Europe.

The following table shows the number of birth registrations for 1916 and allows of a comparison between those of 1915 and 1916:—

	1916.	Ratio.	1915.	Ratio.
Entire province	65,264	23.5	67,032	24.2
Cities	26,938	26.4	27,283	24.8
Towns	4,687	29.7	33,862	30.0
Rural municipalities ...	33,639	21.0	35,887	22.1

The natural increase—i.e., births over deaths, was 19,684. The number of births decreased by 1,768 and the ratio per 1,000 of population by .7. The relation of male births to female births was as follows:—

	Male.	Female		M.	to	F.
Entire province	33,663	31,601	or	106	to	100
Cities	13,928	13,010	"	107	"	100
Towns	2,438	2,249	"	108	"	100
Rural municipalities ..	17,297	16,642	"	103	"	100

Deaths During Year.

The following table shows the number of deaths registered during the year and allows of a comparison with the registrations of the preceding year:—

	1916.	Ratio.	1915.	Ratio.
Entire province	35,580	12.8	33,294	12.0
Cities	14,287	14.0	13,080	12.8
Towns	2,609	16.5	2,053	15.9
Rural municipalities ...	18,684	11.7	18,161	11.2

It will be noted that the number of deaths has increased by 2,286, or 6.8 per cent. The ratio has increased by 0.8 per 1,000 of population. The ten causes of death from organic diseases giving the highest mortality in the province are shown, together with the death rate per 100,000 of population:—

		Ratio.
Organic heart diseases	3,335	120
Pneumonia	2,962	104
Tuberculosis	2,559	92
Cancer	2,012	72
Apoplexy	1,485	53
Infantile diarrhœa	1,218	44
Diseases of the arteries	1,204	43
Bright's disease	1,017	37
Bronchopneumonia	887	31
Paralysis without specified cause	598	21

Small Increase in Tuberculosis.

The rate of deaths from this disease in this year (1916) was 92 per 100,000 of population, being an increase of .03. The increase in the number was 93. The same ratio appeared in 1911, from which date there was a decrease till the lowest point was reached in 1913 and 1914 (85); there has been a slight increase in 1915 and 1916. The following is an analysis of rates in city, town and rural municipalities:—

	Deaths.	% of deaths from tuberculosis.	Ratio per 100 M of population.
Entire province	2,559	100	92
Cities	934	35.5	91
Towns	174	6.8	110
Rural municipalities ...	1,451	56.7	93

The Alliance Nationale has received a Dominion license to transact life, disability and sickness insurance to the extent authorized by its charter.

Consider the Cost

A FACT not generally understood by those drawing up a will, is that the highly specialized and competent service rendered by a Trusts Corporation costs no more than the uncertain service of an individual trustee.

When you consider that your estate will receive the benefit of experience gained in the management of many estates, your heirs will be assured the utmost protection.

When you make your will, why not insure efficient and economical management of your estate by appointing this Company as Executor and Trustee?

We make no charge for assisting in drawing up your will—and will store it in our Safety Deposit Vaults free, when we are named as executors.

An officer of the company will be pleased to give you full information and advise on wills.

SALE OF WOOL PRODUCED IN MANITOBA

The Manitoba department of agriculture and immigration estimates that about 60 per cent. of all the wool grown in the province was sold last year under its co-operative wool marketing scheme. The amount so marketed was over 170,000 pounds, of which 168,048 pounds was officially graded. The wool was sold at an average price of 58 cents per pound. The highest priced grade was fine medium comoing, which sold for the excellent price of 65 cents. The following is a statement showing the quantity of each grade sold:—

	Pounds.
Fine combing	8,860
Fine clothing	4,074
Fine medium combing	12,330
Medium combing	50,086
Medium clothing	9,629
Mohair	193
Coarse	69,198
Rejects	6,796
Gray and black	2,351

UNION BANK OF CANADA

Considerable progress has been made by the Union Bank of Canada during the past few years. The bank has capable and experienced officers in Mr. H. B. Shaw, general manager, and Mr. J. W. Hamilton, assistant general manager, a strong directorate and an influential advisory committee in connection with its New York agency, including such well-known American financiers as Messrs. Stuyvesant Fish, Cornelius Vanderbilt and Gilbert G. Thorne.

The results of the past year's operations were particularly gratifying to the directors, shareholders and clients of the bank. The increase in assets during 1917 was more than 13 per cent., bringing the total volume of its funds up to approximately $144,000,000. In the three years since the beginning of the war the volume of this bank's business has risen from $81,600,000 to $143,400,000. Deposits show a large increase. Liquid assets are over $77,000,000, or nearly 60 per cent. of public liabilities. Gold coin and Dominion notes amount to over $20,000,000. Profits for the year, while well in advance of 1916 and the years immediately previous, are moderate in proportion to the volume of business. They amounted to about $763,463 92, and are subject to a deduction of $225,000 for taxes, donations, pension fund and contingent account. After paying the regular dividend and bonus of 1 per cent. (which has been kept up throughout the war, together with all necessary appropriations for contingencies and depreciation, without going beyond the current profits), there remained a sufficient sum to write off $75,000 from bank premises and real estate and still make a small addition to the profit balance carried forward. This is an unusually satisfactory record, and the bank is to be congratulated upon the distinct improvement in its position.

Mr. John Galt, president of the bank, in the course of his address at the annual meeting, intimated that the bank would eventually be represented in each of the provinces in which it does a substantial business. Mr. Galt also made the announcement that in future the shares of the bank would be definitely on a 9 per cent. basis, and that the dividends would be 2¼ per cent. quarterly.

The number of directors was increased from sixteen to twenty. Messrs. A. Hitchcock, of Moose Jaw, and W. H. Malkin, of Vancouver, were chosen as directors. At a meeting of the directors, held subsequently to the annual meeting, the officers of the bank were re-elected as follows: Messrs. John Galt, Winnipeg, president, and G. H. Thompson, Quebec, and R. T. Riley, Winnipeg, vice-presidents.

The net surplus of the province of Quebec for the past year was $138,440. Hon. Walter Mitchell, provincial treasurer, announced this in the budget speech yesterday. The ordinary revenue of the province was $10,441,113, while the ordinary expenditure was $9,907,678, leaving a surplus of $533,440. The affairs of the province of Quebec being in such a prosperous state, Mr. Mitchell deducted from his revenue account, $375,000, a part of the million dollar grant to the Canadian Patriotic Fund, which the province of Quebec voted at the previous session.

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the month ended December 31st, 1917:—

Penn Canadian Mines, 55,761; Tretheway Silver Mines, 41,521; Aladdin Cobalt Mines, 87,000; National Mines, 67,179; Dominion Reducing Company, 655,500; Kerr Lake Mining Company, 120,394; McKinley-Darragh-Savage Mining Company, 338,204; La Rose Mines, 167,317; Buffalo Mines, 329,958; Coniagas Mines, 330,295; Nipissing Mining Company, 175,077. Total, 2,368,206 pounds, or 1,184 tons.

NOTE CIRCULATION OF THE BANKS

The note circulation of the banks as a whole has broken all previous records, said Mr. T. F. How, general manager of the Bank of Toronto, at the annual meeting of that bank this week. The total on November 30th last was $196,135,810. If to this is added the Dominion notes in the hands of the public, which probably amount to $26,000,000, the note circulation of the country will amount to over $242,000,000. If our population be estimated at 7,500,000, it represents a per capita circulation of about $32, as compared with $23 last year. It is not easy to fully account for this large increase, but some reasons may be found in the higher level of prices, making it necessary for everyone to carry more money to meet daily requirements. The larger volume of trade, as represented in money, also requires additional circulation. Two $5 bills are now required to pay the producer for five bushels of wheat, whereas previous to the war one $5 did the same work, and so all along the line.

FINANCES OF QUEBEC PROVINCE

According to figures given by Hon. Walter Mitchell, provincial treasurer, in the Quebec House last week, the funded debt on October 31st, 1916, was $38,846,128, less $1,507,842, of sinking fund. During 1916 loans issued were for $4,000,000 10-years at 99.20, interest 5 per cent., payable half-yearly, and one of $740,000 for 30 years at par, interest 4½ per cent., payable half-yearly. This latter loan is for the St. Maurice River water storage.

The provincial treasurer said that the available assets of the province were $11,702,800; direct liabilities, $42,021,779, making the excess of liabilities over the assets $30,318,978.

Mr. Mitchell also stated that of the $1,000,000 subscribed to the Victory Loan, $567,500 had come out of revenue fund and $432,500 out of sinking fund. During the past year the city of Montreal paid the province $39,602, and the balance of the municipalities in the province paid $202,624. These amounts are for the municipalities' share of the care of asylums and other such matters.

WAR INDUSTRIES BOARD SUGGESTED

The creation of a War Industries Board was urged upon the government on Tuesday by a delegation representing the Canadian Manufacturers' Association. Such a board, the government was informed, had become necessary in view of the greater difficulties encountered by Canadian manufacturers in securing raw materials from the United States since the entry of the United States into the war. It was suggested that the board should consist of, say, five members, whose duty it would be to collate and co-ordinate the needs of Canadian industries. The board would be assisted by sub-committees representative of the various industries involved and composed of expert men.

Mr. S. R. Parsons, Toronto, president of the Canadian Manufacturers' Association, said it was felt that difficulties now encountered would be increased as the United States continued its war work unless some steps were taken to meet the situation. Mr. W. W. Butler, of Montreal, argued that one of the first things the government should do was not merely to conserve, but to develop resources in the manufacture of raw material.

Hon. A. K. MacLean asked whether the whole question was one of acquisition of raw material, which can only be secured from the United States. "Very largely," Mr. Parsons replied. In reply to a question by Sir Thomas White, Mr. Parsons said that the question of prices had also sorely entered into the difficulties.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Trethewey Mining Company.—The shareholders have decided to purchase a controlling interest in the Castle Mining Company. The interest in this property was offered to the company as a means of prolonging its lease of life. It was pointed out that the production of the Trethewey for the next two years would provide the funds necessary to carry on this work.

Brompton Pulp and Paper Company.—At the annual meeting of shareholders held on January 15th, it was announced that the company had acquired on a very reasonable basis two American concerns, the Claremont Paper Company, of Claremont, New Hampshire, and Wyman, Flint and Sons Company, of Bellows Falls, Vermont. No new financing will be necessary to complete the transactions.

West Kootenay Power and Light Company.—The company, which is controlled by Consolidated Mining and Smelting, paid the parent company $150,000 in dividends last year. This compares with $83,333 in the preceding fiscal year. A contract has been made with the Northport Smelting and Refining Company to supply a maximum of 1,500 horse-power for a term of years and with the Canada Copper Corporation to supply a maximum of 5,000 horse-power for ten years.

The net profits for the year ending August 31, amounted to $30,930, as compared with $70,827 for 1916. This was, however, after writing off $99,736 for plant depreciation and providing for dividend on preferred shares and dividend on common shares of $182 666. The profit and loss account, compared with 1916, is as follows:—

	1917.	1916.
By balance brought forward	$402,467	$331,640
Net profits	30,930	70,827

Shawinigan Water and Power Company.—Shareholders have received notice as to exercising their rights to subscribe to the new issue of two-year 6 per cent., convertible notes. It is announced that a subsidiary plant engaged in the manufacture of certain chemicals for the British government has had its contracts extended for the entire year 1918. The extent of this chemical enterprise, which was taken up in the summer of 1916, is indicated by the fact that the plant involved the expenditure of about $1,800,000 by the company. Two existing plants had to be enlarged to provide certain necessary facilities for the new one. The construction of the storage dam at the head of the St. Maurice, which will increase the existing water power at the low stage of the river fully 50 per cent., involved an expenditure of $2,000,000. The company's subsidiary, which carried out the contract, is being paid by bonds of the Quebec government.

The private bills committee of the Quebec legislature has approved the application of the company for an increase in its capital issuing power by $5,000,000 from $15,000,000 to $20,000,000. This step was approved by the shareholders several weeks ago, and it was announced that no fresh capital issue is intended at this time.

Consolidated Mining and Smelting Company.—The main achievement of the year was the production of 10.000 tons of pure zinc of a value of $3,000,000, which marks a definite stage in the metallurgical history of the country. The company increased its production of refined lead by 2,000 tons to 22,000 tons, doubled its capacity for the production of sulphuric acid, and made a new record by producing over $13,000,000 worth of metals. After writing off $1,028,000 for depreciation of plant and equipment and development of properties, against $876,000 charged against these accounts in the 1916 year—included in the charge for depreciation is $450,000 written off the zinc plant, which for a certain time was in an experimental stage—the net profit was $1,076 828, against $996,496 in 1916. Depreciation charges were, therefore, about $162,000 more, and the increase in profits was $80,000. The company's net after depreciation, however, closely approximates its increased dividend requirement, the surplus after payments of $995,012 to the shareholders being $81,816.

The results for the three years in amounts written off for depreciation and development, net profits, dividends and profit and loss surplus compare as follows:—

	1917.	1916.	1915.
Depreciation ..	$ 648,058	$ 278,368	$ 193,149
Development ..	380,071	598,745	......
Net profits	1,076,828	996,496	795,411
Dividends	995,012	776,337	464,398
Profit and loss ..	2,360,274	2,278,458	2,050,209

The balance sheet as of September 30 shows a small reduction in bank loans and overdrafts from $2,288,000 to $2,081,000. The overdraft was due to an unusual accumulation of ores in anticipation of the needs of the Imperial Munitions Board, for advances towards the cost of additions to the zinc plant, which advances are repayable out of zinc produced, increased by $100,000 during the period to $769,000. Accounts payable were reduced, but the company's dividend requirements, occasioned by the increase in capital of $2,000,000 in 1916, increased by $219,000. Ores and metals on hand on September 30 were almost the same as at the end of the previous period being $2,615,000, against $2,682,000.

Mr. James J. Warren, managing director of the company, is in Montreal this week, consulting with officials of the Canadian Pacific Railway Company, who control the company. In an interview, he stated that the previous fiscal year of the company was a trying one, not only as regards labor, coal and other difficulties, but also in getting the various new enterprises that had been undertaken into working shape; this has now been accomplished, and the labor question has now been fought out through a strike which was settled on the company's own terms. He is looking forward to the current year with confidence. The company has been conserving its Rossland gold ores, and have been also acquiring other properties of a similar nature with a view of preparing for the future during peace times. Mr. Warren stated that the control of the West Kootenay Power and Light Company's plant enables them to work on an economical basis properties which were heretofore abandoned, particularly in the McKim and Fairview camps. The company had constantly in view the acquiring of other properties, so that it would establish a permanent enterprise in British Columbia.

BANK CLEARINGS

The following are the bank clearings for the weeks of January 11th, 1917, and January 12th, 1918, respectively, with changes:—

	Jan. 12, '18.	Jan. 11, '17.		Changes.
Montreal	$ 81,126,216	$ 77,295,725	+	$ 3,830,491
Toronto	64,395,261	63,347,095	+	1,048,166
Winnipeg	46,670,378	39,296,273	+	7,374,105
Vancouver	9,521,322	6,676,371	+	2,844,951
Ottawa	6,008,899	4,735,868	+	1,273,031
Calgary	7,981,649	4.654,226	+	3,327,423
Hamilton	5,325,504	4,907,180	+	418,324
Quebec	4,139,220	3,646,027	+	493,193
Edmonton	4,619,571	3,044,018	+	1,575,553
Halifax	3,918,930	3,354,896	+	564,034
London	3,203,418	2,428,671	+	774,747
Regina	4,317,261	3,040,875	+	1,276,386
St. John	2,517,818	2,002,859	+	514,959
Victoria	1,877,407	1,532,701	+	344,706

Sherbrooke	722,032	570,872	+	151,160
Kitchener	621,417	604,423	+	16,994
Totals	$255,346,126	$228,288,406	+	$27,057,126

The Toronto bank clearings for the current week are $57,197,375. compared with $56,064,523 for the same week in 1917, and $44,525,524 in 1916.

The Northern Crown Bank

Report of the Proceedings of the Twelfth Annual General Meeting of Shareholders

Held at the Banking House, Winnipeg, on Wednesday, 9th January, 1918.

The Twelfth Annual General Meeting of the Shareholders of the Northern Crown Bank was held at the Banking House, Winnipeg, on Wednesday, January 9th, 1918, at 12 o'clock noon.

There were present: Capt. Wm. Robinson, John Stovel, R. J. Macpherson, J. S. Douglas, E. F. Hutchings, Geo. Fisher, John Body (Sanford, Man.), S. S. Cummins (New York, N.Y.), H. Keech (Stony Mountain, Man.), J. N. Hutchinson, M.D., W. A. Cockshott, Jas. Leslie, H. W. Dearman, L. O. Barr, Sir Daniel H. McMillan, K.C.M.G., F. W. Sprado, O. Montgomery, D. A. McArthur, J. A. Thompson and others.

Upon motion by Mr. John Stovel, seconded by Mr. Geo. Fisher, the president, Capt. Wm. Robinson, took the chair.

It was then moved by Mr. E. F. Hutchings, seconded by Mr. Geo. Fisher, that Mr. R. Campbell, the general manager, act as secretary for the meeting, and that Messrs. R. J. Macpherson and Dr. J. N. Hutchinson act as Scrutineers.

The President called upon the Secretary to read the Annual Report as follows:—

THE REPORT.

The Directors of the Northern Crown Bank beg to submit to the Shareholders the Twelfth Annual Report showing the result of the Bank's business for the year ended November 30th, 1917, together with the usual Statement of Assets and Liabilities as at that date.

ANNUAL STATEMENT TO SHAREHOLDERS AS AT THE CLOSE OF BUSINESS ON 30th NOVEMBER, 1917.

LIABILITIES.

Capital Stock paid in		$ 1,429,447.10
Rest		715,600.00
Profit and Loss Account		204,612.93
Dividends Declared and Unpaid		36,707.38
		$ 2,386,367.41
Notes of the Bank in Circulation	$ 3,854,322.55	
Deposits not Bearing Interest	11,016,605.09	
Deposits Bearing Interest, including interest accrued to date of statement	14,286,666.24	
Balances Due to other Banks in Canada	1,092.03	
Balances due to Banks and Banking Correspondents in the United Kingdom and Foreign Countries	7,219.01	
Acceptances Under Letters of Credit	46,949.76	
Liabilities not included in the foregoing	4,002.05	
		29,216,856.73
		$31,603,224.14

ASSETS.

Current Coin held by the Bank		$ 182,552.86
Dominion Notes held		1,567,304.75
Notes of other Banks		262,586.95
		$ 2,012,444.56
Cheques on other Banks	$ 2,645,116.17

Railway and other Bonds, Debentures and Stocks, not exceeding market value	174,750.85	
Call and Short (not exceeding thirty days) Loans in Canada on Bonds, Debentures and Stocks	281,695.00	
Deposits with the Minister for the purpose of the Circulation Fund	75,500.00	
Deposit in the Central Gold Reserves	2,600,000.00	
		$19,823,582.80
		$21,836,027.36
Other Current Loans and Discounts in Canada (less Rebate of Interest)	$ 7,720,416.77	
Capital Stock and Bonds in Subsidiary Company holding Bank Premises	1,250,000.00	
Liabilities of Customers under Letters of Credit as per contra	46,949.76	
Real Estate other than Bank Premises	24,250.63	
Mortgages on Real Estate sold by the Bank	87,831.69	
Overdue Debts, estimated loss provided for	184,666.49	
Bank Premises (fittings, furniture and fixtures) at not more than cost, less amounts written off	353,814.98	
Other Assets not included in the foregoing	99,266.46	
		9,767,196.78
		$31,603,224.14

WM. ROBINSON, president.
R. CAMPBELL, General Manager.

REPORT OF THE AUDITOR TO THE SHAREHOLDERS OF THE NORTHERN CROWN BANK.

In accordance with the provisions of sub-sections 19 and 20 of section 56 of the Bank Act, I report as follows:—

I have audited the Balance Sheet with the Books at the Head Office and the certified returns from the Branches.

I have obtained all the information and explanations that I have required and am of the opinion that the transactions of the Bank, which have come under my notice, have been within the powers of the Bank.

I have checked the cash and verified the securities representing the investments of the Bank at its offices in Winnipeg, at November 30th, in addition to another date at Winnipeg, Vancouver, and Toronto, and find that they are in agreement with the entries in regard thereto in the books of the Bank.

The Balance Sheet is properly drawn up so as to exhibit a correct view of the state of the Bank's affairs, according to the best of my information and the explanations given to me, and as shown by the books of the Bank.

A. A. BENTON,
(Of the firm of Marwick, Mitchell, Peat & Company,
Chartered Accountants),
Auditor.

STATEMENT OF THE RESULT OF THE BUSINESS OF THE BANK FOR THE YEAR ENDED 30th NOVEMBER, 1917.

The Balance at Credit of Profit and Loss Account on 30th November, 1916, was		$132,954.86
Net Profits for the year ended 30th November, 1917, after deducting expenses of Management, and making full provision for all bad and doubtful debts		208,608.08
		$341,562.94
Appropriated as follows:—		
Dividend No. 17, payable 2nd July, 1917, at 5 per cent. per annum	$35,729.54	
Dividend No. 18, payable 2nd January, 1918, at 5 per cent. per annum	35,736.82	
War Tax on Bank Note Circulation to 30th November, 1917	14,291.89	
Written off Bank Premises	25,000.00	
Reserved for Depreciation of Stocks and Bonds	26,191.76	
		$136,950.01
Balance carried forward at credit of Profit and Loss Account		$204,612.93

WM. ROBINSON, President.
R. CAMPBELL, General Manager.

Since the last annual meeting of the following branches of the Bank have been opened:—Steinbach, Manitoba; Dunblane, Portreeve, Scotsguard and Kenaston in Saskatchewan. No branches have been closed.

Mr. A. A. Benton, of Messrs. Marwick, Mitchell, Peat & Company, and Mr. Douglas Dewar, of the same firm, have again been nominated for re-election as joint auditors of the Bank.

The Directors regret to announce the resignations of Sir D. H. McMillan, K.C.M.G., and Mr. J. H. Ashdown; the former on account of his inability to give, as President, the necessary attention to the affairs of the Bank owing to his intended absence from Winnipeg for prolonged periods, the latter on account of having been elected a director of the Bank of Montreal. The vacancies caused by their resignations have been filled by Mr. Geo. Fisher and Mr. H. J. Symington.

In moving the adoption of the report, the President, Capt. Wm. Robinson, said:—

PRESIDENT'S ADDRESS.

The figures of the statement that has just been read to you by the General Manager speak eloquently for themselves, and make my duty to-day a pleasant one.

The general financial situation has been so widely discussed that it is familiar to all, and comment by me at this time would be superfluous. I shall, therefore, confine my remarks to matters that directly affect ourselves.

The progress of the bank for the past two years has exceeded our most sanguine expectations. Two years ago I could not have conceived it possible that the bank could make such a rapid recovery. Good crops and high prices have contributed largely to this result, and there is every reason to hope that these conditions will continue.

The action of the United States government in fixing a minimum price of $2 for wheat for 1918, and the scarcity of hogs, cattle, and food stuffs of all kinds, would indicate that high prices will be maintained at least until the end of the war, and probably for some time afterwards.

You will observe that the assets of the Bank have now reached the considerable sum of $31,603,224, showing an increase of $11,304,377 since 30th November, 1915, and an increase of $7,573,958 since 30th November last year. This is, of course, due to the increase in deposits, which now stand at $25,303,271, as against $10,378,172 in August, 1915, and $18,385,000 at 30th November, 1916. An increase of approximately $15,000,000 in a little over two years, and $7,000,000 during the past year.

The Bank is in a much stronger position than ever before, immediately available assets being $21,836,027, which includes $2,600,000 in the Central Gold Reserves. This is 74.85 per cent. of the Bank's liabilities to the public and 86.21 per cent. of its total deposits. The rest and undivided profits now amount to $920,312.

It will be noted that we have contributed largely to war issues of the Dominion and Imperial governments, and that we are now carrying $11,587,000 of these securities. I may add that all but $2,211,000 of these investments are on short terms, maturing in 1918 and 1919.

Our Current Loans are slightly lower than we should like to see them, but I would point out that owing to the nature of our business a large proportion of our loans are paid off in full in the fall of the year from proceeds of crop. Now loans will be made during the year to replace those paid off in this way, and we expect our funds to be fully employed.

Profits for the year were $208,608, as compared with $128,761 last year, an increase of $79,846, the percentage being 9.72 of our combined capital and reserve. I hope these results will appeal to you as satisfactory. We expect that profits will continue to improve.

Early in the year Sir Daniel McMillan found it necessary to resign from the presidency and directorate of the Bank, owing to his inability, on account of prolonged absences from Winnipeg from time to time, to give the necessary attention to its affairs, and later on Mr. J. H. Ashdown resigned from the Board owing to his having accepted a position on the directorate of the Bank of Montreal. During their term of office both these gentlemen rendered most valuable services to the Bank. Their experienced counsel and mature judgment will be greatly missed. They will, however, continue to take a deep interest in the Bank's affairs, and to use their influence in its behalf.

The vacancies caused by these resignations have been filled by Mr. Geo. Fisher and Mr. H. J. Symington, who are well known to you, and whose services we have been fortunate to secure.

Reviewing the operations of the Bank generally for the past two years, we may congratulate ourselves upon what has been accomplished, and the position we now find ourselves in. Increased resources have enabled us to take up our full allotment of loans made to the government by the banks for the purpose of financing the war, and on more than one occasion to take considerably more than was expected of us. We have at the same time always been in a position to amply supply the needs of our clients.

Our funds are now safely and profitably invested, and owing to the liquid nature of a large proportion of our loans, we are in an excellent position to take up any new business of a desirable character that may be offered to us.

During the past year we have secured some valuable accounts and more will no doubt follow.

The Victory Loan and future war loans may to a certain extent retard the growth of our deposits, but on the other hand there is a considerably increased acreage ready for seeding throughout the country which should, with even an average crop, yield sufficient returns for all requirements.

We begin the year with bright prospects, and look forward confidently to continued prosperity. It is to be hoped that our shareholders, both east and west, will assist us by using their influence to turn business in our direction. The Bank is their Bank, and there should be a great future for it.

I regret that Messrs. A. McT. Campbell and W. R. Bawlf were unable to be present this year. Mr. Campbell is attending the annual meeting of the Canada Life Assurance Company in Toronto on the 10th inst., and Mr. Bawlf was called to Ottawa to attend a meeting of the Board of Grain Supervisors to-day.

Before closing my remarks I wish to pay a tribute to those of our staff who are serving their country in the various war theatres. Many of them have been wounded, and some have, unhappily, been killed in action. We owe a debt of gratitude to these brave men.

I move that the report be adopted.

The adoption of the report was seconded by the vice-president, and after a few remarks by Sir Daniel McMillan, and the passing of the usual resolutions, the following directors were elected for the year:—

Capt. Wm. Robinson, A. McT. Campbell, E. F. Hutchings, John Stovel, Geo. Fisher, Sir. D. C. Cameron, W. R. Bawlf and H. J. Symington.

At a subsequent meeting of the board of directors Capt. Wm. Robinson was re-elected president and Mr. John Stovel vice-president.

CONTINENTAL INSURANCE CO. OF NEW YORK

One of the oldest and strongest fire underwriting corporations on this continent, the Continental Insurance Company of New York commenced business in Canada in 1910, having obtained its Dominion license in November of that year. The company was incorporated in January, 1853, and has its head office in New York. Its authorized, subscribed and fully paid-up capital is $10,000,000. At the beginning of last year, its total gross assets exceeded $34,000,000, which included an excess deposit of $29,923 in Canada. The company then had reserves of over $10,135,305 for unearned premiums, $975,732 for losses and all claims; $100,000 for contingencies; and $600,000 for dividend. The policyholders' surplus was $22,303,334. At the end of 1916, it had $40,493,303 of business in force in Canada. Its head office for Canada and Newfoundland is at Montreal where Mr. W. E. Baldwin, a careful and capable underwriter, is manager. This company writes only fire insurance in Canada and should not be confused with the Continental Casualty Company of Chicago which is operating in British Columbia

NORTHERN CROWN BANK

In keeping with the experience of Canadian banks generally, the Northern Crown Bank, which has its headquarters at Winnipeg, experienced a good year. The deposits of this Western institution have doubled since the war commenced. They total $25,303,271 as compared with $10,378,172 in August, 1915. During the past year, total deposits increased approximately $7,000,000, and during the past two years the increase was $15,000,000. Another strong feature of the financial statement for the year ended November 30th last, presented to the shareholders at the twelfth annual meeting last week, is the position in regard to assets. The immediately available assets are $21,836,027, which includes $2,600,000 in the central gold reserves. This is 74.85 per cent. of the bank's liabilities to the public and 86.21 per cent. of its total deposits. The rest and undivided profits now amount to $920,312.

The total assets now reach the substantial sum of $31,603,224, showing an increase of $11,304,377 since November 30th, 1915, and an increase of $7,573,958 since November 30th last year. This is due to the increase in deposits noted above. The Northern Crown Bank has contributed largely to war issues of the Dominion and Imperial governments, and is now carrying $11,587,000 of these securities. All but $2,211,000 of these investments are for short terms, maturing in 1918 and 1919.

The bank's current loans are comparatively low, but, owing to the nature of its business, a large proportion of the bank's loans are paid off in full in the fall of the year from proceeds of crop. New loans will be made during the year to replace those paid off in this way, and the officials of the bank expect their funds to be fully employed.

Profits for the year were $208,608, as compared with $128,761 last year, an increase of $79,846, the percentage being 9.72 of the combined capital and reserve. This is a gratifying record. Captain Robinson, president of the bank, in reviewing the operations of the past year, stated that the funds of the institution are now safely and profitably invested, but owing to the liquid nature of a large proportion of the loans it is in an excellent position to take up any new business of a desirable character that may be offered. During the past year the bank has secured some valuable accounts.

A comparison of the annual statements of the Northern Crown Bank for the past three years shows a substantial improvement in its position. Captain Robinson admitted at the recent meeting that the progress of the institution during 1916 and 1917 had exceeded the directors' most sanguine expectations. Two years ago he could not have conceived it possible, he said, that the bank could make such a rapid recovery. Good crops and high prices have contributed largely to this result. The Northern Crown Bank is now benefiting from the combination of courage and caution displayed at the reorganization of its affairs a few years ago. Mr. R. Campbell is the general manager of the institution, and has worked zealously to help bring about these results. He is supported by a strong and influential directorate.

The forestry branch will be equipped with sufficient hose for all vessels employed on waters in the forestered areas, said Mr. Zavitz, Ontario provincial forester, in his address before the Toronto Insurance Institute on Thursday. Last season's progressive operations led to the erection of 62 lookout towers which, with the field telephone service, will revolutionize the old patrol system.

DEBENTURES FOR SALE

WALKERVILLE, ONT.

DEBENTURES FOR SALE

SEALED TENDERS, addressed to the undersigned, and marked on the outside, "TENDERS FOR DEBENTURES," will be received up to noon of FRIDAY, the 25th day of January, 1918, for the purchase of the following debentures and accrued interest:—

$25,000.00 Canadian Patriotic Fund. Payable in 9 instalments with interest at the rate of 6% per annum. First payment collected.

$38,000.00 Walkerville Hydro-Electric System. Payable in 25 instalments with interest at the rate of 6% per annum.

$18,312.42 Local Improvements 9 instalments 6%. First payment collected.

$10,332.95 Local Improvements 10 instalments 6%.

All debentures bear interest from December 14th, 1917, and have interest coupons attached. The principal and interest payable at the Canadian Bank of Commerce, Walkerville, on the 14th day of December in each year

The highest or any tender not necessarily accepted.

ALFRED MIERS,
Town Clerk.

Walkerville, Ont., January 18th, 1918.

DIVIDENDS AND NOTICES

THE MONTREAL CITY AND DISTRICT SAVINGS BANK

The Annual General Meeting of the Shareholders of this Bank will be held at its Head Office, St. James Street, on Monday, the Eleventh day of February next, at 12 o'clock noon, for the reception of the Annual Reports and Statements, and the Election of Directors.

By order of the Board.
A. P. LESPERANCE,
Manager.

Montreal, January 9th, 1918.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

THE STORY OF A YOUNG FINANCIAL MAN'S SUCCESS.—A financial man, thirty-three years of age, came to our office four years ago to take up a new line of business—a line against which he had been prejudiced, but which he knew carried great rewards for the successful. His average commissions this year will be over $5,000.00, and he has built up a future income of over $3,000.00 a year on business already written. We are enlarging our organization to prepare for an enormous expansion of business during the next few years. We have positions for two good men with successful records. This offer will be open during the next week. Only applicants of unquestioned integrity and with the highest references will be considered. W. A. Peace, Manager Toronto Branch, Imperial Life Assurance Company, 20 Victoria Street, Toronto.

PUBLIC ACCOUNTANT is desirous of relinquishing practice on own account and joining the staff of a good live concern; chartered secretary of joint-stock companies, capable, experienced manager and systematizer, married, not eligible for military service; can arrange to transfer practice instanta if necessary. Box 139, *The Monetary Times*, Toronto.

WANTED.—Position as Inspector with Tariff Fire Company. Nine years' experience; age 30, married. Well known in Western Provinces. Apply Box 109, *Monetary Times* office, 1208 McArthur Building, Winnipeg.

QUEBEC AND SECURITIES REGULATION

Provincial Treasurer Says Order is Encroachment of Provincial Rights—Montreal Attorney's Views

While the Dominion government's restriction on provincial borrowings brought an official protest from the government of Quebec, a reply made by Hon. Walter Mitchell, provincial treasurer, in the legislative assembly, which resumed its deliberations on January 8th, indicates that the order-in-council will not have any practical effect on the province's financial dealings. Replying to Mr Sauve, leader of the Opposition, as to whether it was the intention of the government to make any loans this year, the provincial treasurer answered "No."

In his budget speech Mr. Mitchell maintained that the federal order was an encroachment of provincial rights. "What we want is unity of effort and co-operation," he said. "We are willing to help to the full measure of our resources, conducted with full knowledge of all the facts and circumstances, but all within our respective rights and constitutional authority.

"There is no controversy between the Canadian government and ourselves as to the advisability of the control of borrowing. Credit should be saved as much as anything else. Conservation of credit is all essential. We have not only advised this since the beginning of the war, but, what is more, have practised it."

City Attorney's Views.

City Attorney Laurendeau, who was formerly a judge of the Superior Court, in a written opinion, informed the Montreal city council this week that he regarded the recent Federal order-in-council by which provinces and municipalities would require to have the consent of the minister of finance before raising loans, as unconstitutional and contrary to the British North America Act. Finally, added the city attorney, when the time came for the city to enter the money market, it would be opportune to resolve whether or not the Federal order should be ignored.

The city attorney stated that he had been asked by the council whether the Federal government could intervene in the administration of the affairs of the municipalities. By a decree of December 22, the Federal government declared it would be illegal for the Provincial government or corporations to sell, offer for sale, bonds, obligations, or other values attesting the obligation to reimburse a loan of money unless this offer of sale should be previously authorized by the minister of finance.

The city attorney declared that the Quebec provincial government had, by a decree of January 5, announced the opinion that the Federal government had not the power to pass the order-in-council of December 22, that the order-in-council is illegal and unconstitutional, and was not binding in any fashion on the province.

Says Does Not Bind City.

In conclusion the city attorney says: "If the Federal order-in-council is illegal and unconstitutional and does not bind the province, neither does it bind the city of Montreal. We are also of the opinion the order-in-council of the Federal government of December 22, encroaches on the rights of the province, that the parliament of Canada had not the power to adopt it, nor to delegate to the government of Canada the power to adopt it, that the power exercised by the Federal government by its order-in-council of December 22, belongs exclusively to the provinces, by virtue of the British North America Act of 1867. If the city of Montreal is under the necessity to raise loans referred to by the order-in-council of December 22, it will be for the city authorities to decide if this order-in-council should be ignored."

United States Follows our Example.

Advices from Washington State that legislation is being drafted under the direction of the United States administration which would authorize the treasury department to license each issue of securities considered essential for the conduct of the war and to refuse approval to enterprises regarded as not essential. In addition, it was reported, plans were being made for the formation of a government corporation, with a possible capitalization of $500,000,000, which would form a reservoir of capital from which to draw for the development of needed industries. While the contemplated legislation could not prohibit the issue of any new capital, it could, and, according to the Washington report, would bar such unapproved issues from interstate sale. The government, it was pointed out, also could probably rely upon the people to reject any issue of which it did not approve, and if necessary, could bring to bear pressure that would doom to failure any attempt to market stocks and bonds without its sanction.

Vancouver, B.C.—Fire Chief Carlisle reports the fires for December to *The Monetary Times* as follows: The fire department responded to 57 alarms during the month of December as follows: Fires where damage occurred 16, fires where no loss resulted 1, false alarms 14, smoke scares 2, chimney fires (no loss) 12, out of city limits 1, and services not required 11. The estimated total damage resulting from fires for the month amounts to $539, of which $399 was covered by insurance, leaving the property loss above insurance as $140. The total value of the property involved was $273,275. The following shows the cause of fires and alarms during the month: Backfire (carburetter) 2, children playing with matches 2, chimney fires 17, out of city limits 1, defective fireplace, grate, etc., 2, defective flues 3, defective chimney 1, electrical origin 2, false alarms 14, firewood left in ovens and on furnaces to dry 2, flying sparks 2, hot ashes placed in wooden receptacles 1, oil lantern upset 1, overheated furnace pipe 1, pot of rosin on stove catching fire 1, smoke scares 2, spontaneous combustion 1, and unknown 1. Christmas tree decorations catching fire was the cause of 1 alarm during this period.

MONTREAL OFFICE OF MARTENS & COMPANY

A branch office of Messrs. A. H. Martens and Company has been opened at Montreal, in connection with the company's stock department, and is in charge of Mr. R. H. Pringle. This financial house now has offices at Toronto, Montreal, New York and Chicago.

WALKERVILLE HAS BONDS TO SELL

Walkerville, Ontario, is calling for tenders for $91,645 6 per cent. bonds of varying maturities. The issue will be made for patriotic fund, hydro-electric, and local improvement purposes. Tenders will be received up to Friday next, January 25th. Walkerville is an enterprising and well-managed town.

SOME OF THIS WEEK'S FIRES

North Toronto, Ont.—January 17—The Belmont Garage at stop seven was destroyed. Estimated damage to machines, $10,000; to building, $2,000.

Toronto, Ont.—January 17—Gladstone Hotel was damaged. Estimated damage to building, $500; to contents, $100.

Welland, Ont.—January 16—Premises of the Chinese Y.M.C.A. and two adjoining houses were destroyed. Taylor Block on West Main Street was destroyed. An estimated loss of $50,000 is divided among the following:—Bradford's harness emporium, Ford & Britten's grocery store, and Tompkin's bakery.

IMPERIAL OIL COMPANY'S ORGANIZATION

Contrary to previous reports concerning the incorporation of the Imperial Oil, Limited, with a capital stock of $50,000,000, it is stated officially that the company will be an operating subsidiary of the Imperial Oil Company, Limited, and not the holding company. It will be the holding company for the entire Imperial and International Petroleum organizations. The new Imperial Oil, Limited, will take over the producing, manufacturing and marketing ends of the company, the reason for the incorporation being the provision of wider charter privileges than the Imperial Oil Company, Limited's. The charter of the new company, in addition to the powers mentioned, also gives it the right to operate live stock ranches and to deal in agricultural products. There will be no distribution of stock in connection with Imperial Oil, Limited, the step being an inside matter of operation. All the stock of the company is held by the Imperial Oil Company, Limited. Provisional directors of the Imperial Oil, Limited, are Walter C. Teagle, C. O. Stillman, G. W. Mayer, G. H. Smith, and W. J. Hanna.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

The following table of investment yields of stocks and bonds has been compiled for *The Monetary Times* by Messrs. Morrow & Jellett, Members Toronto Stock Exchange, 103 Bay Street Toronto:—

	Jan. 17th, 1918.

Victoria, B.C.—Maquinna Packing Company, Limited, $500,000; the Dahl and Falk, Limited, $25,000.

St. Rose du Lac, Man.—Farmers St. Rose Elevator, Limited, $10,000; A. Hurst, J. Allard, J. Robinson.

Windsor, Ont.—Ripley Peck Hardware Company, Limited, $60,000; C. A. Ripley, A. W. Peck, W. Griesinger.

Hartland, N.B.—Hatfield and Scott Company, Limited, $49,500; H. H. Hatfield, A. W. Kyle, B. L. Hatfield.

Village of Roland, Man.—The Roland Hardware Company, Limited, $25,000; G. Ross, M. J. Horn, W. Watson.

Hamilton, Ont.—Boston Insulated Wire and Cable Company, Limited, $200,000; B. T. Burley, H. B. Burley, L. W. Burley.

St. Catharines, Ont.—McKinnon-Columbus Chain, Limited, $1,000,000; L. E. McKinnon, D. S. Brisbin, W. A. MacKinnon.

Fort William, Ont.—The Duck Lake Mining Company, Limited (no personal liability), $250,000; W. T. Young, T. E. Dean, L. O'Brien.

Vancouver, B.C.—Standard Engineering Company, Limited, $10,000; B. Boe, Limited, $10,000; Ladyware, Limited, $50,000; Masset Timber Company, Limited, $200,000.

Winnipeg, Man.—Mutual Brokers, Winnipeg, Limited, $10,000; H. B. Finch, T. P. Griffin, W. E. Deitz. Auto Accessories, Limited, $40,000; L. S. Baxter, H. Rennie, W. F. Yeo.

Montreal, Que.—Birks, Corner and Company, Limited, $100,000; A. Birks, A. J. Corner, H. Havelock. Canadian Die Casting Company, Limited, $300,000; H. A. Bertram, F. H. Markey, W. W. Skinner. The Sterling Imports, Limited, $30,000; A. G. Ross, M. E. Wherry, C. M. Cotton. Wolvins, Limited, $2,000,000; F. S. Isard, F. H. Markey, W. W. Skinner. J. A. E. Gauvin Drug Store, Limited (J. A. E. Gauvin Pharmacie, Limited), $200,000; A. R. Plimsoll, R. Brodeur, A. Chouinard.

Toronto, Ont.—Canadian General Lumber Company, Limited, $200,000; G. H. Sedgewick, J. Aitchison, M. A. Boyd. Canada Pulpwood Exporters, Limited, $40,000; A. C. Brown, W. G. Kelly, D. Smith. Acme Laboratories, Limited, $50,000: H. J. Macdonald, C. W. Moorhead, A. Mayne. Canadian Northern Realties, Limited, $40,000; D. B. Hanna, G. Ruel. R. H. Montague Temple. R. Laidlaw Lumber Company, Limited, $2,000,000; R. Laidlaw, W. C. Laidlaw, R. A. Laidlaw. Hull Construction, Limited, $40,000; D. B Coleman, F. A. Addison Campbell, E. R. Lynch. Ontario Market Gardens, Limited, $40,000; A. W. Hunter, G. R. Sproat, J. C. Thomson. L. White and Sons, Limited, $40,000; L. White, A. White, H. White.

Winnipeg grain supervisors were notified on Tuesday by Food Controller Hanna that, beginning January 28th, all mills in Canada will manufacture standard war flour, to consist of one barrel from each 265 pounds of wheat. The old standard called for 300 pounds of wheat to the barrel. The result of the new standard is a saving of 35 pounds to the barrel. The old standard disappears for the period of the war.

LIFE INSURANCE AND BANK CREDITS

Notwithstanding War Conditions, Companies Have Sold More New Assurances Than Before

"It is a parodox that all the material prosperity should come with the widespread sorrow and loss which our casualties have entailed," said Mr. H. C. Cox, president of the Canada Life Assurance Company, referring to the progress of the life assurance business in his address at the company's annual meeting, held last week at Toronto.

"It may be this enforced realization of the great law of life and death," he continued, "or it may be the growing financial ability of the community at large, or perhaps a combination of the two, but whatever the cause, it is clear that in the general progress the life assurance companies have had a share, and have, perhaps without exception, sold more new assurances than ever before. It is a matter for congratulation that while almost every other necessity of luxury has for reasons, apparent or obscured, advanced in price, life assurance protection continues to be obtainable at rates which have been in vogue for many years. This feature has earned the appreciation of the public. The utilitarian value of life assurance to the state at large in an ordeal such as we are now undergoing is indicated by its record, for, as nearly as we can estimate, all companies doing business in Canada have during the war paid death losses arising out of it of $12,000,000, or an average of 20 per cent. of the total claims incurred during the war.

"These important sums have not been met without a strain more or less severe upon some of the companies, but I am glad to be able to say that not one so far has been unable to meet its full obligation, and there is ample ground for the belief that they will continue to do so. It is, however, well to bear in mind the difficulty of sustaining without disturbance a long succession of losses never anticipated, and the possibility of all companies having to fall back upon their contingent reserves, or even having to temporarily reduce the scale of their dividend allotments to the assured."

"Several of the best British and Australian companies have already found it necessary to reduce their bonuses, while others have passed them altogether. An interesting fact in this connection is the practice of one of the prominent German companies, whose policy contains a clause enabling the company to retain a portion of the profit accruing to each policy for the purpose of forming a special reserve against excessive death losses resulting from war. The company appears to have been taking advantage of this provision for some years, and has actually been appropriating the earnings of its members in countries now at war with Germany to assist in the payment of losses upon the soldiers of its own country. Incidentally, we are given one more indication of the long and exhaustive preparation of the German for war."

Life Insurance and Bank Credits.

In referring to the relationship of life insurance and bank credits, Mr. Cox said that banking and insurance corporations were coming in closer touch, although the significance of this relationship was only beginning to be understood by the commercial life of the nation. He continued:—

"To-day, not only do many of our banks include in their 'application for credit' forms a specific question as to the amount of life insurance carried, but frequently require the customer to bring that life insurance up to a certain figure, be he firm or individual, as a condition precedent to granting a line of credit. Further than that, we find the customer's answer to this question actually affecting the bank's consideration of the moral side of the claim for accommodation. Of this one prominent banker says:—

" 'When a man comes to us to borrow, we want to know how much life insurance he carries; not so much because of its bearing on his financial power, but as an indication of his type of mind, for the type of mind that induces a man to insure his life is the type of mind which makes for success in business.' "

Co-operation and Unification.

Mr. Cox, referring to the securing of uniform provincial insurance laws, said:—

"The tendency to co-operation and unification, which now makes its appearance between provinces, has already made considerable progress as between the companies which have their associations of presidents and officers, of actuaries and medical directors, through which the combined experience and knowledge of all are placed at the disposal of each. This interchange is immensely valuable to all who participate in it, and there is gradually evolving from it a uniformity of viewpoint and method which is maikng for greater efficiency in the conduct of what is necessarily an intricate and scientific business. The elements of respect and consideration are steadily strengthening between salesmen, who are naturally and unavoidably in active and daily competition, the result being a fairer and clearer presentation of the general merits of life assurance to the prospective purchaser.

"The widespread condition which is responsible for the rapid extension of the influence of women in financial and manufacturing activities has also brought them into more intimate relation to life assurance, and they are giving very material and valuable aid not only in office positions, but also in the selling department. Their larger entry into business affairs has brought with it an enhanced earning power, and in many instances an added responsibility, with an awakening to the possibility of providing, through life assurance, while they are still in receipt of good incomes, some measure of competency for their own future or for those with whose support they may be charged. The result is an important increment in the number and amount of policies being sold to women, with a more receptive attitude on the part of the companies, who have hitherto been unduly severe in their limitations regarding female risks."

War and Mortality Experience.

"For many years," said Mr. Cox, "most companies have had an exceptionally favorable mortality experience, but we must all, I think, look for a modification of this as a result of the great upheaval, not only through the actual deaths in battle, but through the impaired health and shortened lives of many assured, who have returned or will return to civil life, and through the abnormal and mental strain placed upon those who have been left at home."

PUBLICATIONS RECEIVED

Insurance.—Annual report of insurance companies for 1916. Issued by the Insurance Branch, Treasury Department, of Quebec province.

Agriculture.—An interesting report, issued by the Department of Agriculture of Manitoba, dealing with the situation of the crops, live stock and all other produce has been issued by the department.

Northern Manitoba.—An interesting booklet, published and issued by J. A. Campbell, commissioner, by authority of the province. It contains information regarding the development of mining, agriculture and waters, and the production of timber, pulpwood, fish and furs of this territory.

French Canada.—"Meeting the French-Canadian Half-Way." A talk given before the Montreal Publicity Association, October 12th, 1917, and before the Toronto Ad-Club, November 27th, 1917, by C. E. A. Holmes, B.A., editor of "Publicity." Third edition. Price, 10 cents. Canadian Advertising Agency, Limited, publishers, Unity Building, Montreal.

Mining.—The eleventh annual summary of Mining Statistics has just been issued by Messrs. Heron and Company, members of the Toronto Stock Exchange. The useful data in connection with all mining companies, the shares of which were traded in on the Toronto market during 1917 have been prepared with great care and accuracy. This summary is a valuable compilation.

London, Ont.—A resume of the past two or three years' work of the London (Ont.) board of trade is contained in an excellent little booklet just issued. No report has been published by the board during this period, and by including the activities of a few years, a better perspective is given by which to judge their value to the community. For obvious reasons the report has been condensed as much as possible. It is published for the information and criticism of all members, and also to be placed in the hands of prospective members, thus assisting the membership committee in its work. Mr. Gordon Philip, the capable secretary of the board, says in the introduction: "The board of trade can show no annual statement of increased sales, profits or dividends. Its standard of efficiency is the service it renders to its members, to the city of London, to the surrounding district, the Dominion and the Empire. Members and non-members are urged to peruse the following pages and to consider the advisability of giving personal thought and diligent effort to help the work of the board of trade in the future. Constructive criticism and personal co-operation are asked."

Issued by the London (Ont.) Board of Trade. Gordon Philip, secretary.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

St. John, N.B.—The city council will probably issue bonds for the purpose of financing the paving work on Main Street.

Winnipeg, Man.—The Greater Winnipeg Water District will be permitted by the minister of finance to float bonds to complete its construction scheme.

Shediac, N.B.—A. W. McQueen, clerk, reports the town's assessed value of real estate and personal property for 1916 as follows: Real estate, $274,200; personal property, $86,400.

Sackville, N.B.—Thomas Murray, treasurer, reports the town's assessed value of real estate and personal property for 1916 as follows: Real estate, $574,850; personal property, $320,300.

Sussex, N.B.—J. William Freeze, treasurer, reports the town's assessed value of real estate and personal property for 1916 as follows: Real estate, $731,000; personal property, $354,300.

Restigouche, N.B.—Alex. J. Le Blang, secretary-treasurer, reports the county's assessed value of real estate and personal property for 1916, as follows: Real estate, $3,059,680; personal property, $679,370.

Windsor, Ont.—Messrs. Macneill and Young, Toronto, agreed to purchase a block of unsold securities at a price to net 6¼ per cent. This excellent offer was rejected, and bids for $250,000 bonds are being invited.

Northumberland, N.B.—Mr. E. P. Williston, secretary-treasurer, reports the county's assessed value of real estate and personal property for 1916 as follows: Real estate, $2,243,965; personal property, $497,990.

Montreal, Que.—It has practically been decided by the board of control not to ask the Quebec legislature for permission to float a loan to make good the $3,000,000 deficit. Instead, it will try to levy various taxes to secure the sum needed.

Victoria, N.B.—James Tibbits, county secretary-treasurer, submits the statement for 1916 as follows: Assets, county buildings, $18,000; assessors' valuation of real and personal property in county, $2,561,448, making a total of $2,579,448. The total liabilities of $13,000 are as follow: Four debentures $500 each at 5 per cent., due September 1, 1920, $2,000; 12 debentures $500 each at 5 per cent., due September 1, 1931, $6,000; 10 debentures $500 each at 5 per cent., due June 1, 1933, $5,000.

Montreal, Que.—The Quebec legislature has been asked by the Central Catholic School Commission for power to borrow $3,000,000 to meet the heavy obligations incurred when the newly formed central body took over the debts of the various independent commissions of former days. Approximately, the commission's debt is $2,000,000, which does not include the amounts required for administration during this year. The budgets of the four district commissions, plus interest, sinking fund and other fixed charges, reach a total of $2,568,391, and the probable revenue is $1,771,788, leaving a deficit of $769,503. The commission wishes to apply two-thirds of the loan for which power is sought, to consolidating its debt, and the rest to meeting the deficit. It also asks that the school tax be increased, to do away with the deficit in administration. It is thought the increased tax rate would give a surplus instead of an annual deficit.

Quebec, Que.—According to the report of municipal statistics for 1916, the number of municipalities increased from 1,241 to 1,256, while the new mills and factories erected in the province reached a total value of $6,327,180, as compared with $974,784 erected in 1915. The value of taxable property in the province increased by $10,000,000, but justice was not done in the province in the municipal statistics furnished. It was pointed out that the February issue of the Monthly Statistics published by the Federal government treated the province much better, putting the value per acre at $52, whereas the figures supplied according to the municipal valuation is only $16 per acre. The value of municipal water and sewer plants dropped in the year from $52,482,337 to $48,122,253, while the value of gas plants decreased from $345,032 to $57,111, of telephone systems from $307,230 to $75,105, while the municipalities increased their holdings of electric light plants from $2,867,081 to $4,105,001, and of miscellaneous municipal works from $185,432 to $4,926,092.

Vancouver, B.C.—The following statement has been made to the city council: On April 15 debentures were sold as per tenders received as follows: $73,000 general debentures at 78.20, netting $57,086; $47,440 local improvement at 95.14, netting $45,134.42, which, with accrued interest, made a total of $102,402.92. Out of this the following amounts were paid to redeem treasury notes: $75,000 plus six months' interest, $2,250; deposit to road construction savings account, $7,895.86; deposit being amount set aside for purchase of bridge shares, $7,278.72. In April, as per tenders received for treasury notes, $17,000 were sold to Messrs. Terry, Briggs and Company, at $97.18, plus accrued interest from May 10; security for these notes being unpaid taxes for the year 1916. The amount realized was $165,404.30. After deducting bank charges of $196.71 was received $165,207.59. Out of this amount there was deposited the 1916 sinking funds—general $14,759.02, local improvement, $77,746.18 and $30,000 which was paid to the Royal Bank on account of loan.

The amounts of outstanding treasury notes owned by the city at the present time are $145,000 out of the $225,000 issue, and $138,000 out of the $170,000 issue. In April the council purchased $155,000 of war bonds, paying by withdrawing from the general sinking fund $47,866.85, and from local improvement sinking fund $80,520.48. On December 31 the purchase of $74,000 bonds was completed. The balance of taxes due for 1917 amounted to $167,462.36; 1916 arrears, $151,635.55; 1915 arrears, $131,176.30; 1914 arrears, $63,709.58; and 1913 arrears, $950.19, making total of arrears without interest, $515,183.96.

Toronto, Ont.—In the annual report issued by Assessment Commissioner Forman recently, the city's assessment value is shown as $602,777,559, and its official population 473,820. The figures differ somewhat from the returns made by the assessors when they completed the revision of the assessment. Their valuation of the assessable property of all kinds was $605,107,430, but the court of revision and the county judge made reductions aggregating $2,329,871, but, after allowing for this the gross assessment shows an increase of $14,357,246 over the previous year. In the matter of population, the assessor's figures are always lower than those of the police and the compilers of the city directory, which assume that the population exceeds 500,000. Deductions made by the court of revision deals with the original figures only. Thus an increase is shown in the assessment of 2.83 per cent., as compared with the previous year, and an increase of 2.88 per cent. in the population. The report makes no mention of the total amount of exemptions, which now are approximately $90,000,000, or 6.74 per cent. of the total.

The gross assessment of the city has increased $478,426,118, or 377 per cent. in the past twenty years, but the most phenomenal increase was in the past ten years, when the increase was $399,722,177, the respective figures being as follows: 1898, $126,681,312; in 1908 $206,385,253; in 1918, $605,107,430. During the same period the population increased as follows: In 1897 it was 183,172; in 1907, 272,600; in 1917, 473,829. This shows an increase in population of 290,657 in the 20-year period and of 201,229 within the past ten years. It will thus be seen that the assessment values have soared at a far higher ratio than the population.

Mr. W. H. Alderson has been elected treasurer of the Toronto board of trade.

Mr. F. G. Donaldson, assistant general manager, has been appointed general manager of the Montreal Trust Company, in succession to Mr. Vincent J. Hughes.

Mr. C. H. Bogert, general manager of the Dominion Bank, has been elected president of the Toronto board of trade. Mr. Bogert is one of the best known bankers, and has been active in the good work of the Toronto board of trade.

Mr. Alex. Mackenzie, for some time the company's superintendent for Ontario, prior to which he was for many years with the Federal Life Insurance Company of Hamilton, has been appointed assistant manager of agencies by the Manufacturers' Life Insurance Company.

Our Land Settlement Problem

PROPER *Expansion of Agriculture Will Help Solve Post-Bellum Problems—There Will Be Two Principal Types of Settlement, Experienced Farmers, With Capital, From the United States and Perhaps Eastern Canada, and Ex-soldiers of the Canadian and British Forces.*

By GEORGE W. AUSTEN

No one, I think, will challenge the assertion that Canada's chief task in reconstruction after the war will be the building up of our agricultural production. Our manufacturing industries will face much dislocation. In 1913 our exports of manufactures amounted to $43,000,000. In the twelve months to August, 1917, they were $614,000,000. We have manufactured $1,000,000,000 worth of munitions alone. After the war, economically exhausted Europe will buy, not manufactures, but foodstuffs and raw materials. If, therefore, there is industrial reaction—so far as exports are concerned—to pre-war conditions, we shall have to rely on the expansion of agriculture and on utilization of our natural resources. Fortunately, demands for foodstuffs and basic materials will be strong, and prices good, and well maintained.

There are two ways to build up agricultural production: (1) by increasing the output from farms now occupied; (2) by encouraging new settlement. Though the 1917 area under crops was about 10 per cent. less than in 1916, the harvest was fortunately much better. The labor shortage held down, but did not diminish production. About 60,000 farm workers have donned khaki, and drafts under the Military Service Act may bring the number up to 80,000 or more. The return of most of these farmer-soldiers, the industrial reaction, and immigration promise considerable relief from the labor shortage, and production on present cultivated areas ought to show much increase, especially if government policy is directed toward making farming costs lower. Much can be said on improving the economic position of the present farmers, but this article must deal with new settlement. After all, it is from new settlement that our chief hopes of an enormous expansion in production, and of the creation of a new general prosperity, must come. Our vast areas of vacant farm lands—the last good cheap lands on the continent—await settlers by the hundred thousand. Where are they to come from, and how can they be advantageously located, and helped to build up themselves and the nation?

There will be two principal types of settlement. One will be experienced farmers, with capital, from the United States, and perhaps some eastern Canada farmers. This is the type with which the west is familiar. This summer the influx of such settlers, some 35,000 in number, with a capital of about $45,000,000, was the largest in years. After the war, the movement will undoubtedly become most extensive. The other type will be the ex-soldiers of the Canadian and British forces who, though mostly inexperienced, will settle under government auspices, and receive the special financial aid to be provided by the Dominion Treasury. Now the American and eastern settlers with capital can be safely trusted to look out for themselves. Good farm land in the States of the Middle West is $100 an acre. In the Canadian West it is from $15 to $30 an acre. On the same capital, a farmer can have three times as much acreage in Canada as in the good farming areas of the United States. Millions of acres await such settlers—at certain prices. Even if there is considerable speculative profit, the prices still are comparatively cheap. The railway lands are reasonably-priced, because settlement, not land profit, is the object. It is in respect of government-subsidized settlement that real difficulties exist, and strong, wise handling is required if proper benefits are to accrue from it.

What are the obstructions? They consist chiefly in the economic curse of land speculation that gets Crown land of real productive utility, holds it idle, and forces bona fide settlers to scatter far and wide to get land at low prices. Sir James Aikins, lieutenant-governor of Manitoba, declared there were 30,000,000 acres of land, close to the railways, held out of production in Manitoba, Saskatchewan and Alberta. A large part of this is held by absentee speculators. In Saskatchewan in 1916, the provincial surtax of $10 per section applied to more than ten million acres—that is, to lands fairly well described as "speculatively held idle." In Alberta, the wild lands tax, applied to similar lands, was imposed on more than eight million acres. These are mostly good agricultural lands that ought to be producing, feeding the railways, creating wealth for the home districts and the nation in general. They are holding the west back, and preventing the proper solution of our immense railway problem.

It is true that department of the interior reports show there are perhaps 15,000,000 acres of Crown land "suitable for agriculture" within 20 miles of railways. Hon. Dr. Roche told the House of Commons there were 4,000,000 acres within 10 miles. But western men describe the Dominion lands within reasonable distance of the railways as either forest reservations, school endowments, heavily timbered land or marsh. There is little Crown land suitable for settlement within reasonable distance of the railways. The Dominion government's land settlement scheme contemplates the placing of many, many thousand ex-soldiers or ex-sailors on the land. Is the settlement board, or whatever authority selects the land, going to try to reclaim the well-located idle lands, or is it going for the needed areas far away from the railways? That is an important question. Land under patent is, of course, subject to the provinces, and perhaps the remedy may lie in provincial hands. The problem is there, and co-operation can solve it.

Perhaps by using the small colony settlement system, working it out gradually as the need arises, the land settlement board may contrive to fill in vacant Crown lands of suitable quality. If it does not, the need of more branch lines will be created—and few new branch lines recently built pay interest on the cost. What is to be done, in selecting areas, had not, at the time of writing, been decided, but the formation of a reconstruction and development committee of the union government created machinery for taking up such tasks. It is worth noting that the Dominions Royal Commission, investigating Canadian resources, recommended "closer settlement and added cultivation . . . for the areas now well provided with railway facilities." Any competent railway man will tell you that the problem is not, at present, to scatter our population, to compel vast new capital outlays in opening up and organizing unsettled territory, but to get present served areas properly settled. This is the crux of our problem, and no false expansionist ideas can hide it.

Land in Private Hands.

Canada has, roughly speaking, about 100,000,000 acres of farm lands in private hands, and only about 38,000,000 acres under cultivation. We had, in 1911, about 933,000 agricultural workers of both sexes. Because of rural depopulation in the east, we probably have no more now. Is it necessary to open up vast new areas, to accommodate new settlement, when so little is cultivated of areas now privately owned? Rather would it not be economical policy for the reconstruction committee to seek to eliminate the farm-land "parasite," and bring into production millions of acres of idle land in the well-settled areas?

We shall be told that expansion is good business. The railways have to spend capital on branches. They buy rails, ties, poles, wire, rolling stock; roads are built; schools, stores are opened; new stocks of implements required. But has not the lesson of the "construction" era—that of transcontinental railway building up to 1913—been duly impressed on us? What has been the financial result, to the Dominion treasury, of that era? We see now that the vast borrowings of that period to build transportation plant twenty years ahead of our needs created an immense liability. The Canadian Northern Railway legislation in the last session of parliament explains part of what we face. The nation has large liabilities on railway account, if it would prevent grave financial occurrences. This railway problem will be solved only in one way—and that is by settlement and production to create paying traffic. We have definite warnings, therefore, to set our faces against another "expansion" period until we have caught up with settlement in the areas now served. No capital expenditures that can be avoided ought to be made until production will accrue therefrom in sufficient quantity to give proper returns.

For Land and Loan.

The Dominion Land Settlement Act provides for a quarter section of land free to any ex-soldier or ex-sailor of the forces of the Empire. A loan of $2,500 to each man, to provide for buildings, improvements, etc., is authorized. Doubtless this financial assistance will be given to ex-service men settling on Ontario, Quebec or other provincial Crown lands. The east will expect new settlement as well as the west. None of the provinces, outside of Ontario and British Columbia, has made definite plans to aid returned soldiers to settle on the land, but the matter is now being generally considered. The wastage of man-power in Europe has been so great that perhaps emigration of good agricultural workers will be prohibited. Certainly the British government, faced with the problem of making Britain self-sustaining, as far as possible, in the matter of food, will be very unwilling to let good settlers go. But out of the half-million Canadian ex-soldiers, and five million British ex-soldiers, are we not likely to get at least 100,000 applications for free land, and the Dominion loan? At a quarter section each, that would settle 16,000,000 acres, and the amount of loans would be $250,000,000. The magnitude of such expenditures would assure plenty of industrial activity. The putting of such capital into permanent improvements on the land would create much new business, and add heavily, within a short time, to railway traffic. We should not require, therefore, to indulge in "plant expansion" except insofar as it directly creates production.

Settler and Successful Farmer.

The Canadian Pacific Railway land department has found that a settler and a successful farmer are by no means synonymous. No doubt soldier-settlement will be accompanied by a certain percentage of failure, but if the Dominion loans are spent on permanent improvements, there ought to be no real loss, since a strong rush for land would eventually provide substitutes. It will be important that the national policy be directed toward making farm production more profitable. Apart from the present high-price period, perhaps, manufacturing and transportation has yielded relatively much bigger profits than agriculture, as a whole. It will be necessary, of course, to conduct a vast educational campaign to give ex-soldiers taking up land sufficient instruction to help them make good. The Ontario government is doing practical spadework along this line, already, and Ontario's immense agricultural opportunities will benefit from such direct help to raw settlers. The settlement problems in the east have not, however, the same ramifications, the same national scale, so to speak, as those in the west. The Dominion government is creating a special department of colonization and immigration—a wise step, in view of the new importance in the world to which Canada is rising, and to which our natural resources, our riches in land, and newly revealed capacities naturally lead. Canada now bulks large in the eyes of Europe, and we shall receive, after the war, economic rewards and prizes from the efforts of our soldiers in France and Belgium.

PUBLICATIONS RECEIVED

Navigation.—Eleventh annual report of the Inner Harbor Association of Victoria, B.C., for 1917.

Navigation.—A report of the Department of Naval Service for the fiscal year ended March 31, 1917. Issued by the Minister of the Naval Service.

Conservation.—"Conservation in 1917" by Sir Clifford Sifton, reprinted from the ninth annual report of the Commission of Conservation, Ottawa.

Insurance.—A report of the proceedings of the eleventh annual meeting of the Association of Life Insurance Presidents, published by the Association, in New York.

Mining.—Report regarding the possibilities of establishing a carbonizing and briquetting plant for the treatment of lignites. Published by the Commission of Conservation, Ottawa.

War.—January, 1918, issue of "Letters from the Front," published by the Canadian Bank of Commerce. The booklet constitutes a thrilling record of war events, in which the Bank's men have taken part. It is a splendid tribute to the part which Canadian bank men are playing in the great struggle.

Reference.—Canada Year Book, 1916. Edited by Mr. Ernest H. Godfrey, F.S.S., and issued by the Dominion Statistician and Controller of Census. The tables have been compiled as usual by Mr. James Skead and Mr. Joseph Wilkins and the diagrams have been drawn by Mr. E. R. Watts. A valuable reference volume.

Reference.—The Canadian Almanac for 1918, which is published by the Copp, Clark Company, Limited, has just been issued. It has been published continuously since 1848, and is an indispensable reference volume. It contains among other things: Astronomical calculations; eclipses, star tables, latitude tables; complete customs tariff; banks with branches and names of managers; the new Income War Tax Act; patents and copyrights in Canada; Canadian Militia list; the new military service law; postal information; complete list of post offices, with railway on which located, or nearest railway station, carefully revised to date; list of newspapers published in Canada, with their circulation and politics; titled Canadians; Dominion and provincal governments, and names of officals, with their salaries; foreign consuls in Canada; complete clergy list; legal and judicial information; county and township officers; barristers and solicitors; educational institutions; miscellaneous societies; chronology of the Great War; chartered accountants; life assurance, with rates of various companies; bank and other stocks, showing dividend and highest and lowest prices at which sold; 568 pages; handsomely bound in rexine, gilt title; price, $1.50.

Contending that it is unconstitutional and, further, might have been satisfactorily settled by conference and arrangement, the government of Alberta has written Premier Borden protesting against the order-in-council regarding the issue and sale of provincial securities.

A $4 poll tax on every male person in the city over 21 years of age and under 60 years has been decided upon by the Toronto board of control in connection with the revenue survey which it is now making. In addition, it is proposed to levy special taxes on ice-cream stands, on wagons, electricians, local improvement taxes on cemeteries, fees for the use of the parks for sports, license fee on contractors with places of business outside the city and doing work within the city limits, and other taxes.

SHIPBUILDING ON VANCOUVER ISLAND

Many Vessels Launched During Past Few Months—Work Pushed With All Speed

These and other interesting facts are recited in the annual report of the Inner Harbor Association, Victoria, B.C., just published:—

When the great need for ships became apparent the Cameron Lumber Company, Limited, operating a saw mill on the Upper Harbor of Victoria, and the Genoa Bay Lumber Company, operating a mill on Cowichan Bay, Vancouver Island, organized a shipbuilding company under the title of Cameron-Genoa Mills Shipbuilders, Limited, and established a shipyard on the western shore of the Inner Harbor of the city of Victoria. Work was started thereon about the first of June, 1916. After the necessary buildings had been erected and the machinery installed, the keels for three ships were laid down in rapid succession, and work thereon pushed with all possible speed. The first ship was launched about February 1st, 1917. So far there have been launched by that company six five-masted wooden schooners. These ships are 256 feet long over all, 43 feet breadth of beam and 21 feet depth of hold, with a carrying capacity of from 1,500,000 to 1,750,000 feet of lumber, or 2,500 tons dead weight, equipped with auxiliary power of the Bolinder type of engine, developing 350 horse-power, with a normal speed of 7 knots when engine-driven, using oil fuel, and carrying a crew of 15 men.

They have proved themselves to be excellent lumber carriers, loaded with lumber for overseas markets as they have been completed and ready to be put into commission. These ships are classed A1 at Lloyds for 12 years. This shipyard has now on the ways and under construction four steam schooners, which are being built for the Imperial Munitions Board of the British government.

Work With all Speed.

The Foundation Company's yards were established during the summer of 1917, and five wooden steamers are now on order at these yards by the Imperial Munitions Board, four of which are in various states of progress, and one will probably be launched in a short time, the others following at short intervals.

These steamers are 250 feet long, 42 feet 6 inches molded breadth and 25 feet molded depth, with a dead weight carrying capacity of about 2,800 tons. The steamers are of the well-decked type; have four extra large hatchways with five winches for rapid loading and discharging cargo. They have ample accommodation for officers and crew, and equipped with two class A lifeboats to British Board of Trade requirements, each capable of taking the whole crew. The engines are triple expansion, developing 1,000 indicated horse-power, two marine boilers of the Howden water tube type, three furnaces with forced draught for either coal or oil complete. All parts of the vessel's hull and machinery and fittings are standardized, designed with the idea of providing a good commercial, fairly speedy type of cargo carrier capable of being built in the shortest possible time (in this case less than six months) at a minimum cost. These two shipyards employ about 1,300 men and have a monthly pay roll of about $100,000.

Altogether the shipbuilding programme of the province comprises 41 wooden ships distributed amongst the various shipyards along the coast. Twelve of these are auxiliary schooners and constitute the fleet of the Canada West Coast Navigation Company. Two are for the Dominion government and 27 are for the Imperial Munitions Board. The Canada West Navigation Company's ships and the two schooners for the Dominion government are of the same type and require about 1,100,000 feet of lumber apiece. The average price of lumber has been about $36.50 a thousand feet. In British Columbia there is an inexhaustible supply of the finest timber, admirably adapted for shipbuilding purposes, with a constant demand in the foreign market.

Quality of Wood Excellent.

The Douglas fir is one of the best woods for spars frequently squaring 45 inches for a length of 90 feet. It is exceptionally strong for its weight, a fact more important in the shipbuilding industry than almost any other business requires. It is important that the material be as light as the desired strength will permit, since all surplus weight increases the cost of transportation. It is one of the few woods whose strength is above the value set by the well established law of weight vs. strength.

In addition to the large timbers and planks obtainable from Douglas fir trees, the stumps yield the finest and largest ship knees in the world. The knees used in the construction of the local vessels were obtained at Cobble Hill and experts who have seen them declare they are the very best known. Cedar, spruce and hemlock abound of great size. The best timber areas are as yet, however, untouched as the mills have hitherto limited their operations to coast districts with direct water carriage. The area further inland will be reached later by railroads as the country is more developed.

Facilities for Ship Repairing.

As having a direct bearing upon port interests, attention may be called to facilities for shipbuilding and general repairing directly connected with the harbor.

In the Upper Harbor or Basin, are situated the works of the Victoria Machinery Depot, having a frontage of about 360 feet, the marine ways are fitted with a cradle 280 feet long by 60 feet beam, providing dry dockage for repairing, cleaning, etc., for vessels up to 3,000 tons displacement. Larger vessels are docked by the firm at the Esquimalt drydock. At the plant are situated up-to-date machine shops, boiler shops, blacksmith shop, foundry and pattern shops, and a large wharf for receiving and storage of goods.

Supplies and Equipment Ready.

Contracts have been obtained for the manufacture of the Howden marine boilers for the Imperial Munitions Board for installation in wooden steamers under construction on this coast. Hutcheson Brothers and Company, Limited, Bay Street, electrical and mechanical engineers, iron and brass founders, manufacturers of marine and stationary engines, anchor and cargo winches. This firm has a contract for the supply of winches and other deck machinery for the Imperial Munitions Board.

The Robertson Iron Works, Store Street, supply most of the heavy forgings for the steering engines and other machinery, for which they are fully equipped with steam hammers and complete appliances. The Ramsay Machine Shop, machinists and engineers, Store Street, are supplying winches for use on these steamers for the Imperial Munitions Board, together with the under-water and other special fittings and steering engines, and the Lemon Gonnason Company, Limited, capital planing mills, Orchard Street, have supplied a large proportion of the finished framing, doors, windows and house finishings for the vessels recently launched and are completing similar work for the steamers building for the Imperial Munitions Board.

Messrs. Moore and Whittington, of Pleasant Street, have supplied to both the shipyards a considerable amount of the heavy timbering for the ribs and ceilings, as well as the decking and house framing used in the various ships under construction. Messrs. Jas. Leigh and Sons are supplying to the shipyards of the Foundation Company and the Cameron-Genoa Company a proportion of the heavy timbering and decking and house work used in the various ships that have been and are now under construction.

Obtain Work of Noted Company.

The firm of Yarrows, Limited (associated with the firm of Yarrows and Company, Limited, of Glasgow), builders of shallow draft vessels, have extensive shipyards at Lang Cove, Esquimalt Harbor, contiguous to the present government drydock. Their marine railway is capable of accommodating vessels up to 300 feet in length by 55 foot beam, and has a hauling capacity of 2,500 tons deadweight. Larger vessels are docked by the firm at the adjacent government drydock. Their wharf is over 600 feet in length and has shearlegs with a lifting capacity of 60 tons. Also a floating crane with a 95 feet boom capable of liting 10 tons.

The firm is at present working on a contract for propellers for the Imperial Munitions Board, for the wooden steamers under construction, and also for five sternwheelers for river service in India, 185 feet long and 30 foot beam; two have been finished and put into service, while the other two (and a third 185 feet by 35 feet by 7 feet) are under construction. After being fully assembled at the Esquimalt Yards and placed in readiness for the water, the vessels, which are of extremely light draught (about 3 feet) and practically flat bottomed, are "knocked-down" and the parts shipped to the Orient, where they are re-assembled and put in running order. They carry both passengers and freight and make about 10 knots a hour. Contiguous to the above is the government graving dock, 480 feet in length by 90 feet in width at coping level and 65 feet wide at the entrance, with a depth of water of 26¼ feet. This dock is available for general ship repairing when not required by the government.

PRUDENTIAL LIFE LIQUIDATION

Report of Liquidators on Winnipeg Company's Affairs—How Payments Have Been Made by Shareholders

A financial statement of the position of the liquidation of the Prudential Life Insurance Company, Winnipeg, with some details as to how payments have been made by shareholders, have been issued by the liquidators, the Northern Trusts Company. The liquidators propose immediately to ask or an appointment with Mr. Justice Prendergast to consider:—

(1) The claims under life insurance policies, and to decide whether the liquidator shall admit them all or compel such as are open to dispute to be enforced by judgment.

(2) To decide whether, in view of the difficulty and delay in making collections on the judgments and executions we have obtained, it is expedient to make a further call on the shareholders of the company.

"Our own conviction," says the liquidators' report, "is that sufficient money can be secured from these judgments and other assets of the company to liquidate its entire indebtedness in time, but the collections for the past few months have been so unsatisfactory and so far below our anticipations that we recognize that it will be a year or more before we can expect to collect sufficient to pay the debts in full. For the past six months the collections have averaged $2,316 per month, and the average for the next six months is likely to be less.

Suit Instituted by Mr. Miner.

"The suit for $25,000 instituted by Mr. Miner, the managing director, against the company for wrongful dismissal, etc., has not been very vigorously prosecuted by Mr. Miner during the last six months, and, whilst we have come to no arrangement to that effect, we think there is every probability that this suit will no be proceeded wih, and if proceeded with, we are advised that Mr. Miner's chances of winning the same are very remote.

"Up to date, out of 125 cases that we have of shareholders disputing liability, 45 defences have been withdrawn, while in two instances, involving 15 shares, the evidence produced was such as to warrant the court in striking the allotments off the list without the matter being carried to suit. The number of cases that have been compromised has been insignificant, and in every instance there has been good and satisfactory reason for such compromise."

The items, amounting to $53,350, appearing in the liquidators' statement of receipts under the head, Insurance Transactions, are the totals of the receipts and disbursements from the conduct of the insurance business of the company for the period from the appointment of the provisional liquidator to the date of the ratification of the re-assurance agreement with the Sun Life Assurance Company, which was fully concluded in March, 1916. The receipts include the collections from premiums, renewals, etc., and the disbursements, such items as are incidental to the carrying on of the business.

As to Mortgages.

The mortgage assets which came into the hands of the liquidator amounted to, including interest in arrears and accrued, $70,598, and consisted of 42 first mortgages, covering properties located throughout the western provinces, also one second mortgage. This latter, amounting to $1,153, was taken by the company as collateral for arrears of insurance premiums, and the security has since been foreclosed by the holder of the first mortgage, there being insufficient equity to protect the claim under the second mortgage.

Twenty-six mortgages have been fully liquidated as to principal and interest, and the residue, amounting to $37,347, as appears in the statement of present assets, represents "current mortgages" $11,953 and "foreclosures" $25,394. The former, with the exception of one mortgage, amounting to $2,580, which it is anticipated will be paid immediately, have been brought to a point where it is impossible, owing to moratorium, to proceed further to enforce collection, and they could not be disposed of without entailing a considerable sacrifice to the estate, while, in the opinion of the liquidator, they will ultimately realize the full value. Of the foreclosures, nine in number, title to the property has been acquired in the case of six, while three are still in process of suit.

These properties are located in Moose Jaw, Medicine Hat, Cranbrook and Vancouver and one-acreage property in the vicinity of New Westminster, and with the exception of the latter are all "improved," although under existing conditions it is impossible to make any disposition of them, and the revenue derived is only nominal. The valuation placed upon these properties ($25,600) is practically the amount of the claims.

The Garry Street property is a centrally located Winnipeg property, upon which is situated a garage, and was purchased by the company for $100,000, subject to a mortgage of $50,000, bearing interest at 7 per cent. At the date of liquidation it was under lease for a term of five years, but already the lessee had defaulted under the terms of the lease and was in arrangement with the company to pay $300 a month. Subsequently he was unable to carry out this agreement, and a new tenant was secured at an annual rental of $4,500 for a term of three years to July, 1920. This places the property on a basis where it will show an annual deficit of approximately $600, but it is thought expedient to carry this deficit rather than allow the property to be foreclosed, as it should eventually find a sale that will leave some surplus for the estate.

The company's asset in debentures was fully realized as to principal and interest, amounting to $13,824.

Call on Shareholders.

The list of contributories contained the names of 1,052 shareholders, representing 9,977 shares, and in respect of which there was owing by certain contributories $121,502 on account of original indebtedness for the purchase of stock. Of the number, 951 contributories, representing 8,843 shares and a liability for original indebtedness of $107,577, have been settled on the "fixed list," and there still remains 99 contributories holding 1,116 shares with a liability for original indebtedness of $13,135,72, together with an amount of $33,480 as under the call of $30 per share, who, by reason of enlistment for active service, or having filed defence, are not as yet settled on the list.

In respect to the call of $30 per share, which on the basis of the fixed list amounted to $265,290, there has been collected $116,341, and an amount of $431 has been written off in connection with compromises which have been effected, leaving a balance uncollected of $148,517.

Of the original indebtedness, $8,084 has been paid, $499 written off re compromises, and, after taking into consideration various adjustments in respect to the balances owing, there still remains $98,488 outstanding, the greater portion of which is "bad," being very greatly overdue and uncollectible.

Of the total outstanding indebtedness in this connection, $247,005, the following classification will afford some idea as to the prospect of further collections:—

289	Contributories have paid the call of $30 per share in full, amounting to $92,640, together with $5,560.14 on original indebtedness, there still remaining balances owing by certain of these amounting to	$ 3,108.55
6	Contributories have furnished security covering	3,363.74
46	Contributories paying under arrangement "unsecured" have paid $7,926.22 re call per share and $38.45 on original still owing...........	10,075.49
268	Contributories against whom executions have been issued paid on account prior to execution $2,717.61 and $13,258.01 subsequent. The total of executions issued was $97,881.67, in respect of which there still remains outstanding $84,623.66, and in addition there is owing by these contributories $7,517.99, which amount is not included in the executions	92,141.65
74	Contributories have enlisted since the settling of the list	28,602.21
253	Contributories whom the liquidator is unable to locate, or who are situated outside the jurisdiction of the court, or who are not considered sufficiently responsible financially to warrant incurring expense in legal process, represent	108,229.25
7	Contributories have entered defence since the settling of the list and proceedings are stayed	1,484.91
8	Claims, representing $2,865.63, were compromised for $1,935.	
951		$247,005.80
99	Contributories not settled on list............	$ 46,615.72

Under the liquidators' statement of assets and liabilities, the following entry appears: "Not considered: Disputed claim filed by G. H. Miner, $72,600; disputed claim, filed by J. T. Huggard, $21,000."

BUYING FOREIGN SECURITIES

The finance minister last week conferred with Canadian bankers respecting the financial problems of the coming year. No information has been given as to the proceedings but it is generally understood that the minister is still seriously considering the prohibition of the purchase of United States securities for investment accounts by Canadian individuals and corporations. There has been considerable buying of certain classes of securities in the United States for Canadian account, among them being Anglo-French bonds and the United States Steel Corporation issues.

Opinions here differ as to whether or not the time has arrived for such a ruling. It seems reasonably certain, however, that as soon as the finance minister is convinced that investment in United States securities is resulting in a considerable outflow of Canadian funds, he will invoke the War Measures Act to put an end to trading in foreign securities.

AFTER THE WAR

In the principal belligerent countries, are active signs of preparation for the period to follow the war. This does not indicate that peace is any nearer, save for the fact that the war is nearly four years old. The activity is based on the assumption that the struggle must cease one day and that then will come the problems of reconstruction, of land settlement, transportation, trade and business generally. This will prove a critical period in many ways but it will also be an era replete with interest for the student, financier, trader, and business man.

In Germany, some attention has been given to post-bellum problems but so far as we can gather, the postponement of defeat and disaster is almost fully exercising the ingenuity and activities of that nation. In Japan, where war participation is not so clearly defined, there is a marked advance in the gathering of commercial information, with a view to capturing trade formerly done by other countries. This has resulted already in a considerable increase in Japanese exports to a number of important markets. While the United States has immense work in the organization, equipment and transportation of its expeditionary forces, and in the maintenance of its war industries, attention is being given there to preparations for the post-bellum period. In Canada we, too, find the war task dominating but work is being done in many directions to prepare for the time to follow the final truce.

The United Kingdom, upon which has fallen such a heavy financial and general burden for more than three and a half years of war, has excited the admiration of its Allies by the practical steps it is taking with a view to future trade. Its war load is tremendous but that it will remain a very powerful commercial nation after the war, despite the drain of the struggle, the heavy national debt, and the loss of manpower, is quite certain. Every week almost we hear of the appointment of important committees to deal with post-bellum matters. It is now stated that the minister of reconstruction has established, in conjunction with the treasury, a committee on financial facilities after the war, the object of which is to anticipate and provide methods to overcome the financial difficulties that will arise in connection with commerce and industry. The vast number of factories which have been diverted from their normal trade to war work will face a critical period between the time when hostilities cease and the time when it is possible for them to return to their pre-war activities, for an interval more or less lengthy must occur during which it will not be possible to revert to former productiveness, while the question of cost in restoring factories to conditions formerly prevailing will require careful consideration and the preparation of plans to provide the necessary money and capital.

Apart from that aspect there is the certainty that largely increased costs of raw materials, higher wages, and a much greater value on stock in hand or on credit will have to be met, requiring fresh capital, while longer credit may be necessary.

Some of the most important matters with which the committee will be empowered to deal will be the extent of the aid that banks and financial houses will be able to render; if such help should appear likely to prove insufficient, what other sources of credit can be sought; and by what method can the required capital be most efficiently distributed, in the event of a shortage, among essential trades and commerce.

BONDS WITH PRIZES

The British Parliamentary Committee appointed to consider the question of issuing premium bonds has reported against such a step "at the present time or until further efforts have been made to make the present issues more attractive to investors." The committee expressed the opinion that the opportunities of investment for the general public were sufficient to obtain their free support, and that there was a considerable untapped source of investment which might be obtained for war needs by the means of an issue of bonds which would, by its speculative element, attract small investors. The committee, however, doubted whether the amount so obtained would justify a change of such a contentious character in the financial methods of the country, while the legislation necessary for the issue of premium bonds would be difficult to obtain. The committee arrived at the conclusion that from £80,000,000 to £100,000,000 yearly might be expected from sources at present untouched.

This report seems to indicate that as long as revenue can be obtained through the traditional channels, premium bonds will not be accepted by the authorities of the United Kingdom. Some of those opposed to the plan thought that the losers in premium bond lotteries would become tired of participating. Such a failure, after a departure from the old financial methods, might adversely affect future operations.

Prior to the report of the committee, two of the large departmental stores in London opened bureaus for the sale of national war bonds, offering a number of prizes for those who held certain lucky numbers. The prizes were arranged in series to embrace bonds of both large and small denomination, and each purchaser of a bond of whatever amount received a numbered voucher carrying a chance in the lucky bag. The scheme was a great success. While the sale of bonds was in progress, the stores were besieged from morning till night, and a large number of applications also came through the mail. Hundreds of employees were engaged in dealing with the subscriptions, and at Selfridge's alone bonds to the value of £3,378,000 were sold. As most of them were for small amounts, perhaps £5 up to £50, the number of allotments was large. The total proved to be in excess of 300,000. The prizes offered amounted to £5,000 by this firm and £1,500 by Harrod's, whose figures have not yet been announced. These experiments, however, and the parliamentary committee's report, witness the end of premium bonds in the Old Country for the present.

INSURANCE IN MANITOBA

Returns for the Past Year Just Issued by Provincial Insurance Superintendent Ham

The following statements of premiums and losses during 1916 has been issued by Mr. A. E. Ham, superintendent of insurance and fire commissioner of Manitoba:—

Fire and marine	$2,816,505.82	$1,461,802.81
Hail	328,005.15	294,802.81
Life	3,901,059.94	1,102,571.99
Life—matured endowments ..	....	176,166.52
Accident	129,076.70	46,257.55
Live stock	19,685.11	15,629.62
Automobile	75,736.17	32,513.86
Sickness	99,056.02	34,845.14
Employers' liability	133,962.92	44,845.14
Guarantee	158,442.75	48,263.85
Plate glass	23,540.07	11,071.29
Burglary	10,156.31	560.10
Tornado	5,969.34	1,248.07
Other classes	14,336.13	3,040.02
	$7,715,532.43	$3,273,663.31

At November 30th, 1917, there were fifty licensed insurance companies doing business under the Manitoba Insurance Act, classified as follows:—

Fire insurance companies	4
Life insurance companies	6
Hail insurance companies	3
Plate glass insurance companies	1
Accident insurance companies	1
Mutual fire insurance companies	6
Fraternal societies	26
Employers' liability insurance companies	2
Marine and automobile insurance companies....	1
Total	50

Deposit Withdrawals Made.

The following new companies were admitted by provincial license in 1917:—

Employers' liability and workmen's compensation—Security Mutual Casualty Company of Chicago, U.S.A.

Automobile—Merchants Casualty Company of Winnipeg.

The following deposit withdrawals were made:—British Crown Assurance Corporation, Limited, $20,000; Columbia Insurance Company, $20,031.45; Manitoba Farmers' Mutual Hail Insurance Company, $10,000; State Farmers' Mutual Hail Insurance Company, $20,000; Stuyvesant Insurance Company, $20,000, Merchants' Casualty Company, $10,000; total, $100,031.45.

The following companies holding provincial licenses ceased doing business during 1917:—State Farmers' Mutual Hail Insurance Company, Merchants Casualty Company (discontinued automobile business).

The following companies transferred from provincial to Dominion license:—Columbia Insurance Company, British Crown Assurance Corporation, Limited, Century Insurance Company, Limited.

At November 30th, 1917, there were 154 registered companies doing business under the Manitoba Insurance Act, classified as follows:—Fire insurance companies, 42; fire and hail insurance companies, 8; fire and miscellaneous insurance companies, 34; fire and life insurance companies, 5; life insurance companies, 31; guarantee, accident, and plate glass insurance companies, 15; registered mail insurance companies, 1; live stock insurance companies, 1; fraternal societies, 8; steam boiler insurance companies, 1; inland marine insurance companies, 3; plate glass insurance companies, 4; hail insurance companies, 1; total, 154.

Admitted by Dominion License.

The following new companies were admitted by Dominion license in 1917:—Fire—Hamilton Fire Insurance Company, Hamilton, Ontario; Alliance Insurance Company of Philadelphia, Philadelphia, U.S.A. Guarantee—American Surety Company of New York, New York, U.S.A.

The following companies holding Dominion license ceased doing business in Manitoba during 1917:—Canada Weather Insurance Company, Factories Insurance Company, La Sauvegard Life Insurance Company, Capital Life Assurance Company, Hamilton Fire Insurance Company.

At November 30th, 1917, there were seventeen underwriters' agencies doing business under the Manitoba Insurance Act, as follows:—American Underwriters' Agency, The; British and Canadian Underwriters of Norwich, England; British Empire Underwriters' Agency; Calumet Underwriters; Delaware Underwriters; Exchange Underwriters' Agency; Federal Underwriters, Limited; Fidelity (Fire) Underwriters; Mercantile Fire and Marine Underwriters' Agency; Minnesota Underwriters' Agency; New York Underwriters' Agency; Northwestern Underwriters' Agency, of Milwaukee, Wisconsin; Nova Scotia Underwriters' Agency; Protector Underwriters; Rochester Underwriters' Agency; St. Lawrence Underwriters' Agency; Winnipeg Fire Underwriters' Agency.

Special Brokers Licensed.

The following underwriters' agencies ceased doing business in Manitoba during 1917:—Factories Underwriters' Agency; Security National Underwriters' Agency.

The following special brokers licensed in Manitoba during 1917:—Hawkins, W. E., of Messrs. Hawkins & Watson; Hines, J. H., of the Hanbury Hardware Company, Brandon; Menlove, J. F. C.; Miller, H. M., 205 Kensington Block, Winnipeg; Nanton, A. M., of Messrs. Osler, Hammond & Nanton; Pace, F. W., of Messrs. Pace, Harrison, Limited; Reid, J. Y., of Messrs. Robinson & Company, Limited; Ryan, E. C., of Messrs. Ryan Agency, Limited; Winnipeg Insurance & Vessel Agency, G. I. Roberts.

Up to November 30th, 1917, the Manitoba Insurance Department issued 3,196 agents' licenses, made up as follows:—Fire, 1,026; life, 1,226; all other classes, 944; total, 3,196.

JUDGE SOUGHT INSURANCE AGENT

Man Who Has Bought Life Insurance Appreciates It Most

"The duty of the life insurance agent, as of every agent, is to work for the benefit of his principal," said Hon. H. Harvey, chief justice of Alberta, in an address to the Edmonton Life Underwriters' Association recently. "Whatever other agents may lose sight of that fact," he continued, "the life insurance agent is not likely to stray from the path of duty in this respect, because it is only when duty and self-interest conflict that the ordinary individual tends to go astray.

Pointers for Agents.

"There is not one of you," he added, "who does not sincerely believe that when endeavoring to bring about a contract of life insurance he is honestly serving the interest of the person whom he tries to insure and those dependent on him, quite as much as the interest of his company, and this opinion is shared by most thoughtful persons who take any interest in life insurance. The agent, however, is not always entirely an altruist, but, as his commission comes from an effected contract, his personal interest is entirely in harmony with that of the parties to the contract. But while the agent is quite convinced that his proposal is in the best interest of the intended policyholder, it, unfortunately, often happens that the latter, especially if he has never been approached before, is not so sure of it, and upon the ability of the agent to convince him depends his success in the business. If he has not the persuasive qualities, he might better confine his attentions to persons who have already taken insurance. From similar experience from the other side I feel little doubt that a person who has once taken insurance is a much easier mark than one who has not. Indeed, for my last two policies I sought out the agent instead of waiting for him.

"The capable men employed by the companies in working out different plans of insurance have made the work of the agent much more simple than it formerly was. Now, there is a plan that will suit almost every condition, and all the agent requires is to press the right plan.

Most Protection for Smallest Premium.

"Every right-thinking man desires to provide for his wife and children or others who may be dependent on him, so long as they remain dependent, and, because life is uncertain, any such man at once sees the advantage of life insurance. If his income is small, naturally he cannot spare much of it for insurance, and the plan which gives him the most protection for the smallest premium will have the greatest appeal to him.

"Another man may have ample means, but such men are the greatest believers in life insurance, for they have the present ability to pay the premiums, and they know that whatever vicissitudes may come, life insurance is a certain provision at a time when the assured can himself give no aid. To such men the investment feature is the most important, and this side of the business the companies appear to have been developing somewhat extensively of late years.

"The plan which provides for the payment of the policy in monthly instalments extending over a period of years and during the lifetime of the beneficiary will, no doubt, meet with great favor. It is an extension of the plan which was pushed considerably a few years ago, viz., of paying in annual instalments. In the way that plan was presented there was a certain amount of misleading, though perhaps not intentional, for a policy which provides for the payment of twenty annual instalments of $1,000 by no means represents the same value as a policy for $20,000, payable immediately, and the difference is so much greater than the ordinary person who does not stop, or has not the knowledge, to calculate, would think, that its tendency seemed likely to deceive.

No Need for Deception.

"There is no need to deceive in life insurance to make people believe in its value, because the value exists, and in it, as in everything else, the old adage that honesty is the best policy, ought always to be kept in mind, and dishonesty will react against the person or agent resorting to it.

"Some thirty years ago I was persuaded to take a small policy in one of the largest companies. It was on a semi-tontine endowment plan, payable in twenty years, and the estimates given me by the agent indicated most attractive and substantial profits if it was carried through to maturity. A few years before its maturity I asked the company for estimates again. They were furnished, but with a large difference. Now, I would have been disposed to think that, perhaps, investments had not made as good returns or expenses had been greater than had been expected had I not been shown by a man who had just recently taken out a policy of the same kind in the same company, the estimates which had been furnished him by the agent as suitable to his policy, which were similar to the ones received when I took my policy, and very different from those furnished later and the actual results. It may be that the agents obtaining the policies were innocent, but it is hard to think that the estimates given to obtain the policies were honest. When my policy matured I selected the option that at once put an end to any further relations with the company. Such methods as that are, in the long run, injurious rather than beneficial, and I am glad to say that I do not believe there are many companies or agents that would stoop to them. In all my years as a judge in Alberta and the North-West Territories, before the province was formed, no case of a company coming into court and attempting to stand behind any questionable methods, and only one case in which a company resisted payment of a policy, can be recalled. In that case the company succeeded on meritorious grounds. The agent's aim, then, being to convince the prospective insured that it is to his interest to take out a policy, anything that will aid to that end will be useful, and it is in this connection that the law to which I purpose referring has application."

BANK CLEARINGS

The following are the bank clearings for the weeks of January 18th, 1917, and January 19th, 1918, respectively, with changes:—

	Week ended Jan. 19, '18.	Week ended Jan. 18, '17.		Changes.
Montreal	$ 80,606,655	$ 69,197,988	+	$11,408,667
Toronto	57,197,375	56,064,523	+	1,132,852

The Toronto bank clearings for the current week are $62,630,493, compared with $40,745,872 for the same week in 1917, and $49,763,770 in 1916.

Mr. George W. Blaikie, of G. W. Blaikie & Company, will act as attorney for Messrs. Duncanson, How & Company, Toronto, while the partners of the latter firm are in khaki. Mr. Dickson D. How, who is a son of Mr. Thomas F. How, general manager of the Bank of Toronto, yesterday received a commission in the Royal Flying Corps, and Major A. E. Duncanson, who as Capt. Duncanson went overseas with the 36th battalion, is still at the front.

Established in 1836. Incorporated by Royal Charter in 1840.

CANADIAN SECURITIES IN LONDON

Their Record Last Year—Review of the Market

The accompanying table, compiled by the well-known London journal "Canada," sets out the price movements of representative Canadian securities in London during 1917, and the changes as compared with 1916. "On the whole," says our contemporary, commenting on the figures, "although faced with strong competition from the new loans created to carry on the war, Canadian government, provincial and municipal issues have held their ground very well, investors being favorably impressed by the remarkable prosperity of the country and the strenuous efforts it has made in its prosecution. Monthly market movements have, of course, reflected the varying phases of the struggle, but at the close the changes are relatively unimportant in comparison with those recorded at the end of the three previous years. It is of interest to note that the average quotation of a group of Canadian provincial and municipal bond issues is now 82.7 per cent., which compares with 100.2 per cent. at the end of 1913, and affords striking evidence of the drastic adjustments in values resulting from the new interest standard created by the war.

Important Railway Developments.

The past year has been an eventful one so far as the railways are concerned. The incident which stands out with sharpest relief is the report of the Railway Commission appointed to enquire into the railway situation in the Dominion. This body's recommendations aroused much criticism in this country, and was followed later by the announcement of the government's policy in connection with the Canadian Northern and the Grand Trunk Pacific Railway. Whilst increasing traffics have reflected the prosperity of the country, the alarming rise in working expenses has caused much alarm and strengthened the agitation for an advance in rates. The uncertainty of the attitude of the government has deepened the depression, which has latterly characterized this section. Canadian Pacific Railway are about 15 points down for the year, the quotation having recently weakened in sympathy with the American market, the re-imposition of minimim prices in Canada, and the cessation of treasury purchases. The fall in Grand Trunks has been very heavy, the passing of the interim dividends on the guaranteed and preference issues and the obscure outlook accentuating the weakness of the market. At the close prices rallied a little on the success of the new note issue. The government proposals with regard to the Canadian Northern Railway were signalized by sensational movements in the various bond issues, but the income bonds, after rallying at one time, gave way again on the continued absence of dividend.

Events in the Canadian Industrial Section.

"Canadian industrials have been moderately prominent, but final quotations are usually down on the year, reflecting general conditions at the close. The Iron and Steel group has reacted sharply, following its pronounced advance of the preceding year, and there has been less activity in pulp and paper issues. A favorable feature was the substantial recovery in Cockshutt Plow preferred, but the 1 per cent. dividend recently declared had a dampening effect on the hopes recently indulged by holders, and Canadian Car and Foundry preferred, after at one time advancing to 100, fell back heavily on the absence of realization of the dividend anticipations entertained with regard to this company. An unpleasant event was the further heavy fall in British Columbia Electric Railway issues on the hostile attitude manifested towards this company by the city of Vancouver. The deferred stock is now down no less than 80 points from its July, 1914, level, a movement which is not without its significance to those whose action has brought about this serious decline. Montreal Street Railway 4½ per cent. debentures are rather lower; Toronto Power Consolidated 4½ per cent. bonds, which at one time were in the region of 90, have lost a large part of their earlier improvement; and Montreal Light, Heat & Power are also rather lower. Flour milling companies' issues have attracted some attention, but Dominion Textile have reacted sharply. Canadian General Electric, after an early decline, recovered on the dividend being placed on an 8 per cent. basis, and one of the events of the year was the support accorded Canadian Marconis. Hudson's Bays have been a good feature on the improvement in the land sales, and are well up on the year. An incident of passing interest was the consummation of the amalgamation of the Southern Alberta and Canadian Wheat Lands Companies with the Alberta Land Company, which attracted some attention to the shares of the two former concerns at the rubbish prices to which they had descended prior to the merger—a development for which, it will be remembered, we had prepared readers of 'Canada.' Another outstanding feature was the revival in Cobalt mining companies' shares on the remarkable rise in the price of silver, a movement which has been one of the most prominent incidents of the past year, and should still further stimulate silver mining in the Dominion."

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

The extension of the term of various bonds issued by the four cities of Alberta has been the subject of joint discussion by the mayors of the municipalities concerned. The chief question considered was whether or not the legislature had the authority to lengthen the life of the securities without consulting the bondholders.

Commissioner Samis stated at the meeting that he did not think the maturity of all the bonds should be increased to 50 years without regard to the improvements for which they had been issued. He thought that in no case should the maturity be extended for a longer period than the life of the improvement. The officials in attendance admitted the force of this argument.

As to whether the legislature had the power to validate the cities' action the meeting decided that it had. The following is the form in which the recommendation to the Alberta legislature will be made:—

"Notwithstanding anything contained in the charter or any city or any town, village, rural municipality, local improvement or school act, beginning from January 1st, 1918, and notwithstanding anything in any by-law or bond, debenture or other security. the sinking fund for the service of any debt may be reduced to the annual levy which would have been required had the bond, debenture, etc., had an original maturity of fifty years from date of issue, or such lesser final maturity as the council may determine.

"This provision shall not be retroactive so far as to affect any levy which has been or should have been made up to December 31st, 1917, and shall not apply to the property owners' share of local improvement.

"Not less than six months prior to the maturity of the various bonds, debentures, etc., the city, town, village, etc., shall issue, and the provincial government shall guarantee both as to principal and interest, bonds, debentures, etc., for the amount by which the accumulated sinking fund falls short of the amount required to redeem the bond, making all allowance for discount on sale and other expenses.

"Any surplus in the hands of the sinking fund trustees or in sinking fund account may be used to make up the deficiency in the amount required to redeem securities as they mature.

"In regard to the bonds of a town, city or school district, the town or city shall have the right to insist on the school debenture sinking fund being treated in the same way."

Outremont, Que.—The city has sold $700,000 6 per cent. bonds to the firm of Versailles, Vidricaire and Boulais, at 95⅔.

Toronto, Ont.—The city will lend the Harbor Commission $1,000,000 to assist in its summer operations, providing the Ontario legislature will legalize the action.

Ottawa, Ont.—Application has been made to the Ontario Railway and Municipal Board for permission to issue debentures of $250,000 to establish a municipal fuel depot.

Quebec, Que.—Power to borrow $900,000 (and not $500,000, as previously intimated), was requested in a bill of the Montreal Protestant School Commission, in the provincial legislature.

Westmorland, N.B.—Gesner A. Taylor, secretary, reports the county's assessed value of real estate and personal property for 1916 as follows:—Real estate, $5,259,940; personal property, $1,202,950.

King's, N.B.—Geo. O. Dickson Otty, secretary-treasurer, reports the county's assessed value of real estate and personal property for 1916 as follows:—Real estate, $4,216,238; personal property, $721,545.

Calgary, Alta.—The adoption of the scheme whereby the city bonds which mature in the years to come would be given an additional period of life of ten years by securing permission from the legislature to re-sell them upon maturity, was proposed by City Auditor Harvey at a meeting of the city commissioners.

The Bank of Toronto has declared the regular quarterly dividend of 2¾ per cent., payable March 1 to holders of record February 12.

SASKATCHEWAN'S MUNICIPAL FINANCING

Review of Activities Last Year—Telephone Issues Were Large

During the past year the problem of financing the capital requirements of Saskatchewan municipalities has been attended by many difficulties, which, considering the untoward conditions, have been met with a fair degree of success, says a statement issued by the Saskatchewan Local Government Board, which continues:—

"Having in view the circumstances created by the war, and their influence on the security market, the local government board has consistently directed its efforts toward reducing to a minimum the borrowings of local authorities. During the year 1916 debenture issues were reduced to an exceedingly low amount, and the fact that, with the exception of rural telephones, it has been possible to keep the 1917 figures down to the low level of that year is evidence that its efforts in this direction have met with the desired measure of success. A larger amount of telephone debentures has been authorized during this than in any previous year, 391 companies having been given permission to make extensions or construct new lines at a total approximate cost of three million dollars.

Telephones in Rural Districts.

"This seems a large amount, but it has been felt that the extension and improvement of telephone accommodation in the rural districts would be of material assistance in the campaign for greater production, so necessary to the Empire as a means of successfully carrying on the war. Many farmers are located at considerable distance from markets, and it frequently happens that the loss of time in arranging for labor and purchase of supplies, and delays in obtaining necessary equipment and repairs incident upon the remoteness from trading centres, has resulted in serious loss, and consequent impairment of production. With these considerations in view, the board has found it advisable to allow greater latitude in borrowings for this purpose than it would otherwise have done. It has, however, been very careful to restrain operations, so long as financial conditions in the respective localities did not appear to warrant the incurring of added liabilities. Especially have authorizations been refused wherever an inclination to allow taxes to remain in arrears was manifest, on the principle that if laxness in the payment of taxes existed under present conditions, it certainly would prevail to a greater extent when the levies were increased by the amounts necessary to meet telephone debenture payments.

Small Investors at Home.

"Saskatchewan is now fairly well served with rural telephone lines, and it is expected that the rather extensive operations in 1917 will have the effect of greatly lessening the applications in the coming year.

"The board has for some time past recognized the necessity of conserving the larger sources of money supply to the needs of financing the war, and has systematically endeavored to introduce the practice of placing the debenture issues of local authorities with small investors at home. Its efforts in this direction have met with a reasonable amount of success, and many small issues are now being taken up locally. The Victory Loan campaign has proved an invaluable factor in educating the small investor along these lines by impressing upon him his duty to assist the country by placing a portion of his surplus earnings at its disposal and at the same time showing him that this duty can be performed with profit and advantage to himself. It is to be hoped that the effect of these lessons will not be lost through failure to protect the small bondholders against loss by undue depreciation in the value of their securities.

"By an order-in-council, dated December 22nd, 1917, the federal government has prohibited the issue, sale or offer for sale of all classes of securities, including debentures of local authorities, without the permission in writing of the minister of finance. So far as is known at present, it would appear that each issue of debentures must be passed upon and approved by the minister before it can legally be sold."

The Bank of Hamilton has declared the regular quarterly dividend of 3 per cent., payable March 1 to holders of record February 27.

PEGGING PRICE OF WAR BONDS

United States Bankers Said to Disapprove of Plan—Sound Means Must Be Used to Keep Price Up

Mr. H. Z. Osborne, representative in the United States Congress from California, is the author of a bill, styled by him the Liberty Bond Redemption Fund measure, which provides for the creation of a $100,000,000 fund and authorization to the secretary of the treasury to employ all or any part of it in the purchase of Liberty bonds, when these shall be offered below par, for the purpose of maintaining the price of these government obligations constantly at par or better.

Depreciation Gives Concern.

Mr. Osborne, discussing his plan, says: "The depreciation of Liberty bonds, as shown by the daily quotations in the money markets, is the subject of much concern all over the country. The great drive that was made for the sale of bonds influenced thousands of people of small means and resources to make investments, and they were promised by the speakers who temporarily represented the government that the credit of the government would prevent any possible loss. These representations were doubtless made in good faith, and the speakers who made them, though unofficial, were really representatives of the government.

"My idea is that the integrity of the government is pledged to the people who subscribed for the Liberty Loan bonds. Aside from the question of national honor and honesty involved is the one of policy. We will shortly be called upon to subscribe to another large loan, and some means must be devised for maintaining the new loans, as well as those that have already been issued, and the public, whose confidence will have been shaken if depreciation is permitted to go on, will be disinclined to make the necessary subscriptions.

Secretary of Treasury.

"In the matter of operation, I think the secretary of the treasury can be relied upon to handle the fund in a way to secure the purpose—namely, to maintain the price of bonds at par. The secretary of the treasury can use his discretion in buying bonds offered below par, and if there is any conspiracy to depreciate them or if they are depreciated simply through neglect to provide a sustaining fund, this provision for stabilizing will be effective. It will give courage to the banks, and they will take the bonds more freely, and thereby lighten the demands on the redemption fund of the government. My opinion is that a very small portion of the fund will be placed in operation. The fact that the fund of $100,000,000 exists for that purpose will be very effective."

Went Below Par.

Commenting on the plan, the New York Annalist says: "Since the beginning of the European war, and more particularly since the United States entered the conflict and undertook to finance the struggle, various plans have been advanced for the raising of money, and since the flotation of our two Liberty Loans, special attention has been directed to prevent the functioning of the law of supply and demand in respect to the obligations of the United States government.

"For various reasons the price of Liberty Loan bonds in each instance went below par following the closing of subscription books, and more recently both issues of bonds have been selling at a considerable discount from the issue price. This has disturbed many persons, and only recently one of our representatives in Congress proposed legislation making it a criminal offence for any one to sell a Liberty bond at a price less than par. The proposal did not receive any serious consideration from either the bankers or members of Congress.

Is an Artificial Market.

"Now, Mr. Osborne suggests that the secretary of the treasury himself, or through agents, go into the market and, in effect, buy Liberty bonds until the offerings become so small that, by the operation of the law of supply and demand, the price of securities shall move upward, finally to par. Manifestly, this plan contemplates the creation of an artificial market for the Liberty bonds. The questions presented by the bill are: First. Is it morally right for the government to resort to such devices for boosting the market prices of its securities? Second. Will the plan work? Third. What effects would be produced by it? And fourth. How would the government of the United States come out financially?

"Professional stockbrokers have been severely criticized by government agencies and by newspapers whenever they have resorted to schemes designed to boost or depress prices; and it is reasonable to suppose that the people of this country would not look favorably upon the employment of methods by the government which unquestionably are disapproved when practised by individuals. But more important than the verdict of public opinion in respect to the propriety of the government artificially boosting the prices of its securities is the possibility, amounting to a certainty, in the minds of many, that the proposed plan would not accomplish what its sponsor seeks.

Will Offer Bonds.

"In the first place, if such legislation be enacted, the fact that the secretary of the treasury has a fund at his disposal to purchase Liberty bonds, will be a matter of public knowledge, and, when it is generally known that the market is being supported, individuals, banks and corporations, which now have no expectation of liquidating their holdings of Liberty bonds, will offer their bonds for sale. In other words, while at present sales are limited practically to those who find it necessary to dispose of their bonds by reason of unforeseen circumstances—the urgency of the sales is indicated by the fact that holders are willing to lose money by selling bonds at prices lower than they paid—under the proposed plan, the volume of selling would be greatly increased by the filing of selling orders by those who, although unwilling to make a sacrifice by liquidating at current prices, are ready and anxious to convert their bonds into cash the moment facilities may be opened to them by which they can do so without a loss. When it is realized that there are now outstanding nearly $6,000,000,000 of Liberty Loan bonds, the inadequacy of a $100,000,000 fund becomes apparent. The weekly sales of the bonds on the New York Stock Exchange alone aggregate between $8,000,000 and $10,000,000.

United States Bankers Disapprove.

"If the volume of business in Liberty bonds was smaller, and if the total of bonds outstanding was not as large, it would perhaps be possible for the government to support the market by purchases on its own account, but, in view of actual conditions, bankers are practically unanimous in the opinion that efforts to steady the market, and more particularly to raise the price, would be futile.

"How would the government fare were such a plan resorted to? Of course, if the treasury bought back for $96 or $97 what it had sold for $100, it is plain that the government would come out with a net gain and not a loss. The fact that subsequently the government would have to issue securities at a higher rate does not alter the government's position, for it is already committed to grant to holders of securities the right to convert the earlier issues of bonds into those paying a higher rate. The practical question is whether the treasury would have sufficient funds to buy back all the bonds that might be offered; certainly a fund of $100,000,000 would prove inadequate. If the government announced its disposition to buy in all bonds offered at prices below par, the chances are that such large quantities of bonds would be offered that the government would be unable to satisfy all comers. Yet it could not discriminate; it must do for all what it does for one.

Conditions Were Different.

"The idea of artificially supporting the market for a security is not new. It has been done time and again, but in all known instances where the scheme has been resorted to, conditions have been vitally different from those existing in the case of the Liberty bonds,

"In England the chancellor of the exchequer has what is called an 'anti-depreciation fund,' the object of which is to support the market for British securities. Very little is known about the actual operation of the fund, no publicity having ever been given to it, but, according to bankers, the fund, which is relatively small, has not been availed of to boost the price of British loans raised within the United Kingdom, but has been applied to the support of external bond issues, among them those distributed in the United States.

"It is generally understood that the bankers who had charge of the flotation of the $500,000,000 Anglo-French 5 per cent. bonds in this country supported the market from time to time by buying in the bonds when the market appeared to be depressed. Just how large the fund used for the purpose has been is not known, but it is understood that it was fairly substantial. It is also known that while the bankers used the fund to support the market at the beginning—that is, for a short period after the closing of the subscription books—they have not attempted to maintain the issue at par,

J. P. Roberts, Supt. B.C. Branches
V. F Cronyn, Supt. Eastern Branches

and, in fact after the bonds had declined considerably, abandoned all efforts to further support them.

"In the case of the British government secured loans, the American fiscal agents have frequently bought in bonds when the market was unusually weak, and, as a result, have saved to the British government the difference between the issue price and the depressed market quotation. In addition they have been in a position thus to reduce Great Britain's indebtedness here. Such purchases have been almost invariably accompanied by the sale of securities deposited as collateral for the loans, especially if the market price for the collateral proved attractive.

"It has also been reported that in France the minister of finance has a fund for the support of the French war loans, but the facts about the operation of the plan have never been given out, and presumably the fund has been devoted principally, if not exclusively, to the support of external bond issues, among them the Anglo-French raised in America.

"In the opinion of leading United States bankers it is futile to endeavor to bring back the price of Liberty bonds to par by artificial means. It is their belief that by making the next Liberty Loan attractive to investors, thus automatically according the same attractive features to all previous loans by reason of their conversion privilege, the market for the 3½ and the 4 per cent. bonds will promptly improve," concludes our contemporary.

BANK OF NOVA SCOTIA

The directors of the Bank of Nova Scotia have presented an exceptionally strong financial statement to their shareholders. The profits for the year amounted to $1,295,315, an increase of $43,277 over those for 1916, which, added to the $584,654, brought forward from the previous year, made $1,879,969 available for distribution. Of this sum, $10,000 was taken to pay the usual dividend, $65,000 was paid as a war tax on circulation, contributions totalling $44,700 were made to the Patriotic and Red Cross funds, $50,000 to the officers' pension fund, and $150,000 was written off bank premises account. The Halifax disaster made a special appeal to the Bank of Nova Scotia, and the handsome donation of $100,000 out of the year's profits was paid within a few days of its occurrence to the fund established for the relief of its victims. These appropriations left $560,270 to be carried over into the current year as undivided profit, a very gratifying record.

The bank's assets total $138,297,245, an increase for the year of more than $22,000,000. This is only one of many evidences of the bank's strong position. Actual cash on hand and in the central gold reserves as security for the excess circulation amounts to $26,628,000, a sum equal to 22.37 per cent. of the total liabilities to the public. The bank has given its full share of assistance towards the meeting of the present financial situation brought about by the war, and the increase of about $12,000,000 in the various government securities held reflects the extent to which it has participated in loans to the Canadian government and advances to the British government for the manufacture of munitions and for purchases of grain. Railway and other bonds appear for less than last year by about $960,000. The total of bank premises and real estate held is about the same and other items show little change.

The capital and reserve remain unchanged at $6,500,000 and $12,000,000, respectively. The circulation at December 31st stood at $12,171,423, an increase of $4,226,342 over the amount current a year preevious—an indication of the activity in manufacturing and general business brought about by the war and the increased cost of all commodities. Deposits, interest and non-interest bearing, are greater by $16,513,000 than they were a year ago, and the total is now $104,338,171.

One of the strong pillars of Canada's financial structure, the Bank of Nova Scotia has carried that part for eighty-six years, and is the second oldest bank in the Dominion in active operation. The management of the institution has always been conservative, with a proper measure of aggressive action. The result has been shown in a long series of excellent financial statements coming from successful operations which have satisfied the bank's directors, shareholders and clients throughout Canada. Mr. John Y. Payzant is president of the bank, and is supported by an active directorate. Mr. H. A. Richardson, who is general manager, has the implicit confidence of his directorate, and he is ably assisted by Mr. J. A. McLeod, assistant general manager.

CANADA'S CHEESE TRADE IN 1917

Dairy Commissioner Ruddick, in his address at the Eastern Dairymen's Convention recently, gave some interesting figures regarding the cheese trade of the past year. The total cheese handled by the Cheese Commission to December 31st was 1,860,237 boxes, or 155,662,463 pounds. Before the commission began operations, the shipments were 123,909 boxes, weighing 10,656,174 pounds. These, with the balance of the 1917 output still in Canada, make a total of nearly 2,000,000, or 172,620,000 pounds, with a value of $37,544,850, an increase of $4,000,000 over the output of 1916. Canada's exports in 1914 were only 135,000,000 pounds, so that Canada has increased her exports since the war by upwards of 40,000,000 pounds. The value for 1917 was $8,000,000 greater than it would have been if the production had been the same as in 1914.

CREDIT AND WAR

Referring to credit and its war-time relations, Mr. Beaudry Leman, general manager of the Banque d'Hochelaga, said at that institution's annual meeting last week:—

"From every direction appeals are made to work harder and produce more; to renounce luxuries, and already the distinction between the superfluous and the necessary is becoming smaller and smaller; to endeavor to replace the losses in man-power by new generations, mentally and physically fit; to create and encourage the spirit of thrift in the present generation in order that future generations may not falter under the charges of their inheritance; to return to sound economic policies, which, having been neglected by many, will have to be followed by all. One of the most prominent bankers in the United States expressed the opinion recently that, whatever might be the duration of the war and whatever its cost, every dollar spent might be recovered if all citizens acquired the spirit of thrift and could be brought to appreciate the collective strength achieved in a nation by the individual effort and moral value of every citizen.

"Is it not of the most elementary caution for our young country and for all its citizens to follow the rules which have become imperative in older, richer and more thoroughly developed communities? Is it not also of the utmost importance that we become conscious of the strength which lies in co-operation? Banks are credit institutions, and they indicate the measure of confidence that their clients have in them, and still more the measure of confidence they have in one another. Individuals cannot waive their joint responsibility towards public welfare and they cannot isolate their interests from those of the community in which they have chosen to live.

"To increase our farm products, to improve the quality of animal stocks, to adopt more scientific methods of cultivation, such should be the programme of our rural classes in all parts of the country; to reduce the amount of our imports from foreign countries and to increase our exports by developing our natural resources and by perfecting our manufacturing methods, such should be the programme of our industrials; to buy with more caution and to decrease the risks due to over-extension of credit, such should be the programme of our merchants; economy in all classes of the community, from the workingman to the capitalist, such should be the programme of all citizens of this country

"This advice, which one is naturally apt to ignore, wearied that we are by its repetition, appears, however, as the only way to assure general welfare and to give to the business of the country a new impetus."

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental lines for the two weeks in January:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
January 7	$2,238,000	$2,343,000	+ $105,000
January 14	2,417,000	2,368,000	+ 49,000

Grand Trunk Railway.

	1917.	1918.	Inc. or dec.
January 7	$1,012,906	$1,076,606	+ $ 63,700
January 14	1,072,915	905,216	— 167,699

Canadian Northern Railway.

	1917.	1918.	Inc. or dec.
January 7	$ 598,700	$ 565,000	— $ 32,900
January 14	646,100	593,500	— 52,600

EXECUTOR'S FEES

The proper management of an Estate entails skill, experience and labor on the part of the Executor, whether he be an individual or a corporation. The Executor's remuneration, in either case, is a small percentage and it is fixed by the court so that in appointing your Executor the efficiency of the organized Corporation costs no more than the service of an individual. In drawing up your Will, we solicit appointment as your Executor and refer to our thirty five years' experience as a recommendation.

Will Making

THE average human being is very much averse to making a Will; and yet it is absolutely necessary that it be done, if we would dispose of our Estate as we would wish, instead of leaving it to the disposition of the Law.

The making of a Will TODAY will not accelerate death a single instant, but rather tend to make us satisfied with an act timely and properly done.

The Corporate Executor is the only ideal Executor. Consult with us as to the making of your Will. Will Forms Free.

CONTROL OF BOND ISSUES

Quebec Government's Contention and Legal Opinions Regarding Power of Regulation

In the Quebec Assembly last week, Hon. Mr. Mitchell, provincial treasurer, submitted opinions obtained from Messrs. Eugene Lafleur, K.C., and Aime Geoffrion, K.C., before the Quebec government made its protest against the action of the Dominion government in forbidding the issue of provincial or municipal securities without the permission of the minister of finance. These gentlemen said:—

It is clearly impossible to support the provisions of the order-in-council under the authority of sub-section 4 of section 91 of the British North America Act providing for the borrowing of money on the public credit, inasmuch as the order-in-council purports to legislate with respect to, among other things, the borrowing of money on the credit of the province, which is a matter of exclusive legislative jurisdiction on the part of the provincial legislatures.

Power of Regulation.

"Turning to the power of regulating trade and commerce, it is apparent from the preamble of the order-in-council that it cannot by any reasonable construction be regarded as aiming at the regulation of trade and commerce. The object of the measure is to facilitate the borrowing of money by the Dominion by curtailing the Provincial and other powers of borrowing. It is in no sense a measure taken in the interest of or for the regulation of trade and commerce. Except insofar as commercial corporations are concerned, none of the governments, institutions, commissions, municipalities or other public bodies affected by the prohibition, are engaged in trade or commerce, and it is a misnomer to place such legislation in the category of regulation of trade or commerce. There is no commercial element in the borrowing of money on their own credit by provincial governments, municipalities, public utility commissions, hospitals, asylums, ele-emosynary institutions, religious corporations or universities. The suggestion that the order-in-council is intended to regulate trade and commerce may therefore be dismissed as wholly untenable. The mere inclusion, in the list of bodies or institutions aimed at by the measure, of incorporated companies, some of which are commercial, cannot bring it into the category of regulation of trade and commerce."

"Can There Be Any Doubt?"

After quoting cases which have appeared before the notice of the Judicial Committee of the Privy Council as examples to bear out their contention, Messrs. Lafleur and Geoffrion continue:—

"If we apply the principles laid down in these decisions to the case under consideration, can there be any doubt that the Judicial Committee would not extend the Federal power of regulating trade and commerce so as to paralyze the activities and suspend the existence of provincial governments and all the creatures of the provincial legislatures?

"The sinews of war, as well as the funds required for peaceful enterprises, must be obtained under the authority of the fiscal clauses of section 91, and not in virtue of any supposed implied powers. To hold otherwise would not only involve the violation of the most elementary rules of statutory construction, but would be destructive of the autonomy of the provinces. If the necessities of national defence enable the Dominion parliament to over-ride that portion of the constitution which commits to the exclusive jurisdiction of the provinces the power of raising money, which is necessary for their very existence, then the self-governing powers of the provinces will be suspended at the discretion of the Federal authorities.

Legislation is Fiscal.

"Nor can the order-in-council be supported on the ground that it deals with the subject of criminal law. On its very face the legislation is fiscal and not criminal in its nature. It does not aim at the prevention of any offence against public order or good morals, but merely prohibits for a limited time the doing of certain things without the permission of the minister of finance. The very fact that the prohibition is intended to last only during the continuance of the war, and that the certificates of the minister will make the act lawful, is sufficient to exclude this legislation from the category of criminal laws. It is designed to facilitate the financial operations of the Dominion government, and to eliminate the possible competition in the money market of provincial, colonial or foreign governments, and of other institutions, bodies and corporations. It is ear-marked by the preamble as a purely fiscal measure.

"If urgent need of money by the Dominion for war or any other purpose, authorized it to assume full control of the borrowing by provincial governments, it necessarily follows that a similar control could be assumed over provincial powers of taxation, notwithstanding section 92, sub-section 2, which assigns exclusively to the provincial legislatures direct taxation within the province for provincial purposes. This would obviously complete the destruction of provincial autonomy.

"For these reasons," Messrs. Lafleur and Geoffrion conclude, "we are of opinion that the provisions of the order-in-council of 22nd December, 1917, are ultra vires insofar as they purport to affect provincial governments, municipalities, provincial commissions and institutions, corporations and incorporated companies subject to the legislative authority of the provincial legislatures."

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended January 18th:—

Hudson Bay Mines, 64,942; Temiskaming Mining Company, 59,038; Buffalo Mines, 262,255; Dominion Reduction Company, 150,000. Total, 536,235 pounds, or 268 tons.

The total shipments since January 1st, 1918, now amount to 2,343,767 pounds, or 1,172 tons.

IMPERIAL GUARANTEE AND ACCIDENT COMPANY

Despite increased cost of operations and heavy losses common to most accident companies last year, the Imperial Guarantee and Accident Insurance Company, Toronto, managed to make a good showing as a result of operations in 1917. The annual report for that year indicates that the company issued 18,096 policies for insurance of $35,165,701. The premiums thereon amounted to $310,657, being an increase of $42,887. The interest earnings amounted to $19,539, being an increase of $1,053. The assets of the company total $478,031, and the investments are all first-class securities, bearing good interest returns.

The contingent reserve fund amounts to $25,000, and the surplus to policyholders is $312,560, which, together with the uncalled subscribed capital of $800,000, makes the available security for all contracts $1,112,560.

The Imperial Guarantee and Accident Insurance Company has been doing business for thirteen years, and has an excellent reputation for sound principles and prompt settlements. Mr. E. Willans is managing director, and is well posted on underwriting affairs and on business conditions generally. The company's secretary is Mr. Frank W. Cox. Mr. Herbert C. Cox is president, and is supported by an influential directorate as follows: Messrs. Noel Marshall, president Standard Fuel Company, vice-president; R. Bickerdike, M.P., Montreal, director Western Assurance Company; Elias Rogers, Toronto, president National Life Assurance Company, president Crow's Nest Pass Coal Company, Limited; S. Burrows, Belleville, branch manager, the Mutual Life Assurance Company; G. A. Morrow, Toronto, president Imperial Life Assurance Company; D. B. Hanna, Toronto, third vice-president Canadian Northern Railway; W. B. Robb, Montreal, vice-president Grand Trunk Railway; Lieut.-Col. P. G. Goldsmith, M.D., Toronto; W. G. Morrow, Peterboro', manager Toronto Savings and Loan Company; A. McT. Campbell, Winnipeg, branch manager Canada Life Assurance Company; and W. B. Meikle, Toronto, president Western Fire Assurance Company.

The average cost of a family budget of staple foods is still increasing. A return compiled by the department of labor shows that such a budget cost $12.24 in December, as compared with $12.10 for the previous month, $10.10 for December, 1916, and $7.75 for December, 1914. The departmental index number of wholesale prices, based on the average prices of 272 commodities during the decade 1890-1899, was 253.5 for December, as compared with 247.3 for the previous month, 207.4 for December, 1916, and 137.6 for December, 1914.

"INVESTMENTS"

A MUCH MISUSED TERM

Many who should be, and think they are laying up money for their old age, are misled into so-called "investments," where their hard-earned money is jeopardized, and frequently lost, though it is of the utmost importance to them and to those who may be dependent upon them that its absolute safety should be beyond peradventure.

To those who should invest safely and with caution, not speculate, the bonds of the Canada Permanent Mortgage Corporation can be confidently recommended. This Corporation is most conservative in the investment of the funds entrusted to it. For more than sixty years it has held a leading position among Canada's financial institutions, and its bonds are a LEGAL INVESTMENT FOR TRUST FUNDS. They are issued for one hundred dollars and upwards. Write for full particulars.

An Individual as Executor

An individual as executor is mortal. No matter how great his fidelity, his ability, and his experience, he is sure to die some day. In appointing a personal executor, therefore, you should not overlook the possibility that he may die before all your estate is distributed as your will directs.

A trust company is not subject to removal by death before its duties as executor are complete.

EIGHTEEN NATIONS FIGHTING GERMANY

Five Others Have Broken Diplomatic Relations—List of Belligerents

The following nations are now at war with Germany or her allies:—

Serbia, Russia, France, Great Britain, Montenegro, Japan, Belgium, Italy, San Marino, Portugal, Roumania, Greece, Cuba, Panama, Siam, Liberia, China, Brazil and the United States.

The following nations have broken diplomatic relations with Germany:—

China, Costa Rica, Ecuador, Egypt, France, Greece, Guatemala, Peru, United States, Uruguay, Brazil, Bolivia, Haiti, Honduras and Nicaragua.

Declarations of war were made by the following countries on the dates noted:—

Austria v. Belgium, August 28, 1914.
Austria v. Japan, August 27, 1914.
Austria v. Montenegro, August 9, 1914.
Austria v. Russia, August 6, 1914.
Austria v. Serbia, July 28, 1914.
Brazil v. Germany, October 26, 1917.
Bulgaria v. Serbia, October 14, 1915.
China v. Austria, August 14, 1917.
China v. Germany, August 14, 1917.
Cuba v. Germany, April 7, 1917.
France v. Austria, August 13, 1914.
France v. Bulgaria, October 16, 1915.
France v. Germany, August 3, 1914.
France v. Turkey, November 5, 1914.
Germany v. Belgium, August 4, 1914.
Germany v. France, August 3, 1914.
Germany v. Portugal, March 9, 1916.
Germany v. Roumania, September 14, 1916.
Germany v. Russia, August 1, 1914.
Great Britain v. Austria, August 13, 1914.
Great Britain v. Bulgaria, October 15, 1915.
Great Britain v. Germany, August 4, 1914.
Great Britain v. Turkey, November 5, 1914.
Greece (provisional government) v. Bulgaria, November 28, 1916.
Greece (government of Alexander) v. Bulgaria, July 2, 1917.
Greece (provisional government) v. Germany, November 28, 1916.
Greece (government of Alexander) v. Germany, July 2, 1917.
Italy v. Austria, May 24, 1915.
Italy v. Bulgaria, October 19, 1915.
Italy v. Germany, August 28, 1916.
Italy v. Turkey, August 21, 1915.
Japan v. Germany, August 23, 1914.
Liberia v. Germany, August 4, 1917.
Montenegro v. Austria, August 8, 1914.
Montenegro v. Germany, August 9, 1914.
Panama v. Germany, April 7, 1917.
Panama v. Austria, December 10, 1917.
Portugal v. Germany, November 23, 1914 (resolution passed authorizing military intervention as ally of England).
Portugal v. Germany, May 19, 1915 (military aid granted).
Roumania v. Austria, August 27, 1916 (allies of Austria also consider it a declaration).
Russia v. Bulgaria, October 19, 1915.
Russia v. Turkey, November 3, 1914.
San Marino, v. Austria, May 24, 1915.
Serbia v. Bulgaria, October 16, 1915.
Serbia v. Germany, August 6, 1914.
Serbia v. Turkey, December 2, 1914.
Siam v. Austria, July 21, 1917.
Siam v. Germany, July 22, 1917.
Turkey v. Allies, November 23, 1914.
Turkey v. Roumania, August 29, 1916.
United States v. Germany, April 6, 1917.
United States v. Austria-Hungary, December 7, 1917.

The total production of apples in Nova Scotia during the past season was 700,000 barrels.

PROGRESS IN BRITISH COLUMBIA

Mineral Production Was Substantial Last Year—Bank Clearings Large

(Staff Correspondence.)

Vancouver, January 21st, 1918.

Because of great natural resources, British Columbia has been able to recover from the depressing times which came over the large basic industries immediately before the war and during the latter part of 1914. In *The Monetary Times*, a year ago, it was pointed out that never before had all the big industries of British Columbia been going at one time, and that the new industries were shipbuilding, pulp manufacture and paper-making. All these have been operating apace since that time, with the result that never before have provincial figures been so large.

Largest Production on Record.

The greatest year of provincial production was in 1913, when the grand total—minerals, timber, agriculture, fisheries, furs—was $106,475,809. In 1914 it dropped to $100,714,323, and in 1915 it came back to $102,985,495. For 1916 the aggregate will be approximately $126,719,790, while 1917, with its continued production and larger prices, will be still larger. Figures for the last two years for which there are complete records are:—

	1915.	1916.
Minerals	$ 29,447,508	$ 42,970,555
Timber	29,150,000	35,528,000
Agriculture	30,872,901	32,182,915
Fisheries	11,515,086	14,538,320
Furs	2,000,000	1,500,000
Total	$102,985.495	$126,719.790

Increase in Bank Clearings.

That the activity has been general and of increased volume is shown also by the greater bank clearings in Vancouver, business in this city reflecting largely conditions in other parts of the province. Bank clearings in 1915 aggregated $281,575,949, with an increased total in 1916 of $321,585,736, while for the first ten months of 1917 the amount is $337,844,954. The figures for the last two months of the year will give a greater increase than for the previous twelve months. In the days of the past, big bank clearings were brought about by multitudinous real estate transactions, but, as these are comparatively few at present, the bank clearings now represent solid business movement.

General development is shown by the figures of the British Columbia Telephone Company, which have reached a new record. When war was declared it had 42,418 telephone stations in the province, with 25,336 in Vancouver and 8,943 in Victoria. In November, 1915, the tide turned, and at January 1st, 1916, the number was 39,800, and on January 1st, 1917, 42,346. On November 1st, 1917, the total was 44,910, with 26,190 in Vancouver and 9,115 in Victoria. Growth was shown in 38 out of 42 exchanges in the province, particularly in the larger ones, such as Vancouver, Victoria, New Westminster, North Vancouver, Nanaimo and Nelson. Long distance telephone calls in the province totalled 120,692 in January last, while in October the number was 153,676, which is one of the best signs of greater provincial business.

Agricultural Products.

Notwithstanding the fact that many land tillers, owing to enlistments, were absent from their families in 1916, imports of agricultural products showed an increase in value of only 4.65 per cent., and this is largely attributable to larger prices than quantities.

There is every reason to look forward to the future with hope. The shell-making industry may be on the decline, but with other activities this is not noticed to an appreciable extent. Larger trade is offering in every way, the only handicap being lack of ships; manufacturing, based on natural resources, is increasing; facilities are in place for shipment of grain via Canadian Pacific ports; Pacific trade is attracting the larger of the Japanese commercial fleet; the halibut fishing industry is prospering because of the higher prices; mining and lumbering are strong, and conditions are solid in every way, much more so than at any time in the past, and once the world situation is normal the more optimistic expect to see British Columbia stand out very prominently.—R. B. Bennett.

EVERY MAN SHOULD MAKE A WILL

Life Insurance Agents Should Also Encourage the Public to Do It

"What most people understand by life insurance, and what most policies provide for, is payment after the death of the insured, and the insurance agent is therefore from the start discussing the subject of the death of the proposed policyholder and the provision for those dependent on him after his death. That naturally suggests other matters connected with such provision and almost the first thing that would occur to one accustomed to such matters, is the question of a will." So said Hon. H. Harvey, chief justice of Alberta, in an address to the Edmonton Life Underwriters' Association this month.

"Now it is a well-established fact," he continued, "that the great majority of people put off making a will until in many cases it is too late, some on superstitious grounds, but more from the sheer habit of not doing to-day what to all appearances can as well be done to-morrow, and many from a belief that it requires a solicitor to draw a will. Life insurance agents could do a good service to the persons they canvass by encouraging them to make wills.

Fail to Make Wills.

"In most cases it is found that the matter has been neglected. It is because so many men do fail to make wills that our laws have been made very definite as to how the property of a deceased person shall be distributed if he dies intestate, the principle upon which such laws are based, being what appears to be just and therefore what a fair-minded person would probably have decided, if he had made his will. But even though a person may be satisfied to have property distributed as it would be if he died intestate, there is some special views of their own regarding the distribution of their property. If a person makes a will and appoints an executor, the court says: 'The testator trusted him, and we will trust him and allow him to administer the estate without giving security.' If, however, no will is made the court takes the postion that whoever is permitted to administer the estate must give sufficient security to insure its being administered.

Are Usual Beneficiaries.

"The widow and children are the usual beneficiaries, and naturally in most cases no other person cares to take the burden and responsibility of administering and if the value of the estate is considerable, and in many cases when it is not, the widow cannot obtain the necessary security, with the result that a reputable trust company has to take out letters of administration. When the estate is considerable, that perhaps in many cases is really better for the estate than if the widow administered because the trust companies are accustomed to such business and know how to take investments and to safeguard the property as a widow unaccustomed to business might not, but the trust companies, of course, must be paid for their services, and that makes quite a charge on the estate, and when the estate is small, and is therefore more essential to the welfare of the beneficiaries, this charge becomes very important and amounts to a considerable deprivation, but in every case the trust company is not the administrator selected by the person whose estate is being administered, who has the right to take such selection if he wishes to exercise it, and in many cases is not the administrator he would select.

"The advantages of having a will are so self-apparent that it will not often happen that any argument will be necessary to prove them, and if you do not get a risk, but do induce your man to make his will, his sense of security in knowing that if he should die suddenly he has expressed his wishes and done what he can to protect his dependents, will give him a feeling of gratitude to the one responsible for his act, which in itself will be some reward apart from the fact that it may be of some value in inducing him to take insurance at some subsequent time.

Ordinary Layman and Will.

"It is true the ordinary layman will not draw a will in the usual phraseology of a solicitor, but that is really unnecessary. That a will does not contain such a clause as the following which used to be more common than it is at present: 'I bequeath my soul to my Creator who gave it and my body to the ground whence it came,' in no way detracts from its value. The clause is quite unnecessary and is indeed ultra vires because no testator has any right of disposition over either his soul or body, but only over his property, but the clause naturally never did any harm because it simply expressed natural consequences.

"Likewise the usual provisions of a will drawn by a solicitor declaring the revocation of all former wills and directing the executor to pay the testator's just debts and funeral and testamentary expenses, while of some use as an indication to a lay executor is almost equally unnecessary in law, because it is simply expressive of usual legal consequences. All that is necessary in drawing a will is to say plainly what one means. Anyone who can write a letter can draw a will. My wish is not to minimize the value of a solicitor in drawing a will. A will speaks not from the day it is drawn, but from the day of the testator's death. Many things may happen between these dates. Some of the intended beneficiaries may die, or change their position, others who should be protected may be born and many other contingencies may arise. A lawyer accustomed to considering such matters will provide for such contingencies, while a layman in many cases would not think of them.

Must be Signed.

"But if a man wishes a lawyer to draw his will by reason of such things, there is no reason why he should not himself draw one which will answer in the meantime until he can have one drawn by a solicitor or until such contingencies arise because he can do it with little trouble and no expense. The formalities are few and easily understood. The will may be in any one's handwriting or typewritten, but it must be signed at the foot or end by the testator or by some one under his direction for him in the presence of two persons, together, and they must both sign as witness in his presence. These are all the formalities required, but there is another point which is important and that is, that the witness or their husbands or wives must not be persons who take any benefit under the will because the law would not permit them to take the benefit and the provision of the will giving them a benefit would be ineffective, though in other respects, effect would be given to the will.

Wife as Executor.

"A testator who hesitated to appoint his wife executor, because of her lack of business knowledge, could in some cases, have his difficulties solved by the income or instalment policy, for that is not merely an insurance policy, but also an investment of the proceeds. Of course, when undertaking to make this investment, the insurance company goes outside the ordinary business of life insurance and acts more as a trust company, but the investment is made in terms to suit the insured rather than the beneficiary, as would be the case if the money were paid upon the death of the insured, and it relieves the beneficiary of all risk and responsibility and insures the beneficiary receiving the money when and as long as the need for it exists.

"It may be that some who would look with favor upon this method of protection, at the same time would prefer to have something in the way of a capital payment, when the instalments are finished. If it is found that such a plan would meet the wishes of many people, the underwriters' actuaries would have no difficulty in providing a plan that would furnish such a feature."

WORKMEN'S COMPENSATION IN QUEBEC

Hon. L. A. Taschereau's bill amending the Workmen's Compensation Act of Quebec province, which was given second reading on Tuesday, does not include as industrial accidents cases of employees who are affected by diseases common to their particular trade, and brought about because of such work.

In case of absolute or permanent incapacity, the capital of the rents is raised from $2,000 to $2,500. The clause in the present law providing that "if the yearly wages of the workman exceed six hundred dollars, no more than this sum shall be taken into account," is changed to raise the amount of wages to $800. The same clause now adds that "the surplus up to one thousand dollars shall give a right only to one-fourth of the compensation aforesaid." The thousand dollars is raised to twelve hundred, and the balance of the clause is to conform in other particulars with the increase to twelve hundred.

Another clause in the law that is amended deals with the right of the person injured to demand the payment of the capital of the rents to himself or his representatives, instead of to an insurance company. This capital is raised from $2,000 to $2,500 in the bill. This would not affect the present provision of the law which permits the courts to reduce the compensation if the accident was due to the inexcusable fault of the worker, or increase it if it is due to the inexcusable fault of the employer.

TWENTIETH ANNUAL REPORT OF

THE MERCHANTS FIRE INSURANCE COMPANY

Head Office, Merchants Fire Building, 86 East Adelaide Street
TORONTO - - - CANADA

DIRECTORS:
RALPH E. GIBSON, President.

SURGEON-GENERAL G. S. RYERSON,
1st Vice-President.

JOHN H. C. DURHAM,
2nd Vice-President and General Manager

R. H. GREENE,
W. S. DINGMAN

BLOSS P. COREY
NATHAN H. STEVENS
DR. JAMES R. DURHAM

J. W. SCOTT
WM. PRENDERGAST.

FREDERIC P. WYTHE,
Assistant Manager.

ALBERT J. WALKER, C.A.,
Auditor.

R. WILLIAMSON, C.A.,
Auditor.

REPORT OF DIRECTORS

To the Shareholders:—

Your Directors beg to present the Twentieth Annual Report covering the year ending December 31st, 1917, together with the usual Cash Statement and Balance Sheet of Assets and Liabilities, duly certified to by the Auditors and passed for publication by the Superintendent of Insurance for the Province of Ontario. You will be particularly pleased to learn therefrom of the continued success of the Company, and of the marked progress made in every department. The Premium Income was substantially increased, while the Net Earnings, after providing for all Provincial and Federal Taxes, are the largest in the history of this Company.

The Premium Income, Interest Receipts, Building Rentals, Commission on Re-Insurance and Endorsement Fees were respectively, $316,110.68; $15,306.74; $4,045.00; $965.97 and $295.58, making a total income $336,623.97.

The Net Profit on the year's operations was $80,498.09. A Dividend of ten per cent. (10%) on the paid-in Capital Stock of the Company has been declared therefrom and the balance carried to the credit of Profit and Loss Account.

The Amount at Risk now stands at $49,670,297.00. The number of policies in force is 44,186, an increase of 2,920. The average risk per policy is $1,124.10.

The Expense Ratio for 1917 was 33.93 per cent., as against 33.97 per cent. of the previous year. The Fire Loss Ratio was 39.01 per cent., and the Profit, 27.04 per cent. of the Net Premium Income.

The fund deposited with the Ontario Insurance Department for the security of Policyholders is $106,500.00, and in addition to being greatly in excess of Statutory requirements, is the largest made by any Canadian Fire Insurance Company.

The affairs of the Company are in a sound, healthy and a very satisfactory condition, and the Shareholders are to be congratulated upon the efficiency of the present management. The Assets and Surplus were again substantially increased during the past year, and there is not a doubtful security or account of any kind carried on the books. The business written during 1917 was kept up to the high standard set in the past, and the increase of premiums during the year was satisfactory. Excluding the special Federal and Provincial War Taxes, the Expense Ratio was 31.10 per cent., which is quite below the average. The Books, Vouchers and Securities of the Company were continuously audited and examined during the year, and Agency Accounts were promptly collected.

All of which is respectfully submitted

RALPH E. GIBSON, *President.*

Toronto, January 22nd, 1918.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Ontario Brick Company.—The plant of the Ontario Brick Company at Oakville was sold by the liquidator, Walter Ward Price, Toronto, this week to Mr. F. W. Palfield, of Montreal, who represents eastern interests. The price paid was $250,000.

Canada Foundries and Forgings Company.—The regular dividends of 1¾ per cent. on the preferred and 3 per cent. on the common stock of the company to shareholders of record of January 31, payable February 15, were declared at a meeting of the directors.

Price Brothers, Limited.—The declaration of a bonus of 2 per cent. on the common stock was announced recently. This is the first extra payment that company has yet made, and must be added to the regular rate of 6 per cent., which was inaugurated in September, 1916. The bonus is payable February 15 to stock record of February 1. The common stock amounts to $5,000,000.

Porcupine Crown Mines, Limited.—The financial statement presented to the shareholders at the annual meeting on January 23rd, showed a decrease in production, the value of the ore produced during the year being $364,703, as compared with $575,604 in 1916. After paying for mining, milling, allowing for depreciation, taxes, etc., the mining profits were $109,421, against $270,430 in 1916.

Timiskaming Mining Company.—The financial statement for the year ended December 31 last shows considerably larger earnings due to increased output at the mines. Earnings totalled $875,782, as compared with $708,877 in 1916. After deduction of charges, profits were $544,342, as against $352,890, the previous year. Profit and loss statement shows payment of $375,000 dividends, as against $225,000 in 1916. Depreciation charges totalling $25,785 were written off and a total balance of $814,556, including previous balance of $670,999, carried forward to new account.

National Breweries, Limited.—The financial statement for the year ended October 31st, 1917, shows a contraction of $28,000 in net profits as compared with the preceding year. In 1913 the net profit was $516,355, but since then the company has been retiring out of earnings $80,000 bonds annually, the outstanding issue being now down to $1,752,000, as against $2,000,000 in 1913. There was a net surplus the past year of $33,048, equal to about 1.5 per cent. on the common stock, against $57,985, or 2.5 per cent., on the common in 1916. The total assets are $8,010,559.

Western Canada Investment Company.—According to the latest report the amount advanced by the company on mortgage at the end of June last, was about the same as twelve months before, but a decrease of £9,000 occurred during 1915-16, and it seems probable that the average amount out on mortgage throughout 1916-17 was lower than in the previous year. The property that has come to the company under foreclosure has risen from £4,627 to £7,107, and that amount is not earning interest. In view of large amounts of debentures falling due in the next few years the directors considered it wise to rearrange the debenture issue, and they obtained the extension of these obligations for several years. The extension of the currency of the debentures has entailed an increase in the annual charge, and the rates now average 5½ per cent. A portion of the debentures receive a bonus of £3,620 in place of additional interest; of that bonus £1,620 has already been charged and is included in the accounts, and the balance of £2,000 is to be paid in two annual instalments. The debenture interest and bonus are a heavier charge, and an extra £1,000 had to be paid in income tax. The commission on debentures was also greater, and the net profit is £3,000 less at £6,752. From the profit the directors propose to write £500 off preliminary expenses, to add £1,000 to reserve, and to pay a final dividend of 3 per cent., making a total of 5 per cent. for the year. This is the same rate as was paid for the previous year, but a reduced balance is carried forward.

MANITOBA'S FIRE WASTE

Principal Property Losses Last Year Involved $1,362,156 —Eleven Lives Lost

The principal fires in Manitoba last year involved a financial loss of $1,362,156, according to the report for 1917 of Mr. A. E. Ham, superintendent of insurance and fire commissioner for Manitoba. There were also eleven lives lost in fires.

"Many of the fires, upon investigation," says Mr. Ham, "have been found to be the result of gross carelessness on the part of the individual concerned. A large proportion of fires is due to preventable causes, such as the accumulation of paper, wood and other inflammable material in places where contact with heat or the accidental dropping of a match, cigar or cigarette stub sets up a conflagration, resulting in great loss both in money and human life. Only by the continuation of educationary methods can the public be made to realize that all loss by fire is a loss to the community, and is not covered by the money paid over by the insurance company, as the excessive risks accepted and high ratio of fire loss sustained by the companies has to be compensated for by the high rate premiums that the general public are compelled to pay.

Destruction of Food.

"The destruction of food values in elevators, wholesale houses and mercantile stores amounting to over $500,000 at a time when food conservation is specially necessary, demands from those having charge of these properties the greatest possible efforts to prevent such disastrous fires.

"The destruction of one hundred and two barns and outbuildings has caused great inconvenience as well as monetary loss to the farming community.

"Two hundred and ninety-five fires in household dwellings have caused losses amounting to $155,847, and the burning of two quarry plants and one fishery plant has resulted in a loss of $286,384."

Ninety-two fires resulting in a monetary loss of $136,860 were directly due to carelessness in the use of tobacco and matches. Forty-five fires with $28,662 loss were caused through defective construction of chimneys. Four fires involving $193,734 loss arose from electric wiring.

Better Building Inspection.

Mr. Ham is of the opinion that the municipal and civic authorities should institute more effective building inspection, so that many fires in the future will be prevented.

One thousand and ninety-six fires were reported to the Manitoba Fire Commissioner's office from January 1st, 1917, to December 31st, 1917. Of these, 613 involved losses in Winnipeg and 483 in the balance of the province. The financial loss reported was as follows:—Winnipeg, $501,051; balance of the province, $861,105; total, $1,362,156.

The principal causes of fires reported in the province were as follows:—

No.	Cause.	Amount of loss.
15	Burning of rubbish	$ 52,320
58	Carelessness with matches	96,998
5	Carelessness with candles	37
34	Careless smokers	39,872
1	Cigarette stub	15
1	Coal gas	1,939
45	Defective chimneys	28,662
3	Defective fire-places	204
84	Defective and overheated stove-pipes	58,835
9	Explosion of coal oil lamps	4,381
9	Explosion of coal oil lanterns	8,190
4	Explosion of coal oil stoves	2,782
10	Explosion of gas in coal stoves	7,113
4	Electric wiring	193,734
2	Electric motors	167,136
8	Electric irons—current left on	7,766
1	Gasoline explosion	300
10	Hot ashes placed near wood	1,544
4	Heated bearings	212,613
44	Lightning	20,986
1	Overheated stove	50
2	Plumber's torch	57
24	Sparks from chimneys, stoves and locomotives	49,534
9	Spontaneous combustion	51,776
1	Steam pipe, jute and cotton waste in contact	560
4	Suspicion of incendiary	102,810
1	Bon-fire	16
21	Prairie fires	6,286
2	Grease boiling	137
2	Adjoining premises	35
1	Electric toaster	22
3	Electric light bulbs	65
2	Painter's torch	172
4	Electric current—street cars	209
21	Back-firing of automobiles	3,020
589	Unknown (including elevators, barns, etc., cause not ascertained)	242,080
		$1,362,156
57	Fires have been reported with insurance amounting to (which have not yet been adjusted).	$ 104,750
1,096		

Principal Property Losses.

The principal property losses reported in Manitoba during the year were:—

No.	Cause.	Amount of loss.
7	Elevators	$ 228,762
10	Wholesale houses	263,269
43	Mercantile stores	170,964
102	Barns and out-buildings	75,360
5	Apartment blocks	26,279
16	Schools	4,630
3	Hospitals	500
2	Halls	7,050
2	Foundries	9,500

5	Churches	8,571
542	Miscellaneous	115,607
57	Reported and unadjusted	......
1,096	Total	$1,362,156

CANADIAN PACIFIC RAILWAY AND THE STATE

The Wall Street Journal, New York, publishes a leading editorial on what is described as a "flare-up in Western Canada over the agitation for government ownership of all the railways, including the Canadian Pacific."

"Not all of the co-operative socialists, advocates of state socialism and proponents of what is called communality, from all the farmers, mercantile and lumber associations combined, could transfer the Canadian Pacific Railroad to the government, even were the government itself willing," the editorial insists. "They could eat it up, but they could not hold it a single instant, as it is known to-day and at its value to them to-day, after they got it. . . . Canadians need not go one step beyond their own border to decide whether a government-owned road can maintain its most valuable asset. It is just because it cannot be done that part of the prairie press has for some months past wished to make up the deficits of the government-owned roads by expropriating the Canadian Pacific's current profits. The idea is a chimera. There would be no profits to divide up.

"Less than one-sixth of the company's stock is owned by Canadians; less than one-seventh of the shareholders are Canadians. Canadians are both honorable and capable in business matters. Certainly they would not disturb that one security which has contributed most to the country's growth, and has by its stability and merits lifted Canadian investments to a position of great repute and strength in the financial markets of the world, without at least consulting these shareholders."

"If they did, no one would suffer more than the great farming classes of the west, whose exports would no longer receive price stimulation from a growing foreign investment market which constantly rectifies the inequalities of adverse Canadian trade balances. Western Canada's deadliest enemy has been the ghost of single tax. It has successfully withstood that temptation to reaction and decay. On grounds of both good faith and expediency, it will not 'Trans-continentalize' the Canadian Pacific."

AUDITORS' CERTIFICATE

We have examined the books and accounts of The Bank of Nova Scotia at its Chief Office and have been furnished with certified returns from the Branches, and we find that the above statement of Liabilities and Assets as at December 31st, 1917, is in accordance therewith. The Bank's investments and the securities and cash on hand at the Chief Office and at several of the principal Branches of the Bank were verified by us as at the close of business December 31st, 1917, and in addition we visited the Chief Office and certain Branches during the year, when we checked the cash and verified the securities and found them to be in agreement with the books. We have obtained all information and explanations required, and all transactions of the Bank which have come under our notice have, in our opinion, been within the powers of the Bank. And we certify that the above statement of Liabilities and Assets as at December 31st, 1917, is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

BIG SUM FROM FARM PRODUCTS

Prairie Provinces' Grains, Livestock, Dairy Products, Etc., Brings $364,000,000

For four months of the crop year for the grains and 12 months for livestock dairy products and wool, the three prairie provinces of Manitoba, Saskatchewan and Alberta, have received $364,000,000 and have a lot of produce still to sell. This is according to estimates of Miss E. Cora Hind, commercial and agricultural editor of the Manitoba Free Press. Moreover farmers and their families have had in addition an abundance of good food for themselves and their livestock. The whole community of the west has shared in their prosperity. "It is a showing that, in view of the shortage of labor, is magnificent," says Miss Hind.

Wheat has made an unusual showing, due not only to the high fixed price, but to the largest percentage (nearly 75 per cent.) of No. 1 Northern and better.

The Manitoba Free Press estimate of the crop in September last was 214,000,000 bushels, and so far, there has been no valid reason for altering that estimate. This would leave 102,013,000 uninspected. Of that amount, some 20,000,000 is in interior elevators, and at least 5,500,000 in transit. This leaves 75,000,000 bushels in the hands of farmers, of which 25,000,000 will be required for seed, leaving 50,000,000 still to come forward. As the price is fixed, there is no difficulty in arriving at the value of the uninspected grain. Taking it at the price of $2.18, No. 2 Northern basis, it is worth $222,288,340, bringing the total value of the wheat crop alone to at least $460,797,500.95. The actual wheat inspected is larger than for the same period last year, and, in addition, has the advantage of the high fixed price. In spite of the advance in prices of many things which the farmer uses and must use, there is a handsome profit in these prices.

The crop of all coarse grains is small, and this comes out strikingly in the small amounts of coarse grains inspected compared with 1916. The price for these has been high, and the amount received large.

Cattle, Sheep, Hogs.

Quite as startling as the figures from wheat are the returns from livestock, $57,747,762.50 for cattle, sheep, hogs and horses are the returns from Winnipeg, Calgary and Edmonton, the three great livestock markets of the west. These figures do not take into account what is consumed on the farms and in the small town and village, never passing through any yard, nor does it account for the stock which goes direct to the yards of the packing houses at Edmonton without passing through the Union yards at all. Every stockyard has been severely taxed for room, and plans are under way for large extensions at Winnipeg.

The actual increase in cattle receipts at Winnipeg for the year was 127,702 head. Of the total receipts, Manitoba contributed 112,554, Saskatchewan 137,357. Alberta 33,622 and eastern provinces 2,992. The local consumption was 113,871 head, 83,258 head went east and 37,877 head, mainly stockers and feeders, went west, 52,013 head went south.

As to Stockers.

In all, 73,914 head of stocker and feeder cattle were received, and it shows the improvement in conditions, when out of this number only a few of 20,000 head went south, as against 21,000 out of 50,672 went south in 1916.

Manitoba led the western provinces in the number of feeder cattle taken, absorbing 14,372 head, against 12,720 to Saskatchewan, and 9,231 to Alberta, eastern Canada took 17,096. This movement east was materially helped by the Dominion government paying half the freight on cattle going east for feeding purposes. The movement of heifers back to the farms was also stimulated by the Dominion government paying the entire freight on car lots.

Hogs have Increased.

The hog movement shows a marked increase over 1916, but was much below 1915 and 1914, and even at this, it is probable that there was more liquidation of hogs than should have been. The fact that the United States got 6,122 head, against 682 last year, and that this movement was practically all in the months of November and December, indicates that a number of breeding stock that should have been held in the country, got away. The average price of hogs during the year was practically $5 per cwt. higher than in 1916. There were 5,467 hogs shipped west, and these were mainly young feeders and sows. Eastern Canada got more of our hogs than did the local packers by about 15,000 head.

Manitoba was the heaviest contributor of sheep, sending 14,119 to market. The west got from Winnipeg 4,127 head; this appears to have been mainly foundation stock for new herds.

There were 13,574 horses passed through the yards, and of these the east contributed 11,243, showing that the west is not yet meeting her own requirements for horses.

At Calgary and Edmonton.

The Calgary yards, like those at Winnipeg, enjoyed a very busy year, doing an especially large trade in horses, 25,703 passing through their yards in 1917. There is nothing in the figures sent out to indicate where all these horses came from. The increase in the total value of livestock handled was over five million dollars.

Last year, when the annual figures were made up, Edmonton Union Stock Yards had only been in operation three months, but they made an excellent showing. This year their record is one to be proud of, and indicates the growing importance of the livestock industry in the north country. Under the Dominion government arrangement for paying freight on females, 1,500 head of heifers were shipped from these yards to the Peace River country.

Edmonton is a great distributing centre for feeder stock, and during the year 17,955 head of feeder cattle, 4,543 calves, 935 dairy cows, 3,361 breeder and feeder hogs, 2,326 feeder sheep passed through these yards on to farms mainly north of Edmonton.

The top price paid for cattle at Winnipeg was $15 per cwt., and for hogs $18.60. At Calgary the top price for cattle was $10, and for hogs $18.75.

Wool and Dairy Products.

One of the features of the year has been the prominence both in quantity and financially of the wool clip. This proposed Dominion-wide scheme for co-operative marketing will give added zest to the work of the present year. All sheep sales during the year have been extremely successful, both from the standpoint of prices received and quality of stock offered. They of "the golden hoof" have come to stay in western Canada.

It has not been possible to secure the figures of the amount of dairy products produced and sold in Alberta. They are undoubtedly far in advance of 1916, when the production was valued at over two and three-quarter millions. Later in the month these figures will be available. The delay is understood to be through a new system of making returns.

In Manitoba.

Manitoba has had a most prosperous year in spite of high priced feed and labor. The total increase for the year from the sale of all dairy products for which figures are obtainable is $1,412,016.26.

One very notable feature of the report is decrease in dairy butter making and the enormous increase in creamery butter making. This is much as it should be. The province has enjoyed an excellent export trade with most satisfactory reports as to quality of product and its acceptability with consumers both at the coast, in the eastern provinces and in Great Britain.

Cheese output has increased also, though increase here is not so marked as could be desired.

In regard to price the increase to the farms per pound of butter fat over 1916 was 7.5 per pound.

The commissioner of dairying, on this report says: "The increase in the output of creamery butter and cheese manufactured is most encouraging, notwithstanding the very heavy enlistment from the agricultural population. Owing to this fact the securing of satisfactory help on the farm was very difficult, and in many instances impossible. In view of these conditions it is particularly gratifying to be able to report the above increase. While making every effort to increase the volume of business, the quality of cream supplied to the creameries, and the quality of the butter manufactured, has always taken precedence over volume. The grading of cream and butter, and the payment on the basis of quality, combined with the installation of equipment for the proper pasteurization of the cream, has been the means of improving the quality of Manitoba creamery butter to such an extent that we have been able to build up a strong export trade.

"During the year 1917, 90 carloads of creamery butter, totalling 2,000,000 pounds, have been exported from the province to points both east and west. When we take into consideration that in the year 1917, 55 carloads were imported to supply the needs of our own market, the change which has taken place is very gratifying, indicating a marked tendency towards mixed farming. The increase in output is general

all over the province, but more noticeable in the districts between Lakes Winnipeg and Manitoba."

Saskatchewan has had a good dairy year, though the actual amount of creamery butter made is slightly under that of 1916 and no figures are furnished by the department as to actual amount of dairy butter. The returns in dollars and cents show an increase over 1916 of $3,130,000, but this is explained by the statement that the values given in 1916 were relatively too low. The return of $8,600,000 from dairy products is a most satisfactory one.

The Dominion government returns on root and fodder crops, which are the only ones available for these crops, have not come to hand so that the value, $20,000,000, placed on them is an estimate only. It is, however, a very conservative one, as the value in 1916, when prices were decidedly lower, was nearly $18,000,000.

There are no returns for either poultry or eggs. Up to the present time the province has not established any very definite or uniform method of securing and tabulating these figures, which are yearly growing more important. The value of poultry and eggs this past season must have run into the millions.

RECORD PREMIUM ON EXCHANGE

Canada Pays It—Gold Embargo May Be Met by Loan—New York Funds in Montreal Since 1913

While the general foreign exchange market is more or less stagnant, and, in the case of sterling, for instance, suspended by arbitrary measures, the exchange rates between New York and Canada still respond sensitively to the varying conditions of finance and trade between the two countries, says the Wall Street Journal. Since the first of the year the rate for New York funds at Montreal has been moving to a high premium, which now has reached $13.125 per $1,000, or 1 5-15 per cent. premium. This is the highest premium recorded for New York exchange. Our contemporary adds:—

"The recent movement in Canadian exchange, while along the lines usually manifested at the beginning of the year, bears striking contrast to the quotations of a few months ago. It will be recalled that towards the close of last year the quotation for New York funds at Montreal fell to such a low discount that it was causing embarrassment to Canadian bankers. So much so, that a delegation went to Washington and consulted with the Federal Reserve Board to obtain relief by the release of some gold. The board accordingly authorized that a total of $25,000,000 gold might be shipped across the border if required, the gold to be returned when exchange made it convenient.

Suspension of Embargo.

"But the gold was never sent, the mere fact of the temporary suspension of the gold export embargo was sufficient to break the Canadian exchange situation, and New York funds immediately began to move towards parity again. The reason for the heavy discounts at that time was the sale of Canadian grain bills in this market against exports to the other side, added to the fact that a strict embargo had been put on gold shipments out of the counry. Canadian gold shipments in former years, even though small, were sufficient to relieve the autumnal demands.

"The reason New York funds have now swung in the other direction is because there is very little exchange 'making' with the suspension of the grain shipments. Added to this is the fact that Canada is a heavy purchaser here of steel and other material for the manufcture of war supplies for Great Britain, which is causing a drift of funds in this direction.

Conserving Gold Supply.

"If there was any reproach against Washington treasury officials last year for being too exacting in the matter of the gold embargo, it would seem that the Canadian authorities are now susceptible of the same criticism, for they are also disposed to conserve their gold supply. A New York loan to Canada would help the situation at the present time.

"Shortly after the outbreak of war, in 1914, New York funds at Montreal went to as low a discount as the present premium rate."

The following table shows the high and low for New York funds in Montreal, by months, since 1913, the quotations being expressed in 64th, "P" representing premium and "D" discount:—

		High.	Low.		High.	Low

MONTREAL TRUST COMPANY

The Montreal Trust Company at the annual meeting of shareholders held last week, reported profits of $164,086 for 1917, after providing for all charges—the best year in the company's history.

With the balance carried forward from a year ago the total available for distribution was $234,423. Dividends took $80,000, $9,711 was set aside for special war taxes, $7,200 contributed to the Patriotic Fund and like purposes, $50,000 transferred to reserve and $20,000 to contingent account. The balance carried forward to profit and loss was $67,511.

The following directors and officers were elected: Sir Herbert S. Holt, president; A. J. Brown, K.C., vice-president; Lord Beaverbrook, J. E. Aldred, Geo. Caverhill, C. A. Crosbie, Hon. N. Curry, Hon. R. Dandurand, G. H. Duggan, F. G. Donaldson, Hon. W. J. Hanna, F. P. Jones, Wm. Molson Macpherson, C. E. Neill, E. L. Pease, Hugh Paton, Jas. Redmond, F. W. Ross, Hon. W. B. Ross, A. Haig Sims and Stuart Strathy.

FINANCE MINISTER CONFERS WITH BANKERS

The disturbed condition of the exchanges and the possibility of New York funds in the Toronto and Montreal markets rising to a prohibitive price engaged the attention of Canadian bankers in conference at Toronto with Sir Thomas White, finance minister, on Saturday last. If the Wheat Export Company continues to use its credits for wheat purchases it will not be long before the exchange situation rights itself. This company, which is the purchasing agent of Great Britain, is in possession of a credit of $250,000,000 for the purchase of Canadian wheat, a loan for this purpose and for that amount having been made by the United States to Great Britain. The company were sellers of New York funds in the Canadian market last week.

The bankers also discussed the probability of further government financing later in the year, the consideration as to whether gold should be shipped to correct the exchange markets, and the outlook for the Victory Loan.

"Canada leads the world in production of wheat per capita," said Dr. C. A. Zavitz at the opening session of the Western Ontario Farmers' convention at Stratford last week. "Our production is seventy and a half bushels per head of population. Argentina, which ranks next in this respect, produces fifty-six and a third bushels, per capita, and the United States forty-five and a third. Canada's exportable surplus of wheat is six times that of the United States."

LIFE INSURANCE LEGISLATION

Differences in Provincial Legislation Affecting Life Insurance Contracts in Canada

BY WILLIAM B. TAYLOR, B.A., LL.B.

(Third Article.)

New Brunswick.

Beneficiaries:

A. Same provision applies as in Ontario.

Beneficiaries are as follows 1. Ordinary beneficiary.
2. Preferred beneficiary.
3. Beneficiary for value.

The insured may revoke the interest of an ordinary beneficiary as provided by the act and appoint a new beneficiary or declare the policy payable to himself or his estate.

Preferred Beneficiaries:

B. This class consists of husband, wife, children, grandchildren, mother, sisters, brothers or father of the insured.

The appointment of a preferred beneficiary creates a trust in favor of such beneficiary and withdraws the control of the insurance except as to apportionment within that class or appointment of another member within that class. If one or more or all of the designated preferred beneficiaries predecease the insured he may declare the share of the person so dying for the benefit of himself or his estate or any other person, and in default of such new appointment such share shall be for the surviving designated preferred beneficiaries in equal shares, and if no such survivor for the benefit in equal shares of the insured's children, and if no surviving children, shall form part of his estate.

Nova Scotia.

Beneficiaries:

A. The insured has full power to insure his own life at his own charge and make the policy payable to any beneficiary, and may revoke the interest of an ordinary beneficiary at any time and make the insurance funds payable to himself or otherwise, as he may elect.

In case of the death of an ordinary beneficiary and no new appointment is made the surviving beneficiaries shall take, and if all the beneficiaries predecease the insured, the policy shall be for the benefit in equal shares of the surviving insured's infant children, and if none such, shall form part of his estate.

Beneficiaries are as follows 1. Ordinary beneficiary.
2. Preferred beneficiary.
3. Beneficiary for value.

Preferred Beneficiaries:

B. Preferred beneficiaries consist of the husband, wife, children, grandchildren and mother of the insured.

The appointment of a preferred beneficiary constitutes a trust and withdraws the money from the control of the insured except as to apportionment and as provided in the act.

Of the death of one or more of the preferred beneficiaries the insured may make a reappointment and in default of so doing the designated surviving preferred beneficiaries share equally.

Prince Edward Island.

Beneficiaries:

A. Same provision applies as in Ontario.

Ordinary beneficiaries may be designated and their interest revoked in same way as in Ontario. On the death of a beneficiary if no appointment made the surviving beneficiaries take equally, and if no survivors the insurance is for the benefit in equal shares of the insured's children, and if no surviving children his estate is entitled.

Beneficiaries are as follows 1. Ordinary beneficiary.
2. Preferred beneficiary.
3. Beneficiary for value.

Preferred Beneficiaries:

B. This class consists of the husband, wife, children, grandchildren, mother, father, brothers and sisters of the insured.

The appointment of a preferred beneficiary creates a trust same as in Ontario. Upon the death of one or more or all of the designated preferred beneficiaries the insured may make a new appointment and in default the surviving preferred beneficiaries shall share equally, in default of surviving preferred beneficiary the benefit goes in equal shares to the insured's children, if any, otherwise to his estate.

Newfoundland.

Beneficiaries:

A. Practically the same as in Ontario.

Beneficiaries are as follows 1. Ordinary beneficiary.
2. Preferred beneficiary.
3. Beneficiary for value.

The insured may revoke the interest of an ordinary beneficiary at any time by suitable writing and declare the policy payable to any other beneficiary or to himself or his estate.

If one or more of the beneficiaries die in the insured's lifetime and no disposition is subsequently made by him, the insurance shall be for the benefit of the surviving beneficiary or beneficiaries in equal shares if more than one, and if there fault of a new appointment the insurance shall be for the benefit in equal shares of the surviving infant children of the insured, and if none, it shall form part of his estate.

Preferred Beneficiaries:

B. Preferred beneficiaries include husband, wife, children, grandchildren and mother of insured.

The interest given to a preferred beneficiary creates a trust in favor of such beneficiary and the insured has only power to apportion the insurance among the preferred class.

If one or more or all of the designated preferred beneficiaries predecease the insured, he has power to make a new appointment, but only among the preferred class, and in default of a new appointment the insurance shall be for the benefit of the survivor or survivors of such beneficiaries in equal shares.

(To be Continued.)

[The articles of Mr. Taylor, of which the above is the third, will be reprinted by *The Monetary Times* in pamphlet form and will constitute a valuable reference. Orders are being received now.]

BANK D'HOCHELAGA

A very satisfactory statement was presented at the annual meeting of the Banque d'Hochelaga last week. A comparison of the figures of the statements for 1917 and 1916 shows the following changes: Bank note circulation has increased by $1,945,360, deposits not bearing interest have increased by $953,564, deposits bearing interest by $3,175,890, giving a total increase in the amount of deposits of $4,129,454. Cash assets of the bank show a strong position: gold, silver and Dominion notes amounting to $4,666,737, not including $2,000,000 deposited in the central gold reserves. Liquid assets now reach $22,584,429, against $15,977,630 in 1916, being an increase of $6,606,799 for the year, representing over 51 per cent. of total liabilities to the public, not including $2,386,939 of loans to municipal and school corporations. Liquid assets have increased considerably in the course of the past year, and, nevertheless, the bank has increased its loans to municipal and school corporations of an amount of $1,111,216, and its current loans to customers by an amount of $1,364,026.47. The progress of the bank is shown by the increase of its total assets, which amounted to $31,894,709 in 1913, to $34,515,873 in 1915, to $41,861,527 in 1916, and which now total to $51,429,047.

The profits and loss account shows net profits of $565,433, being an increase of $19,422 on the year 1916. The percentage of net profits to paid-up capital is 14.13, against 13.65 per cent. for the previous year. A balance of $45,021 was carried forward at credit of profit and loss account.

United States railroads are more actively in the market for standard section rails, says New York reports, but mainly for small lots for early shipment, as there is small possibility of securing early shipments on contracts carried over from last year by the mills. The United States Steel Corporation has taken some business at $55 to $57 per ton, and one lot of 2,500 tons is reported to have been sold to Canada at a considerably higher price.

Why Burden Your Wife?

IF you wish to appoint your wife as executrix or trustee under your will, why not assist her to carry the heavy burden by appointing this Corporation as co-executor?

Your estate will thus have the advantage of the personal direction which she can give, and she will be relieved of the burdensome details necessarily involved in the management of any estate. Also she will receive invaluable assistance in regard to investments.

Our officers will be glad to confer with you in regard to the making of your will or any trust business you may have in mind.

TO DEVELOP WATER POWER

Hon. Walter Mitchell, referring to the coal situation in his budget speech in the provincial legislature of Quebec, said that the desirability of the extension of trade in all directions during the period of post-bellum reconstruction should ever be in mind.

"It must be remembered," he continued, "that manufactured goods heretofore made in European countries have been recently manufactured in the republic to the south of us, which has been able to furnish the goods to us, notwithstanding tariff conditions, but that as soon as peace is declared the manufacturers of the United States in order to compete with European manufacturers, will be compelled to establish themselves in Canada or once more lose the Canadian market, and it seems to be very important that everything that should be done to get our fair share of such business, where the harnessing of the great water-powers by men of enterprise, the building of storage dams for the increasing of energy produced by such water-powers, under the able guidance of the minister of lands and forests, is lessening our dependence upon the coal fields by development of our own 'white coal.'

"Increasing difficulties of securing adequate supply of fuel should prompt Canadian enterprise and industry to advertise the advantage of establishing manufactures and industries here where our conditions are so favorable."

VULCAN FIRE INSURANCE COMPANY IN CANADA

In addition to operating in a number of the Pacific coast states, the Vulcan Fire Insurance Company, of Oakland, California, is writing some preferred risks through its eastern general agency, Messrs. Henry W. Brown and Sons, of Philadelphia and New York. The Vulcan, under its Dominion license, is applying for registration in the provinces of Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. The company has, however, been operating in British Columbia or some years under a provincial license. As the company operates as a tariff office in the United States, it will also become a member of the Canadian Fire Underwriters' Association in Canada.

Mr. T. W. Greer, Canadian manager of the Century Insurance Company, Limited, of Edinburgh, Scotland, and also managing director of the Pacific Coast Fire Insurance Company, of Vancouver, B.C., has been appointed manager for Canada of the Vulcan Fire Insurance Company, with Canadian head office in Vancouver, B.C. Mr. Greer began his insurance career twenty-two years ago as a local agent in Lindsay, Ont., afterwards removing to Toronto, where he travelled as inspector for Ontario for a Toronto company until 1908, when he was appointed inspector for the Pacific Coast Fire Insurance Company for Eastern Canada, with headquarters at Toronto. After filling that position for about eighteen months, the Pacific Coast Fire decided to open a branch in Toronto to take care of its eastern business, and Mr. Greer was appointed manager of their Toronto office at that time. In the early part of 1911, owing to some changes in the personnel of the head office officials, the position of general manager of that company was offered to him, which he accepted, and took up his residence in Vancouver. Under his management the Century Insurance Company, Limited, of Edinburgh, Scotland, entered the Canadian field in 1914, and that company has built up a large and profitable business.

The Vulcan Fire Insurance Company, of Oakland, California, with head office at San Francisco, was incorporated in 1910. The company began writing business under the presidency and management of Mr. Thomas C. Grant, who had been for thirty-three years Pacific Coast manager of the North British and Mercantile. Mr. Grant resigned the presidency in 1915, and was succeeded by Mr. J. F. Carlston, president Central National Bank of Oakland, Cal.

Mr. H. B. Keith, who for many years was assistant to Mr. Thomas C. Grant, was appointed manager of the company. Mr. Keith's long underwriting experience, coupled with his genial manner, thoroughly fits him for the responsible position of manager of this well-known Pacific Coast company.

The secretary of the Vulcan Fire, Mr. A. Hodgkinson, has had many years' fire insurance experience in the United States. Prior to accepting the secretaryship of the Vulcan Fire he held a very important position with the Firemen's Fund, of San Francisco, and is very well and favorably known among the insurance fraternity on the Pacific Coast.

MIDLAND LOAN AND SAVINGS COMPANY

The annual report of the Midland Loan and Savings Company shows earnings of $41,298. This, together with $18,974 brought forward, has been disposed of as follows: Dividend paid July 3rd, 1917, 4 per cent., $14,400; dividend payable January 2nd, 1918, $14,400; and added to reserve fund, $10,000, leaving a balance to be carried forward of $21,473.

The liabilities to the public are made up of deposits, $371,241, and debentures, $526,673. The liabilities to the shareholders are: Stock, $360,000; reserve fund, $265,000; dividends, $14,487; and profit and loss account balance, $21,473. Mr. William Henwood is president. The vacancy of manager, caused by the death of Mr. J. H. Helm, is not filled yet. The head office is in Port Hope. The company shows every sign of continuing its progressive career.

NATIONAL REVENUES.

According to present indications the government's financial year will close at the end of March with a surplus of about $60,000,000 of revenue over all domestic expenditures, apart from the war. This sum will represent the amount of war costs Canada is paying out of revenue, leaving approximately $450,000,000 of the year's war exepnditure to be added to the public debt.

Customs revenues are decreasing a little in consequence of war conditions of transportation, scarcity of supplies and more general realization by the public of the necessity of thrift. Allowing for a gradual decline in customs revenue from now until the end of the fiscal year, it is estimated the total revenue for the twelve months will be about $260,000,000.

CANADA'S LARGE TRADE

For the nine months of the fiscal year ended December 31st, 1917, the total trade of the Dominion aggregated $2,068,400,971, compared with $1,700,337,790 for the same period in 1916. For December alone, it was to the value of $213,305,644, as against $201,193,194 for December, 1916. Exports from the Dominion for the nine months' period included domestic products to the value of $1,257,684,900. Domestic exports for the same period last year were to the value of $861,629,813. These figures are exclusive of coin and bullion.

Manufactured goods headed the list in point of value, products of this class worth $522,963,430 being exported during the nine months period. In 1916, during a like period, manufactured goods were sent abroad to the value of $317,841,414. Agricultural products were in second place with a value of $475,338,003, as compared with $317,451,444 in 1916. Goods were entered for consumption to the value of $772,630,263, on which duties amounting to $125,796,830 were collected. For the like period in 1916 importations aggregated $625,635,897, on which duties amounting to $106,378,729 were collected.

ROYAL LOAN AND SAVINGS COMPANY

The annual meeting of the Royal Loan and Savings Company, of Brantford, Ont., will be held on February 13th, at which a good financial statement will be presented. The net profits of the company, after payment of all interest on deposits and debentures and providing for all expenses of management and war taxes, amount to $76,994. This sum has been disposed of as follows: Four quarterly dividends at 8 per cent. per annum, $48,000; contributions to Patriotic and Red Cross funds, $3,250; added to reserve fund, $15,000; and written off office building, $5,000. This leaves to be carried forward to 1918 the sum of $5,744 The result of the operations of the business for the year are very gratifying to the directors.

The company is one of the oldest in the province, having been incorporated forty-two years ago. The authorized capital is $1,000,000, of which paid-up capital represents $600,000. The deposits and debentures total $1,539,987, and the reserve fund $405,000. Total assets amount to $2,562,732. The directors are Messrs. Christopher Cook, president; C. B. Heyd, vice-president; Franklin Grobb, A. K. Bunnell, F.C.A., George Wedlake, and A. J. Wilkes, K.C. The company's manager is Mr. W. G. Helliker.

She's Daddy's Girl-

The very sunshine of his life. He's planning great things for her---if he lives.

And if he dies---well, he's proud of the fact that she will then receive---regularly---each month---as long as she lives---a cheque from The Imperial Life to provide for her every need.

You can provide in this way for *your* little girl. Our free booklet tells all about it. Write for a copy. Address—

Saskatoon, Sask.—Fire Chief Heath reports the following for December, 1917, to *The Monetary Times*:—Number of alarms received, 20. Total loss, $20,709.

BRITISH COLUMBIA ELECTRIC RAILWAY

The Jitney Car Competition

Favourable Result of Government Inquiry

The twenty-first ordinary general meeting of the members of the British Columbia Electric Railway Company, Limited, was held on Friday, January 4th, 1918, at the Liverpool Street Hotel, London, E.C., England, Mr. G. P. Norton presiding in the unavoidable absence of Mr. R. M. Horne-Payne, the Chairman of the company.

The Secretary (Mr. Michael Urwin, A.C.A.) having read the notice convening the meeting and the report of the auditors,

Mr. Harold G. Brown read the following speech which had been prepared by Mr. R. M. Horne-Payne:—

Ladies and Gentlemen,—I do not think that there is anything in the annual report and accounts which requires special explanation. It is with very great regret that your directors have decided not to pay the interim dividend on the Five per Cent. Cumulative Preference stock, hitherto paid in January of each year and to postpone the consideration of the dividend on this stock until the end of the financial year. This decision has been made in view of the uncertainty as to the amount of the company's earnings in the immediate future and to the fact that we cannot prudently continue to pay the larger portion of this dividend out of the reserve fund. The results of the year under review—namely, the year ended 30th June, 1917—have only enabled us to pay the full dividend on the Five per Cent. Cumulative Preference stock by resorting to the reserve fund to the extent of £44,000. In the preceding year we had to take £70,000 from the reserve fund in order to make the same payment. Since the annual report was issued we have received by cable the statement of income and expenditure for the month of November, showing an increase in gross earnings of $52,862 and in net income of $31,772. Thus the gross earnings for the first five months of the current financial year show an increase of just under $200,000 over the earnings for the same period of the preceding year, but unfortunately the increase in the net income for the five months only amounts to $29,000, or, say, £6,000.

MARKED IMPROVEMENT IN TRADE

We can, however, take some encouragement from these figures, as the increase in gross earnings is due to a very marked improvement in trade and business conditions in British Columbia, which has every indication of being of a permanent character. If, therefore, as a result of the report of the recent Commission of Enquiry, jitney competition is abolished and other conditions are fairly adjusted, there is a sound basis on which to build hopes that less difficult times are in store for us. I shall say very little to-day on the subject of the policy and prospects of the company. They are dependent on the result of negotiations now being carried on with the object of bringing about a fair and satisfactory rearrangement of working conditions based on the Commissioner's report, and I am debarred from discussing them by the fear of saying anything which might possibly lead to misunderstanding or friction in British Columbia and prejudice these negotiations. I will confine myself to recalling to your minds what has taken place during the past twelve months. From the beginning of the war until the end of 1916 the company's earnings fell away heavily owing to decreased population and stagnation of trade and to the competition of what is known as the jitney car, and at the same time the cost of labor and supplies increased enormously until our net earnings barely covered Debenture interest. In September, 1916, the company had voluntarily granted an increase in wages costing $110,000 per annum to enable the men to meet the increased cost of living. In June, 1917, the men presented a demand for a further increase, amounting to about $250,000, on the ground of still further greatly increased living expense, and on this being refused, struck work. After a few days' suspension of the cars the Government of British Columbia and the Council of the City of Vancouver approached our general manager with a view to bringing about a resumption of the services, and it was agreed that a Commission of Enquiry should be appointed by the Government to examine and report on the transportation problem in Vancouver City and surrounding districts, especially with reference to the jitney car competition. Subsequently, it was mutually agreed that the inquiry should include a thorough investigation of the whole scope and every department of the company's business. The company and the city undertook to abide by the recommendations of this Commission. In the meantime the company agreed to reinstate its services and temporarily to grant the men's demand for increased wages.

DIRECTORS' CONTENTIONS SUSTAINED.

On the 11th of July the Lieutenant-Governor, in Council, appointed Professor Adam Shortt, of Ottawa, a Commission with wide powers, and during the months of July and August Professor Shortt held a very searching public inquiry in Vancouver and Victoria. His report has just reached us, and the findings and recommendations are now in your hands. You will note with satisfaction that your company and management have come through the ordeal entirely creditably, and that the Commissioner sustains the contentions of your directors with regard to jitney competition and on other important points. Professor Shortt finds that it is not possible for both an efficient tramway service and a jitney service to continue, and also, inter alia, that our charges for electric light are high while our charges for the transportation services we give are low, and he proposes a readjustment of these charges and services and the elimination of jitneys where they come into competition with our lines. We have now had the position of the company and its relations with and duties towards the people of British Columbia subjected to an exhaustive investigation, reviewed and adjudged by an impartial tribunal, and we have hastened to express our willingness to act on its decisions and recommendations in a loyal spirit We look to the Government and to the various municipal authorities concerned to meet us in the same spirit, and we hope that as a result it may be found that all misunderstandings have been removed. After the Canadian Pacific Railway we have been in the past by far the most potent influence in developing the wealth and prosperity of British Columbia. The prosperity of Vancouver and Victoria is bound up with our prosperity and ours with theirs. We ask British Columbians, on their side, to interpret and carry out the recommendations of the Commission and to join us in working out the situation in a broad and fair spirit, and thus to put it in our power, when Kaiserism has paid the penalty of its savage brutalities, to combine our efforts and energies effectively with theirs to restore and develop the prosperity of British Columbia.

The Chairman: I will now move the following resolution: "That the balance sheet as at 30th June, 1917, and the revenue account for the year ended on that date, together with the reports of the directors and auditors thereon, be and are hereby received and adopted."

Mr. Harold G. Brown seconded the resolution, which, after the Chairman had replied to one or two questions, was carried unanimously.

The Chairman then moved: "That the payment, since the date of the last annual general meeting, of the dividends at the rate of 5 per cent. per annum on the Cumulative Perpetual Preference stock, and the transfer of £44,000 from the reserve fund to the revenue account, be and are hereby approved."

Mr. T. Blundell Brown seconded the resolution, which was unanimously agreed to.

Mr. E. Maes Harvey next moved the following resolution: "That the directors be authorized, if they think the circumstances justify their doing so, to pay the dividend for the year to 30th June, 1918, on the Five per Cent. Cumulative Perpetual Preference stock, and if necessary to draw upon the reserve fund for that purpose."

Mr. J. Davidson seconded the motion, which was carried unanimously.

The Chairman proposed the re-election of the retiring directors, Mr. R. M. Horne-Payne and Mr. E. M. Harvey, and the motion was seconded by Mr. J. Davidson and unanimously agreed to.

Mr. Harold G. Brown moved: "That the best thanks of the meeting be given to the general manager, officers and staff in British Columbia for their untiring and loyal efforts in the performance of their duties."

Mr. T. Blundell Brown seconded the motion, which was unanimously adopted.

On the motion of Mr. MacLeod, seconded by Mr. Spooner, Messrs. Norton Slade and Co. were reappointed auditors of the company for the ensuing year, and Messrs. Helliwell Maclachlan and Co. were also reappointed the company's auditors in British Columbia.

The proceedings then terminated.

The Imperial Guarantee & Accident Insurance Company of Canada

Directors' Thirteenth Annual Report for the Twelve Months Ending Thirty-first December, Nineteen Hundred and Seventeen

The Directors have much pleasure in submitting to the Shareholders their Thirteenth Annual Report for the twelve months ending 31st December, 1917.

BUSINESS: The Company issued 18,096 policies for insurance of $35,165,701.00. The premiums thereon amounted to $310,657.37, being an increase of $42,887.18. The interest earnings amounted to $19,539.75, being an increase of $1,053.15.

ASSETS: The Assets of the Company now amount to $478,031.83, and the investments of the Company are all first-class securities bearing good interest returns.

SURPLUS: The Contingent Reserve Fund now amounts to $25,000.00, and the surplus to policyholders is $312,560.07, which, together with the uncalled subscribed Capital of $800,000.00, makes the available security for all contracts $1,112,560.07.

The lines of Insurance now written are: Personal Accident Insurance, Sickness Insurance, Elevator Insurance, Fidelity Guarantee, Plate Glass Insurance, and Automobile Insurance (including insurance of Automobiles against Fire).

The Certificate of the Auditors is appended to the Financial Statement as to the audit of the Company's affairs.

HERBERT C. COX,
President.

Toronto, 11th January, 1918.

Statement for Year Ending December 31st, 1917.

We have examined the securities and verified the Cash and Bank Balances and we certify that the above Balance Sheet shows the true position of the Company at that date.

CLARKSON, GORDON & DILWORTH,
Chartered Accountants.

Toronto, 11th January, 1918.

TO START STEEL PLANTS BONUSES ARE NEEDED

It is stated at the Marine Department, Ottawa, that the government has received tentative offers from large American companies desiring to engage in the manufacture of steel for Canadian ships. These companies, however, required encouragement in the way of bonuses and concessions before taking up the manufacture of steel products on a large scale in Canada. The government, it is understood, has not yet decided to bonus corporations desiring to engage in the work. Companies may, it is stated, submit a proposition and prices to the government which will consider them and accept or reject them as it sees fit.

Mr. Henry J. Fuller, vice-president of Fairbanks-Morse and Company, and president of the Canadian Fairbanks-Morse Company, Limited, has been elected a director of the Liberty National Bank of New York City.

An order for the winding up of the Arrow Lakes Lumber Company was made by Chief Justice Hunter at Vancouver on Tuesday, on the application of Mr. J. L. G. Abbott, appearing for the Lafayette-Lamb Lumber Company, which holds a judgment for $2,294.000 against the Arrow Lakes Company, according to a Vancouver dispatch.

The impossibility of getting power at less than $46 per horse-power may lead to the British-America Nickel Company, of Sudbury, abandoning plans to erect a large nickel refinery in that district. For some time past the company had been discussing the question of power with the Ontario Hydro-Electric Commission, and it was hoped that power might be developed on the French River for about $25 per horse-power. The advance in the cost of material and labor, and in borrowing rates, has brought estimates for the proposed power plant up to a point that means $46 power. The company, it is stated. is looking to Ottawa as a possible site for its refinery.

DIVIDENDS AND NOTICES

BANK OF MONTREAL

Notice is hereby given that a **Dividend of Two-and-one-Half per Cent.**, upon the paid-up Capital Stock of this Institution has been declared for the current quarter, payable on and after Friday, the **First Day of March** next, to Shareholders of record of 31st January, 1918.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

THE STORY OF A YOUNG FINANCIAL MAN'S SUCCESS.—A financial man, thirty-three years of age, came to our office four years ago to take up a new line of business—a line against which he had been prejudiced, but which he knew carried great rewards for the successful. His average commissions this year will be over $5,000.00, and he has built up a future income of over $3,000.00 a year on business already written. We are enlarging our organization to prepare for an enormous expansion of business during the next few years. We have positions for two good men with successful records. This offer will be open during the next week. Only applicants of unquestioned integrity and with the highest references will be considered. W. A. Peace, Manager Toronto Branch, Imperial Life Assurance Company, 20 Victoria Street, Toronto.

PUBLIC ACCOUNTANT is desirous of relinquishing practice on own account and joining the staff of a good live concern; chartered secretary of joint-stock companies, capable, experienced manager and systematizer, married, not eligible for military service; can arrange to transfer practice instanta if necessary. Box 139, *The Monetary Times*, Toronto.

MOOSE JAW RENTAL AGENTS.—The Ralph Manley Agency, Limited, Walter Scott Block, Moose Jaw, handle the renting of Moose Jaw Improved City Property. Their facilities permit them to rent and re-rent property as well as looking after collections and any necessary repairs. Established 1908. Correspondence solicited.

CHIEF CLERK.—Wanted by a British Fire Insurance Office a competent young gentleman for the position of Chief Clerk. Must be capable of taking charge of office. Apply giving full particulars as to experience, length of service and salary expected. P.O. Box 1386, Montreal.

Accountant or Bookkeeper Seeks Position

Expert Accountant and Bookkeeper desires position in Toronto. First class references. Has served 22 months in Canadian Field Artillery and has been honourably discharged from army.

Box 141—Monetary Times.

BRITISH COLUMBIA ELECTRIC RAILWAY

The British Columbia Electric Railway has had its full share of trouble during the past few years, caused largely by a lack of appreciation of the excellent service rendered by the company, in the territory it serves, by the unchecked and unfair jitney competition, by war conditions, and by a popular disrespect of the rights of the capital invested in the enterprise. There are signs, however, that at least some of these obstacles will be removed and that this progressive public utility will be afforded better treatment by the civic and provincial government authorities. With such drawbacks as noted, the company was not able last year to make as good a financial record as is desirable. However, it was possible, by dint of good management, to earn net profits, after making the usual provision for maintenance, amounting to $804,000, as compared with $675,000 for the previous twelve months, and $903,500 for 1914-15. In order to provide the full dividend on the 6 per cent. cumulative preference shares, the directors have to withdraw only $220,000 from the reserve fund, from which $350,000 had to be taken for a similar purpose a year ago. In the first four months of the current year gross earnings show an expansion of $146,800, but the gain unfortunately has been absorbed by increased expenses owing to the higher cost of labor and materials, and net profits therefore show a decline of $2,600.

The outlook for the immediate future is so uncertain that the directors have decided to postpone the payment of the interim preference dividend due on January 15th, but they are seeking authority to pay in July next the full amount due, if necessary, with the help of the reserve fund. By that time, as a result of the recommendations of the commission recently appointed by the lieutenant-governor of British Columbia to investigate the transportation question in Vancouver and district, it is hoped the position will have improved enough for a recovery in earnings and profits.

Montreal and Toronto Stock Transactions

Stock Prices for Week ended Jan. 23rd, 1918, and Sales.

L. COFFEE & CO.
GRAIN MERCHANTS.

THOMAS FLYNN Established 1845 **Board of Trade Building, Toronto, Ontario**

New Records

Results secured during the past year re-affirm the position of the Sun Life of Canada as the leading life assurance organization of the Dominion.

It leads all Canadian Companies in annual New Business, Total Business in Force, Assets, Surplus Earnings, Net Surplus, Premium Income, Total Income and Payments to Policyholders.

Fair-dealing and progressive business methods are the foundations for the Company's phenomenal growth.

The valuation of stock exchange securities by the Bankers' Magazine of London shows a decline of £158,000,000 during 1917 in their list of 387 representative securities, as compared with £149,000,000 in 1916.

The annual financial statement of the Crown Reserve Company to the shareholders this week showed an increase in ore production from $191,822 to $265,155. After paying mining and all other expenses, including development, depreciation, etc., amounting to $182,582, the profits were $82,573 against $2,073 in 1916 With balance of $770,533 carried forward from 1916, the profit and loss account shows a total of $930,079, and after paying head office superintendence, taxes, depreciation, prospecting and exploration, totalling $148,314, the surplus was $781,765, the surplus for 1916 being $770,533.

NEW INCORPORATIONS

British Controlled Oilfields, Limited, of Montreal, Has Large Authorized Capital

The largest companies incorporated during the past week were: Waneta Power Company, Limited, Nelson, B.C., $1,500,000; Metals Chemical, Limited, Welland, Ontario, $1,000,000; the Wood Molybdenite Company, Limited, Ottawa, Ontario, $1,000,000; Pinto Collieries, Limited, Winnipeg, Man., $1,000,000; British Controlled Oilfields, Limited, Montreal, Que., $12,500,000; Engineering and Machine Works of Canada, Limited, St. Catharines, Ontario, $1,000.000.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are provisional directors:—

Prince Rupert, B.C.—Skeena Club, Limited, $10,000.

Nelson, B.C.—Waneta Power Company, Limited, $1,500,000.

Winnipeg, Man.—Pinto Collieries, Limited, $1,000,000; H. Hurtubise, F. Hurtubise, T. F. Trihey.

Welland, Ont.—Metals Chemical, Limited, $1,000,000; A. W. Holmested, W. J. Cluff, W. Skelly.

Windsor, Ont.—Universal Car Agency, Limited, $40,000; J. M. Duck, W. D. McGregor, J. F. Duncan.

Ottawa, Ont.—The Wood Molybdenite Company, Limited, $1,000,000; O. E. Wood, A. McLean, G. D. Kelly.

Three Rivers, Que.—La Compagnie J. H. Giroux, Limitée, $49,500, J. H. Giroux, A. Allaire, C. H. Giroux.

Niagara Falls, Ont.—Auto Road Construction Company, Limited, $600,000; W. H. Johnston, A. H. Rose, R. Miller.

Village of Beeton, Ont.—Kline Fanning Mill Company, Limited, $40,000; E. R. Munnings, L. Munnings, F. J. Hubert.

St. Catharines, Ont.—Engineering and Machine Works of Canada, Limited, $1,000 000; H. R. Fraser, F. S. Rugg, Charles Mignault.

Village of Dutton, Ont.—The Dunwich and Dutton Telephone Company, Limited, $6,000; W. H. McAlister, J. R. Cameron, D. March.

Hebertville Station, Que.—Compagnie D'Aqueduc Hebertville-Saint-Bruno, $49,000; H. Lippe, J. A. Roy, L. Bernier. Louis Beaubien, Limitée, $149,000; L. Beaubien, J. I. Beaubien, E. Moisan.

Quebec, Que.—Louis Beaubien, Limitée, $149,000; J. I. Beaubien, E. Moisan, G. Jalbert. Legare Automobile and Supply Company, Limited, $500,000; L. L. Legare, J. A. Frader, P. C. Falardeau.

Montreal, Que.—The Page Wire Fence Company of Canada, Limited, $250,000; A. R. Plimsoll, R. Brodeur, A. Chouinard. British Controlled Oilfields, Limited, $12,500,000, G. W. MacDougall, L. Macfarlane, W. B. Scott. Laboratoire Nadeau, Limitée, $30,000, T. St. Arnaud, H. Nadeau, P. O. Nadeau.

Vancouver, B.C.—United Mail-Order Stores, Limited, $10,000. Maquinna Packing Company, Limited, $500,000. Banfield, Gunther and Black, Limited, $10,000. McAllister Spring Company, Limited, $25,000. Empire Brewing Company, Limited, $10,000. D. E. Brown's Travel Bureau, Limited, $25,000. McTavish Fisheries, Limited, $25,000. D. A. Macdonald, Limited, $10,000. Allan and McKelvie Engineering Company, Limited, $50,000. National Supplies, Limited, $15,000. Colonial Shipping Company, Limited, $40,000. G. L. Logging Company, Limited, $10,000. Blue Lake Consolidated Company, Limited (non personal liability), $1,000,000.

Toronto, Ont.—Green's Economizer, Limited, $50,000; W. Gilchrist, A. Hand, J. Stewart. C. J. Bodley, Limited, $50,000; W. J. Bodley, W. E. Steel, H. F. Hall. Majestic Electric Supplies, Limited, $150.000; J. H. Greenberg, M. O'Brien, E. L. Dewey. College Street Cartage and Storage Company, Limited, $40,000; W. Gilchrist, J. Stewart, W. Lawr. Golden Gate Mining Company, Limited (no personal liability), $40,000; L. J. Pashler, E. Barry, L. Sleeth. Comfor Manufacturing Company, Limited, $40,000; J. W. McFadden, C. B. Nasmith, F. E. Earl. Molybdenum Alloys, Limited (no personal liability), $500,000; G. I. Quibell, F. Rathbun, W. R. Allely. The Muir Cap Company, Limited, $40,000; G. C. Loveys, G. E. Atwood, W. M. Smith. The Perfection Children's Cloak Company, Limited, $40,000; M. Frankfort, S. Rogers, A. G. Keith.

DOMINION BANK

Showing total assets of $109,436,000 and many other strong features, the Dominion Bank's statement for the past year is a very satisfactory document. An increase of $17,000,000 in assets during the year is due largely to gains in deposits and not circulation. In 1917 the profits for the first time exceeded $1,000,000, the actual net earnings for the year being $1,087,477, as against $969,065 in 1916. This is an increase of $111,559. The results for the past year were equal to 7.73 per cent. on the total of the shareholders' invested funds, as comprised in the capital and reserve, the ratio in 1916 being 6.87. The ratio of earnings to capital was 18.12 per cent. in 1917, and 16.15 per cent. in 1916. An analysis of the bank's balance sheet and statement reveals a very substantial position.

MERCHANTS FIRE INSURANCE COMPANY

A very satisfactory report was presented by the directors of the Merchants Fire Insurance Company at their recent annual meeting in Toronto. Not only was the premium income materially increased but after providing for all provincial and Federal taxes, the net earnings were the largest in the company's history. The net profit on the year's operations was $80,498. A dividend of 10 per cent. on the paid-in capital stock of the company was declared and the balance carried to the credit of profit and loss account. The expense ratio for 1917 was 33.93 per cent., as compared with 33.97 per cent. in the previous year. The fire loss ratio was 39.01 per cent., and the profit, 27.04 per cent. of the net premium income.

The amount at risk is substantial and now stands at $49,670,297. The number of policies in force is 44,186, an increase of 2,920. The average risk per policy is $1,124.10. The premium income, interest, receipts, building rentals, commission on re-insurance and endorsement fees were respectively $316,110, $15,306, $4,045, $965 and $295, making a total income of $336,623.

In presenting the directors' report, Mr. Ralph E. Gibson, president, pointed out that the fund deposited with the Ontario insurance department for the security of policyholders is $106,500. In addition to being greatly in excess of statutory requirements, this is the largest made by any Canadian fire insurance company. The general manager of the company is Mr. J. H. C. Durham, and Mr. Gibson intimated that the sound and healthy condition of the company's affairs was due largely to the efficiency of the management. Mr. Durham is a cautious underwriter and has carefully selected the company's business. The results of this policy are reflected in the financial statement.

DECEMBER BANK STATEMENT

The following statement shows the principal items of the December bank report, with the changes which occurred during the month.—

	Dec., 1917.	Changes during Dec., 1917.
Reserve fund	$ 114,100,693	+ $ 53,940

Total liabilities	2,081,733,392	+ 3,632,162
Total assets	2,323,163,781	+ 2,892,796

The statement in detail and the usual analysis will be printed in these columns next week.

As a first step toward building up in the waste lands of the province a great sheep and cattle ranching industry the Ontario government is to establish a five-thousand-acre ranch, probably in the Parry Sound district. The plans which are now receiving the consideration of the experts of the department of agriculture will be put into operation during the coming summer, when the ranch will be located, buildings erected, etc., and arrangements made for putting stock on the land the following spring.

In his remarks to shareholders on the annual report of the Twin City Railway Company, President Horace Lowry stated that the company had suffered to a large extent from increases in taxes, materials, wages, fuel and other supplies, but that the physical condition of the property had been maintained. New trackage was constructed and put in operation aggregating 6.87 miles, and 36 new passenger cars were put in service. Mr. Lowry also stated that the city of Minneapolis completed the valuation of the company's property lying within that city, but on account of generally disturbed conditions, the city authorities were moving slowly with the franchise negotiations. Ample steps had been taken to protect the interests of the company in the negotiations.

GUARANTEE COMPANY OF NORTH AMERICA

Founded by Mr. Edward Rawlings in 1872, the pioneer of the business on this continent, the Guarantee Company of North America has achieved splendid success in its underwriting operations. It has an enviable reputation in the insurance world. Not only is it favorably known because of its sound business principles and practice; its staunch position and a policy combining proper caution and enterprise, have placed it in the front rank of our financial and underwriting institutions. The excellent examples set by the company's founder have been carried on year by year by succeeding managements. To-day at the head of the corporation as president and managing director is Mr. Henry E. Rawlings, whose success in his important sphere has been notable. Mr. Rawlings has carried on the affairs of the Guarantee Company of North America in a creditable way. He is supported by an exceptionally influential and active directorate. In presenting the directors' report, at the annual meeting this week, Mr. Rawlings pointed out that last year, as in previous years, the company had adhered to its conservative policy and methods in the underwriting of only fidelity bonds and a few classes of preferred surety bonds.

The premiums revenue last year was the largest in the company's history. The ratio of claims, paid and pending, was decreased, compared with the average of previous years.

The United States Guarantee Company of New York, of which the company owns two-thirds of the capital stock, and with which its reinsurance arrangements have been mutually satisfactory and profitable, after adjusting its valuations of securities on a basis consistent with present values providing for all liabilities and payment of a dividend of 10 per cent. on its capital stock of $250,000, shows an increase of $24,303.79 in its surplus to shareholders, which at the close of the year totals $675,288.82. In the latter part of the year, the company was subjected to the usual periodical three-year examination of the superintendent of the insurance department of the State of New York, whose report, in accordance with his findings, concludes: "The company's policy is careful underwriting, fair treatment of policyholders and prompt payment of adjusted claims."

An examination of the company's statement shows a maintenance of a strong and favorable financial position. The company's management, directorate, shareholders and clients have every good reason to be well satisfied.

WORLD'S CROP DATA

A cablegram received from the International Institute of Agriculture gives the following crop data:—

Production of wheat in Uruguay, 18,732,000 bushels, or 340.8 per cent. of the 1916-17 crop, an increase of 12,980,000 and 273.6 per cent. of the five years' average 1911-12 to 1915-16, an increase of 11,660,000; in Union of South Africa, 8,833,000, and 135.5 per cent. of the five years' average, an increase of 2,320,000; in New Zealand, 8,000,000 bushels, 160 per cent. of last year, an increase of 3,000,000, and 125 per cent. of the five years' average, an increase of 1,600,000. Argentina and Australia have not yet reported.

Production of oats in New Zealand, 21,138,000 bushels, 337 per cent. of last year, an increase of 14,870,000, and 137 per cent. of the five years' average, an increase of 5,710,000.

In England and Wales the area sown to wheat shows an increase of 15 per cent., and rye 3 per cent. The area sown to barley and oats is practically the same as last year.

The total production of cotton in the United States, India and Egypt is 15,355,000 bales of 500 pounds, or 94.5 per cent. of last year, and 81.7 per cent. of the five years' average. The United States crop this year is 10,949,000 bales.

At the annual meeting of shareholders of the Provincial Bank of Canada on Wednesday, it was decided to change the fiscal year, which will in future terminate on June 30, instead of December 31. The annual general meeting will hereafter be held on the second Wednesday of September. The board of directors was re-elected, and at a subsequent meeting of the directors the following officers were elected. Hon. H. Laporte, president; W. F. Carsley and T. Bienvenu, vice-presidents, and at a meeting of the Commissioners' censors held immediately after the directors' meeting, Sir Alex. Lacoste was elected president, and Dr. E. F. Lachapelle, vice-president for the ensuing year.

Call loans in Canada	82,569,983	72,178,345	71,779,020	—13.4	—1.3
Call loans elsewhere	173,878,134	139,832,552	134,483,482	—22.5	—3.6
Circulation	148,785,237	202,181,328	208,753,337	+ 4.1	+2.9

THE above are the changes in the principal accounts of the Canadian banks during December, the figures being compared also with those of a year ago. The changes during the month were comparatively slight, one of the most notable being an increase of $31,000,000 or 5 per cent. in demand deposits. Savings deposits, for the first time in several years, show a decrease. The loss, however, is less than 2 per cent. and this account is still more than 17 per cent. higher than a year ago. The decrease in December was partly due to the payment of the 10 per cent. instalment in connection with applications for Victory bonds. Call loans abroad were decreased during the month by about $5,000,000. Circulation increased by $6,000,000 or nearly 3 per cent. Current loans abroad were $16,000,000 greater in December than in the previous month, the gain for the month being 4.4 per cent.

The following table gives a record of deposits for the past fourteen months:—

	Deposits payable on demand.	Deposits payable after notice.
1916—November	$459,277,454	$836,593,269
December	458,208,417	845,006,717
1917—January	427,308,526	864,163,344
February	430,331,801	880,456,637
March	448,151,528	888,765,698
April	471,312,285	874,948,724
May	443,839,847	892,562,657
June	449,689,670	900,510,552
July	450,849,356	929,442,340
August	443,317,275	806,774,687
September	451,749,532	965,393,541
October	495,058,449	985,790,850
November	538,869,362	1,008,657,874
December	569,441,871	995,978,013

Demand deposits in December were higher, at $569,000,000, than at any time during the past fourteen months. Probably the preparations made by trust and insurance companies and other large subscribers to pay their instalments in full on January 2nd were largely responsible for the increase of $57,000,000 shown in the demand deposits in December. During that month they undoubtedly accumulated funds in their current accounts ready for the heavy cheques to be issued at the beginning of January. The January return will reflect the disposition of these special balances, or rather their transfer to the government's account. January is nominally a month of contraction; consequently a decrease in the demand deposits may be in evidence this month.

The deposits payable after notice declined about $13,000,000 during December but still were $150,000,000 greater than a year ago. A further decrease in savings deposits will probably be noted in the January bank statement. This will be partly counterbalanced by the customary January movement of current account funds into the more permanent forms of savings accounts and special time deposits.

Commenting on the deposits accounts, the financial editor of the Montreal Gazette says: "Although the initial payment of 10 per cent. on the Victory Loan called for the transfer of about $41,000,000 from private to government account, the Canadian bank statement of December 31st shows a net loss in savings deposits of less than $13,000,000. As savings deposits increased some 22 millions in November, the total at the end of December was nearly 10 millions higher than two months before. On the side of savings account, therefore, the returns as shown in the December statement are highly reassuring. Expansion in savings apparently continued at a substantial rate through the month, materially reducing the decline due to withdrawals for loan payment.

"As no inconsiderable part of the loan payment was probably chequed out of non-interest bearing deposit accounts, the results shown in the item of demand deposits are rather surprising. The figures under this head rose 57 millions in the month, and the grand total of deposits

Of the deposit in Central Gold Reserves $19 680,000 is in gold coin ; the balance is in Dominion Notes.

of the Canadian public rose some 45 millions to a new high record of 1,592 millions. These at least are the figures shown in the summary telegraphed from Ottawa yesterday.

"Preparations for year-end payments are possibly one explanation for the remarkable gain. Normally there is a sharp expansion in this item of banking accounts in the final month of the year as cash balances are increased to provide against payments of all kinds falling due at the beginning of the new year. The increase, however, is unusually large, and particularly so in view of the Victory Loan payment."

The following table shows a record of deposits for the past four years :—

Dec.		On demand.	After notice.	Total.
1913	....	$381,375,509	$624,692,326	$1,006,067,835
1914	....	349,909,953	662,830,037	1,012,739,990
1915	....	423,690,384	720,990,267	1,144,680,651
1916	....	458,208,417	845,006,717	1,303,215,134
1917	....	569,441,871	995,978,013	1,565,419,884

While savings deposits decreased in December, the increase of $31,000,000 in demand deposits maintained a high sum for total deposits which, at the end of 1917, stood at $1,565,419,884. This is the highest December total on record.

The following table shows the course of current and call loans in Canada during the past fourteen months :—

Dominion Government---Dec., 1917

LIABILITIES

Loans from other banks in Canada secured, including bills re-discounted	Deposits made by and balances due to other banks in Canada	Due to banks and banking correspondents in the United Kingdom	Due to banks and banking correspondents elsewhere than in Canada or the U.K.	Bills payable	Acceptances under letters of credit	Liabilities not included under foregoing heads	Balances due to the Imperial Government	Total Liabilities	Aggregate amount of loans to directors, and firms of which they are partners	Average amount of current gold and subsidiary coin held during the month	Average amount of Dominion Notes held during the month	Greatest amount of notes in circulation at any time during the month

T. C. BOVILLE, *Deputy Minister of Finance.*

Loans.	Current in Canada.	Call in Canada.
1916—November	$813,791,947	$89,395,370
December	820,378,557	82,569,983
1917—January	806,479,147	79,737,064
February	813,302,717	78,686,535
March	843,054,466	76,478,708
April	880,523,897	82,737,417
May	844,890,589	78,514,798
June	839,355,782	76,085,220
July	829,560,700	71,376,788
August	836,429,670	71,204,351
September	855,306,953	72,421,187
October	883,986,860	71,653,719
November	868,973,714	72,178,345
December	858,533,298	71,779,020

Current loans in Canada were about $10,000,000 or 1.1 per cent. less in December than in November, but were 4.6 per cent. higher than a year ago. The December figures indicate that a great part of the financing of the crop movement is over. Call loans in Canada were about normal at $71,879,000.

The following table gives a record of the loan accounts during the past four years:—

Dec.	Current loans in Canada.	Current loans elsewhere.	Call loans in Canada.	Call loans elsewhere.
1913 ..	$822,387,975	$ 58,305,388	$72,862,971	$115,984,680
1914 ..	786,034,378	43,413,760	68,511,653	85,012,964
1915 ..	775,517,947	58,479,739	84,228,155	137,157,860
1916 ..	820,378,557	76,396,720	82,569,983	173,878,134
1917 ..	858,533,298	111,581,098	71,779,020	134,483,482

Although current loans in Canada declined $10,000,000 in December they were still at the highest total for that month in recent years. Current loans abroad were increased in December by $16,000,000 and are 46 per cent. greater than a year ago. Call loans abroad are nearly 23 per cent. less than a year ago and declined about $5,000,000 during December. The course of call loans abroad for the period beginning two months before the declaration of war is of interest and is shown in the following table:—

	1914.	1915.	1916.	1917.
January .	....	$ 85,796,641	$134,248,552	$155,747,476
February	....	89,890,982	139,138,651	162,344,556
March ..	....	101,938,685	141,889,989	161,616,735
April ...	....	121,522,971	147,146,443	159,156,054

November	74,459,643	135,530,562	183,250,389	139,832,552
December	85,012,964	137,157,869	173,878,134	134,483,482

ONE BUDGET FOR ENTIRE DOMINION

In addressing the Manitoba legislature last week on the second reading of the bill to borrow $1,000,000 to complete the provincial parliament buildings, Hon. Edward Brown, provincial treasurer, said he considered the federal legislation controlling bond issues was wise and sound. He had urged Sir Thomas White to go still further and make one budget for the whole Dominion, including all provincial governments, for all such items as were deemed to be absolutely necessary, particularly refunding items, so that there might be only one appeal in Canada once a year.

JAPANESE INSURANCE COMPANY IN CANADA

The Tokio Marine Insurance Company, an enterprising Japanese company, which was established in 1879, with head office at Tokio, has been authorized to transact business in British Columbia. Messrs. Dale and Company, with head office in Montreal, are the Japanese company's Dominion agents. Their branch office, in the Pacific Building, will become the provincial agents of the company, and the Vancouver manager of Dale and Company, Mr. B. G. D. Phillips, will be the company's attorney of record.

BRITAIN'S BANKING SYSTEM NEEDS CHANGES

The United States banking system was praised as a model for Great Britain in the annual address of Sir Edward H. Holden, chairman and managing director of the London City and Midland Bank, to the stockholders. He urged that considerable changes in the British banking laws ought to be made as soon as possible in order to cope with the changed conditions brought about by the war.

He explained the new United States banking system in detail, and declared that, from a financial point of view, the entry of the United States into the war "vastly strengthened the entente position." He also detailed the exhaustive measures which Germany has taken to bring her banking resources up to the requirements of war-time and reconstruction.

"The United States," he continued, "has widened her banking system since the war began and Germany has entirely changed hers. Great Britain has tried to get along under the act of 1844. This is not enough. The time has come for the repeal of the old act, and I ask the chancellor of the exchequer to appoint a committee of six bankers for its immediate consideration."

John J. Payzant, president of the Bank of Nova Scotia for the last thirty years, retired at the recent annual meeting. Charles Archibald was elected president, and George S. Campbell and J. Walter Allison, vice-presidents.

AUSTRALIA'S WAR LOANS

When the fifth Australian war loan—designated the Liberty loan—for £20,000,000 closed on November 2, 1917, it was found that the total amount subscribed was £20,281,160, reports Mr. D. H. Ross, Canadian trade commissioner at Melbourne, to the department of trade and commerce, Ottawa, but in addition £544,000 was invested in war savings certificates, during the period in which the loan was offered, thus making a grand total of £20,875,100. The amounts subscribed in the various states were as follows: Victoria, £8,445,930; New South Wales, £8,038,980; Queensland, £1,696,880; South Australia, £1,396,740; Tasmania, £400,580; Western Australia, £302,050; total fifth loan, £20,281,160. The five internal war loans raised in Australia have so far resulted as follows:—

War loan of	
August, 1915	£13,389,440
February, 1916	21,655,680
September, 1916	23,587,420
April, 1917	21,421,070
November, 1917	20,281,160
Total of five war loans	£100,334,770

War savings certificates of a face value of £3,107,963 have also been sold for £2,719,474. It is anticipated that the treasury will receive from now until April 1, 1918, when the last instalment of the Liberty loan is payable, at least a further £2,500,000 from the sale of war certificates, and this additional amount may thus fairly be included in the total contributed to the fifth loan.

Premier Hughes of Australia has announced a new Australian war loan of £40,000,000, according to a cable received last week by the The Vancouver World, from Sydney, N.S.W.

CONFEDERATION LIFE ASSOCIATION

Writing the largest amount of new business ever transacted by the company in one year, namely, $15,637,517, the Confederation Life Association, Toronto, had insurance in force at the end of 1917 aggregating $82,273,701. This company, conservative but properly progressive in its methods, made the greatest gain in insurance in force in its history. This represents, too, excellent business, the great majority of which will stay on the books. The new business obtained last year, inclusive of bonus additions, gave an increase over the previous year of $3,818,000. The addition to the insurance in force at the end of the year amounted to $6,771,000, which was more than double that for 1916.

The total net claims for the past year amounted to $1,077,348, including war claims aggregating $308,960, $25,000 of which was caused by the Halifax explosion. War claims under Canadian policies amounted to $260,000, and under those in other countries, $48,000. The total payments to policyholders and beneficiaries under insurance policies and annuity contracts amounted to $2,504,879, being $387,000 more than in the preceding year, and included payments on account of war claims of $238,885. War claims were a drain on this company as on other life companies during the year, but Mr. Macdonald, the president, reminded the shareholders and policyholders that the company was able to meet such a contingency, with practically no disturbance to its strongly fortified finances.

Both the premium income and the interest income were substantial, the former amounting to $3,152,287 and the latter to $1,090,477. Among other satisfactory features was a marked reduction in the expense ratio.

The balance sheet shows total assets of $22,329,534, and a material increase in bonds and debentures, amounting to nearly $2,000,000. This gain represents principally the company's participation in national financing. The Confederation Life has purchased to date $3,668,750 of Canadian war bonds.

Mr. J. K. Macdonald, the president, outlined the satisfactory features of the report at the company's annual meeting this week. Mr. Macdonald has the assistance of an excellent staff at head office, an energetic field force, and the following businesslike directorate:—Vice-Presidents, Mr. W. D. Matthews, and Sir Edmund B. Osler; Col. Albert E. Gooderham, Lieut.-Col. J. F. Michie, Lieut.-Col. the Hon. Frederic Nicholls, Messrs. Joseph Henderson, James E. Ganong, John Macdonald, Peleg Howland, Thomas J. Clark, and John Firstbrook.

FOOD CONTROL

There has been comparatively little food conservation in Canada. The regulations imposing meatless days in hotels and public eating places have helped, but they are only a beginning of the restrictions we should be undergoing. We have been exhorted by the food controller's office to conserve food, to decrease consumption and eliminate waste. While voluntary efforts have conserved supplies to a small extent, we think the people of Canada are willing and waiting for the proper measure of compulsion in this matter. According to Ottawa despatches, the new food controller, Mr. H. B. Thompson, believes the time has come for further compulsory regulations in the way of rationing. It is said he will follow the educational campaign of his predecessor, Mr. Hanna, with a series of concrete and drastic restrictive regulations to stop food waste and to meet as far as possible the urgent demand of the Allies for food supplies from Canada.

We hope these reports are true. In every place here are seen evidences of food in abundance. Similarly may be seen innumerable opportunities for curtailing consumption and without the slightest hardship to our people. The many-course dinner should be forbidden, no matter what function it proposes to grace. The open sugar bowl might be made the subject of inquiry and later of regulation. The proper distribution, by improved marketing methods, of crops which are plentiful, is another important consideration. If the food controller has a mind to control, and is backed by the war cabinet, much can be accomplished.

There is little prospect of increasing production this year sufficiently to meet, even in any approximate way, the food requests of the Allies to Canada. The only other way of supplying the need is by saving 25 per cent. or more of the normal domestic consumption, thus increasing the exportable surplus by that amount. The United States food controller, Mr. Hoover, will deal in a similar way with food consumption across the border, and regulations in Canada and the United States should be co-ordinated according to mutual requirements and objects.

RAILWAY NATIONALIZATION

Less is heard of the demand for the nationalization of those of our railway systems which have not yet come under government control. Two points have had serious consideration during the past few months. One is the great financial responsibility which the government would assume in nationalizing all the railways of the country. The other is the question of efficiency of operation. Both these matters are important not only in regard to future action but also in respect to the railway systems which the nation has already shouldered. While the railways of the United States are under the control of the government for the time being, they are in the hands of men developed under competitive conditions and in the discipline of private business. They have been obliged to satisfy their superior officials, and at the same time had opportunities to better their condition by going to other companies. The roads, although operated nominally by the government, will be in reality operated by this staff. "But," as the National City Bank of New York has asked, "what kind of a staff will take their places eventually, selected by civil service examination and promoted by seniority? Will the same type of railway officials be evolved under the regime of government ownership, if that should be the permanent system? This is one of the vital questions up to the theory of government ownership."

The railways of Great Britain have been now more than three years under government management, and it is interesting to note that criticism is not entirely stilled.

The London Times, commenting upon congestion at the terminals, says: "The railways are certainly short of labor, but is it established that all the officials are putting their very best efforts into the solution of the present problems? The railways are now government-controlled institutions and competition has diminished where it has not vanished. It seems to be a question whether quite the same amount of thought and work is being put into the efficient management of the companies as in the days before the war when the lines were keenly competing against each other. This question which has been raised of a slackening of effort directly in consequence of the nationalization of the railways is a serious one and evidently deserves inquiry."

When these points are raised, the question is invariably asked, "Cannot we get the same efficiency under government control as under private enterprise?" The reply, judging from past history, is in the negative. The experience during war has shown that, under abnormal conditions, good results have been obtained by the closest co-operation between governments and business men. This principle also will probably be practised to a considerable extent after the war. That a government, however, should run and operate everything in war time, irrespective of vital business and financial considerations, is an unbusinesslike proceeding. The most efficient governments will likely be those who make a strong working partnership with capital, labor, and business enterprise.

CANADIAN FLAX

Attention is called, in a report to the department of trade and commerce, Ottawa, by Mr. Harrison Watson, Canadian trade commissioner in London, to the shortage of flax seed in the United Kingdom. He points out that owing to increasing lack of transportation facilities shipments from both India and the Argentina have greatly decreased, and Russian supplies have also almost disappeared. The extent of the shortage is illustrated by the official figures of imports which show that for the nine months ended September 30th, 1917, receipts were only 813,987 quarters, against 2,086,112 in 1916, and of 1,700,946 in 1915. Under the circumstances the flax seed is badly wanted, and authorities consulted are unanimous that Canada should be recommended and urged to send over all the flax seed available. All mills overseas are now under control of the government.

This matter has been referred to in *The Monetary Times* on several occasions. A Belfast correspondent described in these columns two weeks ago "the tangled skein of doubts and troubles" in which the Irish linen business is involved just now. These include high prices for Irish flax; decreased supply of foreign flax partly because of Russia's deflection from the ranks of the Allies and the British government's restrictions on the supply of Irish flax to spinners. Our Belfast correspondent stated that the situation is accepted philosophically by the half-million of people who are associated with the great linen industry which that little corner of north-east Ireland has for a couple of generations past made the hub of the world's supply. He added: "The silver lining in the black cloud is that linen may soon provide Canada's opportunity to supply not alone a goodly portion of the flax fibre for next autumn's linen manufacture, but also to provide much of the seed. If this should prove to be so, Canada and Ireland will have forged a bond of commerce and intimacy which is certain to be indissoluble."

SIGNIFICANCE OF VICTORY LOAN

Some striking figures were given by Mr. W. T. Rundle, vice-president and general manager of the National Trust Company at the company's annual meeting on Wednesday, when he emphasized the significance of the Victory Loan achievement. He pointed out that before this loan was subscribed to the extent of $419,000,000, the Canadian people had already, since the outbreak of war, provided the Dominion government with $350,000,000, the amount of three previous domestic war loans. In 1913, Canada's borrowings, including those of the Dominion and provincial governments, municipalities, railways and other corporations, amounted to $373,000,000. This was the largest amount borrowed prior to the war, and amply testified to the strength of Canadian credit in the world's financial markets. Of this amount, $327,000,000 came from abroad, while $46,000,000 only was raised in Canada. In 1917, four years later, Canada's borrowings were $756,000,000, of which no less a sum than $564,000,000 was contributed by the people of Canada. In other words, while the borrowings in 1917 were only twice as great as in 1913, the amount which the Canadian people themselves supplied was twelve times as great.

As Mr. Rundle said, the advantages of owing money to oneself rather than to someone else are obvious. Canada has done well in the years of the war in helping to finance its own requirements. But," he very properly reminded us, "we must not lose sight of the fact that while the war continues, still greater things will be required of us. We are fortunate possessors of the power to respond." That power will be put to severe tests this year but strength and unity of effort will succeed.

"POOR RICHARD"

It was a happy inspiration which led Sir Edmund Osler to present the shareholders of the Dominion Bank at the annual meeting this week with a copy of the famous preface to "Poor Richard's Almanac for 1758." Sir Edmund, in recalling the wise sayings of Benjamin Franklin, stated that the admonitions of "Poor Richard" had done much to produce the thrift and to form the character of the people who now occupy the New England States. Poor Richard visited an auction sale of extravagances where these questions arose: "Pray what think you of the times? Will not these heavy taxes quite ruin the country? How shall we ever be able to pay them? What would you advise us to do?" The mythical sage concludes his advice against waste, idleness and so on, with these words: " 'And now, to conclude, Experience keeps a dear school, but fools will learn in no other, and scarce in that, for, it is true, we may give advice, but we cannot give conduct. However, remember this: they that will not be counselled cannot be helped; and, further, that if you will not hear Reason, she will surely rap your knuckles, as Poor Richard says.'

"Thus the old gentleman ended his harangue. The people heard it and approved the doctrine, and immediately practiced the contrary, just as if it had been a common sermon; for the auction opened, and they began to buy extravagantly." As Sir Edmund Osler's souvenir reminds us, the eighteenth century advice of Franklin is applicable to twentieth century war conditions.

TRADE AFTER THE WAR

The war after the war is a phrase which has grown less popular. There is antipathy to a continuance of belligerent conditions, even though they are transferred from the battlefield to the market place. While it may not be termed a war, it is plain that when peace is declared, there will automatically begin a keen struggle for all the business offering in the world's markets. A New York authority takes the view that the struggle between those nations which manufacture machinery, textiles, etc., such as England, France, Germany, Japan and the United States, "will make past competition for foreign commerce look like a sham battle."

The domestic development of the United States and Germany had scarcely reached the point of maturity at the end of the last century, and their manufacturing industries began to produce a considerable surplus for export only after 1895. Both countries have reached the point now, however, when broader foreign markets must be developed or the rate of profit and the standard of living will suffer. This has long been true of England. When the war is over, the growth of city population and increasing surplus of manufactured products will still prevail. A market for Germany's products will have to be found. In its quarterly bulletin on international commerce, the Alexander Hamilton Institute of New York express the opinion that if the Allies enter into an agreement to boycott the products of Germany's labor to any extent, these products will have to be sold somewhere, probably at a very low price. "But this would mean," it is said, "that the products of the Allies could not compete in those markets. It would be unwise for the Allied governments to attempt such a boycott for this reason. It is likely, however, that the banks of London and Paris in the future will restrict Germany's commerce somewhat by refusing to discount Germany's commercial paper as extensively as in the past. So far as the United States is concerned, even this would be unwise. We are not in the war to restrict Germany's commerce."

The matter of boycotting German merchandise will probably find its own level. Although high barriers may not be erected against German trade after the war, it will, we think, be a long time after the war's conclusion before a German traveller is given any sort of a welcome reception in Canada. This feeling will probably be more marked in the United States after their armies have been in the battlefields of Europe, say, for three and a half years. A silent boycott of some strength will be a natural consequence of Prussian aggression.

RAILWAY EARNINGS SATISFACTORY

Canadian Pacific Statement Will Show Earnings Between 11 and 12 Per Cent.—Grand Trunk Reports

The Canadian Pacific Railway Company's monthly statements for the full fiscal year ending December 31st last, would indicate that the annual statement will show earnings of between 11 and 12 per cent., under railroad account proper, on the $260,000,000 issue of ordinary shares. From the profits under railroad account, on which the company distributes 7 per cent. in dividends to its ordinary shareholders, there is deducted annually the net earnings of Pacific Coast Steamships, Commercial Telegraphs and News Department, the amount so deducted being transferred to a special income account. It is a variable amount, but within comparatively small limits. The pension fund provision is also variable, but does not bulk large, fixed charges having tended to contract slightly from year to year in the absence of new financing operations. If the various deductions from profits are estimated on the basis of the statement presented at the last annual meeting, a statement covering the last months of 1916 would be:—

Fixed charges	$10,265,102
Pension fund	400,000
Transfer to special income	2,288,142
Preference dividend	3,226,276
Total deductions	16,180,520

Would Leave Balance.

This amount taken from the net profits of $46,546,018 reported for 1917, would leave a balance of $30,365,198 available for dividends on the ordinary shares, or an amount equivalent to 11.7 per cent. earned against the 7 per cent. paid out of this account. The special income account remains the unknown factor in the actual results to be shown in the annual statement. For the six months ended December 31, 1916, it was $6,415,352, or almost equal to the total for the full fiscal year ended June, 1913. It rose to about $8,500,000 the following year, and in 1915 and 1916 was in the neighbourhood of $10,000,000. At the rate of earning power shown in the statement for the final six months of 1916, it should be approximately $13,000,000, which would represent another 5 per cent. additional on the ordinary shares, making the year's earnings from all sources equivalent to between 16 and 17 per cent.

Grand Trunk Reports.

The Grand Trunk Railway system reports for November are as follow:—

Grand Trunk Railway—November.

	1917.	Increase.
Gross receipts	£ 897,350	£ 10,250
Expenses	811,150	138,850

LIFE INSURANCE BENEFICIARIES

Judge Harvey Explains the Alberta Act at Underwriters' Meeting in Edmonton

Referring, in an address at a recent meeting of the Edmonton Life Underwriters' Association, to the Life Insurance Beneficiaries Act of Alberta, Hon. H. Harvey, chief justice of the province, said that under the present act a husband or wife or a child or grandchild or a mother is a preferred beneficiary of any assured, and any insurance moneys payable to any preferred beneficiaries are not considered part of the estate of the deceased. "This has two important consequences," he continued. "In the first place, the insurance moneys are not liable to payment of succession duties. Most of you are, no doubt, aware that on the devolution of an estate upon the death of its owner, in addition to the usual court fees for services rendered in granting probate of a will or letters of administration, a charge is made according to the value of the estate and subject to certain exemptions for the benefit of the public revenues. This method of raising revenue appears to have certain advantages over ordinary taxation, and if reasonable exemptions are made, it seems to minimize the hardship which any system of taxation must impose.

Encouragement by Legislature.

"In the young province of Alberta, where there are few large estates, the revenue produced is not as yet very great, but it will increase with the wealth of the province, and in the older provinces, such as Ontario and Quebec, where there are many wealthy persons, the amount is considerable. Nevertheless, however satisfied we may be of the justice of a taxing act, all of us prefer to let others pay the taxes, and the taking advantage of any provision furnished by the law to keep property free from a tax is in no sense an evasion of the law.

"The policy of the legislature is to encourage persons to insure their lives for the protection of those immediately dependent on them, and as one inducement it provides that such insurance shall be free from the consequences that would follow if it were part of the estate. The same principle of preferring the immediate dependents is expressed in the Succession Duties Act itself, for, while it provides that no duty shall be payable upon any estate that does not exceed $5,000, it also provides that when the estate devolves upon the immediate dependents no duty shall be payable unless it exceeds $25,000, and in the latter case, while the rate of duty for an estate up to $100,000 is only 1 per cent., the rate is as high as 11 per cent. when the estate passes to someone who is not a dependent or near relative.

Money Cannot be Taken.

"A much more important consequence, however, is that such insurance moneys cannot be taken from the beneficiaries by the creditors of the deceased. In one aspect this would seem to encourage dishonesty. Our general law does not permit a man to give away his property, even to his wife and children, so as to deprive his creditors of their just claims, but no doubt the legislature considers that a man is not going to pay his life insurance premium for the sake of defrauding his creditors, but, in the unlikely case of his doing so, it protects the creditors by allowing them the amount so paid out of the insurance, and there is little doubt that in the majority of cases, in this country at least, of persons of moderate incomes, the payment of the premiums is made out of what would otherwise go for the purchase of comforts or luxuries in which the wife and children would share, and of which they are consequently deprived by the fact of the insurance. Most men are honest, and would rather pay their creditors than not, but many are unfortunate, and at any time ill-fortune may come, and it should be a matter of great satisfaction to them to feel that whatever may happen their loved ones are protected.

Change Respective Beneficiaries.

"Our law does not limit the rights of the preferred beneficiaries to the cases where they are named in the policy, but permits the assured to make a declaration outside of the policy, which may be by will. The only thing that is necessary is that the policy or policies should be clearly indicated. Nor is it limited to beneficiaries existing at the time the policy is issued. A person may insure for the benefit of his future wife and children, and those who answer the description when the policy becomes payable will take the benefit, and if there are none to answer it, then the moneys are payable to the estate. The assured may designate the interest of each, and may change the respective beneficiaries and their respective interests by a subsequent declaration, and if he fails to define their interests they will take in equal shares.

"The borrowing value of a policy is a great consideration to many persons, and naturally so, because the obtaining of a loan is so simple and inexpensive, and the rate of interest is reasonable. This would be interfered with by making the policy payable to preferred beneficiaries, but by the policy itself the moneys may be made payable to his personal representatives, and by a declaration or by a will, made at the same time or subsequently, the moneys may be declared to be for the benefit of preferred beneficiaries, in which case they will be entitled to receive the full benefits of the insurance moneys that may become payable. It will be apparent that the provisions of this law might in some cases form a very forceful argument to secure an application for insurance."

CANADA'S COAL PROBLEM

Editor, *The Monetary Times.*

Sir,—Mr. A. V. White's article in *The Monetary Times* of January 4th, dealing with the conservation of our water powers, is of the greatest national importance, not only from the point of home manufacture, but as a trading proposition for a supply of coal for heating purposes, as electricity is not (at present at least) economically satisfactory.

I believe it is the opinion of experts that the peat bogs in this district and in Manitoba, are of too recent formation to be commercially available under present processes of manufacture; it has been tried here and in Manitoba and considerable money spent in the experiment at a heavy loss to the investors.

Our supply of wood fuel is now at a price ($6 per cord) that makes it dearer than coal at $10 or $12 a ton. The lignites of the West may become available if briquetted, but some different binder than that in use at present must be developed to make these briquettes satisfactory. Lignites could be used at mine head to produce electric current for transmission to adjacent districts by being put through a producer gas plant to operate electrical generators to furnish power for adjacent districts.

As one means of reducing coal consumption in the paper mills at Fort Frances, Ont., and International Falls, Minn., both plants under the control of the Minnesota and Ontario Power Company, the waste from their own sawmills and those of the Shevling Clark Company are no longer destroyed in a burner, but put through machinery reduced to uniform size and automatically fed to the fires with a mixture of crushed coal, reducing coal consumption 50 per cent.

There are, no doubt, a number of sawmills where their waste matter is still burned, that could be used to better advantage in adjacent factories for fuel purposes, but this is only a temporary supply, and it is in the immediate development of our Western coal veins on a large scale and with low freight rates to distant points, that we must look for relief from a very dangerous condition in the near future. Immediate action by the government is necessary if we are not to have a fuel famine long ere this war comes to an end, and, as has been already pointed out by Mr. A. V. White and others who look forward to actual conditions in the near future, the United States will have to retain almost the whole of its own supply for home demand.

I feel that I am only repeating what is patent to everyone who gives the fuel question any consideration at all. What the country needs, is that those who by training and experience are recognized authorities on this subject, should put into force practical measures of remedy.

Yours faithfully,
H. WILLIAMS (Mayor).

Fort Frances, Ont., January 24th.

At the annual meeting of the Bank of Nova Scotia on Wednesday, Mr. John J. Payzant retired from the presidency, which position he has occupied for thirty years. Mr. Charles Archibald was elected president, and Messrs. Geo. S. Campbell and J. Walter Allison, vice-presidents.

JANUARY MUNICIPAL BOND SALES

Total of $461,000 was Smallest, With One Exception, in Nine Years

The municipal bond sales in Canada during January totalled $461,000, compared with $890,000 in December last and $1,969,256 in January a year ago. The January records of municipal bond sales at home for the past nine years are as follow:—

January.	Municipal bond sales in Canada.
1910	$ 881,838
1911	420,337
1912	2,133,531
1913	1,337,500
1914	1,953,137
1915	1,784,947
1916	1,909,441
1917	1,969,256
1918	461,000

Last Month's Sales Small.

Last month's sales were, therefore, the smallest (with the exception of January, 1911), of the past nine years.

The following is a list of the sales in Canada in January last:—

Municipality.	Amount.	Rate per cent.	Term (years).
Ontario.			
Windsor	$355,000	5-6	Various
Walkerville	80,000	6	10 & 25
New Brunswick.			
Moncton	18,000	5	1923-1937

Sold in United States.

The following is a record of Canadian municipal bond sales in the United States during January last:—

Municipality.	Amount.	Rate per cent.	Term.
St. Thomas, Ont.	$10,000	5	....

This sale was made by Mr. E. A. Horton, mayor of the city, while in Indianapolis last week attending the supreme lodge of the Knights of Pythias. He sold the bonds to the insurance branch of that society. The money was received in New York funds. City Treasurer S. O. Perry is offering another $10,000 to the citizens in small lots. The proceeds will be used to cover grants to the British Red Cross, British navy and Y.M.C.A. overseas work.

Greater Winnipeg Issue.

Towards the end of the month an issue of $2,000,000 Greater Winnipeg Water District 5 per cent. 5-year gold bonds was made. Some of these bonds were sold during the current week, but the returns in regard to the entire issue will appear in our February records. The bonds are being sold both in Canada and the United States, and are offered at 98.62 and interest, yielding about 6¾ per cent.

No Saskatchewan school district bond sales were reported during January. The local government board of that province has for some time past recognized the necessity of conserving the larger sources of money supply to the needs of financing the war, and has systematically endeavored to introduce the practice of placing the debenture issues of local authorities with small investors at home. Its efforts in this direction have met with a reasonable amount of success, and many small issues are now being taken up locally.

Records of Past Years.

The sales of Canadian municipal bonds during the past three years were divided as follows:—

In	1915.	1916.	1917.
Canada	$31,910,214	$19,640,778	$17,955,714
Great Britain	....	....	....
United States	35,483,114	32,336,764	6,233,365
	$67,393,000	$51,977,542	$24,189,079

The Monetary Times' bond record shows the sales in Canada only during the twelve months of 1917, compared with the three previous years as follows:—

1915.	1916.	1917.
$ 1,784,947	$1,909,441	$ 1,969,256
3,047,011	1,419,909	458,874
2,572,357	2,027,741	229,013
8,603,094	1,979,852	1,182,974
3,464,281	2,649,000	1,375,039
2,395,744	3,043,283	1,642,003
1,618,422	1,521,525	3,814,489
1,087,415	852,447	4,637,836
2,768,484	960,435	440,268
1,245,874	1,361,665	398,771
1,645,892	1,246,480	917,191
1,676,693	669,000	890,000
$31,910,214	$19,640,778	$17,955,714

Difficulties of Financing.

By an order-in-council, dated December 22nd, 1917, the federal government has prohibited the issue, sale or offer for sale of all classes of securities, including debentures of local authorities, without the permission in writing of the minister of finance. Municipalities necessarily will have to confine their financing this year to the smallest possible amounts. Their bonds will have to be sold almost entirely to Canadian investors, as war finance is monopolizing the New York and London money markets.

A New York despatch says that many Canadian provincial and municipal bonds falling due within the next twelve months will no doubt be paid by the issue of new securities. According to recent reports, several Canadian cities are preparing to draw up some sort of plan whereby the holders of maturing bonds will accept an extension of the life of the debt, which ordinarily would be paid off within the next twelve or fifteen months. The recent meeting of the mayors of several western cities to discuss this matter forecasts united action in this respect.

INSURANCE AGENT'S PROSECUTION IN QUEBEC

The first conviction under the recent Quebec provincial legislation, making insurance agents' licenses compulsory, was obtained at Montreal on January 11th, when L. E. Kimpton pleaded guilty to violating the provisions of sub-section B of article 6960 of the Quebec statutes, by placing insurance without having obtained the license required by law. He explained that he had erred in good faith, the insurance in question having been on his own business, and he not having any knowledge of the enactment of the recent legislation which, for the first time, rendered it necessary for all insurance agents to take out such licenses. The charge was made by Mr. E. C. Cole, secretary of the Montreal Fire Insurance Brokers' Association, Inc., who, under the circumstances, did not wish to press the matter, and the magistrate accepted the accused's plea, and suspended sentence, condemning him simply to payment of the costs.

The legislation under which this action was taken came into force on May 1st, 1917. The scale of fees payable for licenses is as follows: Funeral or industrial insurance agents, $2; agents transacting other classes of insurance, in cities, $10; elsewhere, $5. Agents of mutual benefit associations licensed by the province, and municipal and parish fire mutuals, are excluded.

UNITED STATES EXPORTS TO CANADA

The following statement was issued last week by the United States War Trade Board: "To facilitate exports to Canada and Newfoundland there has been heretofore issued through the customs service a special license whereby goods have been permitted to enter Canada and Newfoundland without an individual license for each shipment, except in the case of commodities which the war trade board has heretofore found it necessary to conserve, and food whose exportation individual licenses have been required, as stated in the several announcements made by the board from time to time.

"The war trade board announces the publication in the war trade journal number four, of a revised list of such commodities which will hereafter require individual export licenses when exported to Canada and Newfoundland. Any commodity appearing in this revised list which hitherto has not required an individual license when exported to those countries will be passed by the collectors of customs in the same manner as heretofore when the shipment is covered by ocean or railroad bill of lading marked 'for export.' and dated on or before January 25, 1918."

UNIFORMITY OF INSURANCE LAWS

Protection of "Provincial Rights" is Discussed by Provincial Insurance Superintendents

In his annual report just published, Mr. A. E. Ham, superintendent of insurance and fire commissioner for Manitoba, makes an interesting reference to the proposed uniformity of provincial insurance legislation. He recalls that with a view to the promotion of facilitation of legislation respecting insurance, a convention of superintendents of insurance has recently been held in Winnipeg, at which representatives from Saskatchewan, Alberta, British Columbia, Ontario and Manitoba were present. A large number of insurance company managers also attended. Mr. Ham says:—

The standardization of health and accident policies was considered, and the desirability of legislation by the several provinces to secure same was unanimously agreed upon.

The admission of shareholders' stock notes and stock premium notes in the assets of the companies also came under discussion. The practice was strongly condemned and amendments necessary to their restriction or elimination from the assets were recommended.

The subject of uniform automobile insurance policy conditions was lengthily considered, and steps taken to prepare such conditions and secure legislative adoption by the various provinces.

Laws as to Preferred Beneficiaries.

The laws of the several provinces affecting preferred beneficiaries are so varied, that it was considered urgently necessary to secure uniformity with respect thereto.

The recent Dominion amendments of insurance and criminal law was another subject of discussion, and the necessity for the protection of "provincial rights," encroachment upon which appeared to be threatened, was strongly advised.

Uniformity of annual statement blanks was also recommended, and with reference to the nature of investments permitted, it was deemed desirable that in all the provinces uniformity should be secured, so that a company would not be able to do in one province that which would not be permitted by another.

It is intended to continue such conventions, and it is hoped that all the provinces of the Dominion will, in the future, co-operate to secure such uniformity of the law as will tend to more perfect supervision by the departments, more complete protection of the public, and the greater success of the insurance companies.

It was decided that the next convention will be held in Montreal, so that the eastern provinces may participate therein, and co-operate with a view to complete uniformity throughout the Dominion.

Fraternal Societies.

During the year, the accounts, books and securities of seventeen licensed insurance companies and six fraternal societies (whose chief offices are situated within the province) have been examined and verified by our inspector, and reports as to their standing and methods together with recommendations thereon, have been submitted.

The requirements of the Revised Dominion Insurance Act has caused the transfer of two British and one foreign company from the provincial to Dominion licensee's. Four other companies will probably be affected in like manner.

Of the twenty-six fraternal organizations that report the business done, there are eight whose chief offices are in the United States.

There are a number of foreign trades and labor organizations that grant insurance, sickness and funeral benefits to their members which make us returns to this department, and over which it is difficult to exercise control, the business being largely done by mail, I would respectfully suggest that an act to regulate trades and labor organizations having the benefits above named, should be passed in order to safeguard the interests of the working classes, who largely constitute their membership.

A license has been granted to the Dominion Gresham Guarantee and Casualty Company to transact the business of burglary, accident, sickness, guarantee and automobile insurance. Mr. F. J. J. Stark is general manager and secretary of the company with headquarters at Montreal.

VICTORY LOAN CALCULATIONS

Some Interesting Figures for Bankers and Investors Regarding Canada's War Bonds

The following figures have been issued by Messrs. W. L. McKinnon and Company, bond brokers, Toronto, in regard to Victory Loan bonds:—

Interest 5½% Payable June 1st and Dec. 1st.

Principal due Dec. 1, 1922; Dec. 1, 1927; and Dec. 1, 1937.

A full half-year's interest is paid on June 1st, although the subscriber's money will not have been invested for a full half-year by then.

Schedule for $1,000 Bond due Dec. 1st, 1937 (20-Year Bond).

The schedule following shows exactly how capital and income is returned at 5.61 per cent. This is correct to within 14 cents on the $1,000 for the subscriber whose bonds are fully paid by January 2nd.* He pays $991.08 ($100 on December 1st, plus $900, less $8.92 discount on January 2nd) for each $1,000 bond.

Value of $1,000 bond at a 5.61% yield rate as at Dec. 1st, 1917, is $991.22.

Figures as at the 1st day of June and Dec. in the year	Total amount actually paid by all the bonds and the coupons	Total amount of interest earned @ 5.61 p.c. on outstanding Capital as at date set forth	Amount of principal money repaid on date set forth	Amount of interest earned but not paid on date set forth. This is added to Capital outstanding	Capital outstanding on date set forth
Dec. 1, 1917					$991.22

	2,100.00	1,108.78	1.003.62	12.40	

*Those who do not pay for their bonds in full on January 2nd can also use this schedule for bookkeeping purposes. They should simply consider their capital outstanding on each $1,000 bond on June 1, 1918, as the amount shown on that date—namely, $987.06. No matter on what instalment dates the bonds were paid for, the holder should subtract $987.06 from the total amount actually paid for the bonds. The remainder represents (bonus of interest) capital money repaid on June 1st. The difference between this sum and $27.50 would represent the amount of interest paid for the first six months. This interest would be a few cents out on each $1,000. Then after June 1st, the schedule would work out exactly right to the cent on the basis of a 5.61 per cent. yield rate.

Schedule for $1,000 Bond due Dec. 1st, 1927 (10-Year Bond).

The schedule following shows exactly how capital and income is returned at 5.68 per cent. This is correct to within 28 cents on the $1,000 for the subscriber whose bonds are

---

†This is debenture stock.

LONDON CITY AND MIDLAND BANK, LIMITED

The directors of the London City and Midland Bank, Limited, report that the profits for the year ended December 31 last amount to £1,967,716, which, with £243,538 brought forward makes £2,211,254 for appropriation as follows: For payment of salaries and bonus to members of the staff who are engaged with his Majesty's forces, and bonus to other members of the staff, £304,519; to reserve funds for contingencies, £500,000; to payment of dividends for the year 1917, at the rate of 18 per cent. per annum, less income tax, £672,950, and to carry forward £733,785. The dividend was at the same rate for 1916 with appropriations of £840,107, and carry forward £243,538.

The new draft act as submitted to Premier Stewart has a recommendation providing for an increase of from 15 to 40 per cent. in compensation for workmen. It calls for the appointment of an administrative board. It is likely that the legislation will be brought in at the coming session of legislature.

We Care for Your Securities

Appoint us your Financial Agent, and we will look after all details in connection with your securities. We collect rents, mortgage interest, dividends on shares, etc., attend shareholders' or directors' meetings, buy or sell securities under instructions, pay taxes, insurance premiums, make returns as required by Federal Income War Tax Act, and advise in case events affect your interests. Our services save the losses frequently occasioned by a client's inattention to details. Write for particulars.

Going Overseas?

To those going overseas, whether in a military or civil capacity, to do their bit, or to those who contemplate spending the Winter away from home, and who may need a strong, reliable corporation to look after their affairs in their absence, we offer the suggestion that they leave a Power of Attorney in our favor. It will relieve them of all the details and worries incidental to looking after their Estates. Compared with the relief afforded and the service rendered, the charge would be small and the satisfaction great. Interviews invited; correspondence solicited. All business treated as strictly confidential.

CONTROL OF NEWSPRINT INDUSTRY

If the Raw Material, Newsprint, is to be Controlled, Why Not the Finished Article, the Newspaper?

In the light of similar action with respect to other commodities, the appointment of a "Controller of Newsprint and Bookprint" would suggest an acute shortage in Canada of the commodities named, said Messrs. Greenshields Company in a recent review. But what are the facts? they ask. Of the total output of newsprint in Canada to-day they say only 10 per cent. is required for the home market. The department of trade and commerce reports that, in the twelve months ending March 31st last, Canadian shipments of newsprint to the United States were of a value of approximately $21,000,000 of wood pulp and like products of a value of approximately $29,000,000. The value of newsprint consumed annually in Canada is placed by trade authorities at only $3,000,000.

"As a result of years of effort during which investors received a meagre return on their capital," continues the review, "if any at all, the pulp and paper industry has been built up to a point where its production, in excess of home requirements, brings in approximately $50,000,000 annually from the United States alone. It is entitled to rank as Canada's most important export manufacturing industry. Presumably, at this of all times, it might expect to meet every encouragement towards further expansion. Why then the appointment of a controller, with its immediate suggestion of restriction, and in the case of restriction in these times, its suggestion of a national emergency?

Present to Canadian Publishers.

"We have the official admission of the gentleman in charge of the recent inquiry into the costs of newsprint manufacture that 'the paper manufacturers have been making a present of $500,000 to the Canadian newspaper publishers.' So much for the results of the haphazard attempt to fix newsprint prices a year ago. We deprecated it at the time as vicious in principle, an unwarranted interference with the operation of the law of supply and demand. The unfairness which it worked to the manufacturers is evident in the opinion quoted from the commissioner who carried out the subsequent inquiry into mill costs.

"So far from the attempt to fix prices being abandoned, we have now the naming of a controller, with power to fix prices and to regulate supplies with a view to the requirements not only of Canada but the United States. For the sake of $500,000 which was saved to Canadian publishers by getting their supplies below market cost, a situation has been forced which endangers the free and profitable development of an export trade to the United States worth $50,000,000 a year to Canada. Whatever action is taken with respect to a price for newsprint in Canada will form the basis of a price to be fixed in the United States. An industry which might reasonably be expected to go out into the world's markets with the full encouragement of the nation is asked to start off under the handicap of restrictive measures at home.

"It is well to bear in mind that the agitation of Canadian publishers which brought about this situation was not based on any shortage of supplies. The 10 per cent. requirements of the home market were relatively small and the mills were prepared to fill them, irrespective of more profitable opportunities that might offer elsewhere.

Should Manufacturers Subsidize.

"If the price was to be higher than before the war, all other commodities have advanced in price, too. The publishers had the usual recourse in such circumstances—to advance the cost of what they sell, their subscription rates and their advertising rates. Some of them have done so. It has not been suggested that a controller of publishers be appointed; yet the public interest in whether the cost of a newspaper is to be doubled is vastly larger than the public interest in whether a publisher is to make a profit satisfactory to himself. If the raw material, newsprint, is to be controlled, why not the finished article, the newspaper? The fixing of a price for wheat had its logical corollary in a limiting of the profits on flour.

"In the final analysis, no argument can be adduced to show why newsprint manufacturers should be asked to subsidize the publishers not only at the expense of his profit in the domestic market but at the expense of his opportunity for profit in foreign fields. A government subsidy of $500,000 to the publishers would be absurd enough in its way but at least it would leave the paper industry with an opportunity to add a few million dollars to Canada's export trade, and with confidence to go about its legitimate business in its own way."

ROADS AND PRODUCTION

Premier Norris, of Manitoba, at a recent meeting of the cabinet council to discuss the increase of railway rates, urged the very grave importance of the step taken by the railway board in issuing the order, especially in regard to its effect on production. This was a question which, he said, no man in Canada could afford to overlook. "If," he said, "the railroads have to lose a little money for a year or two, or have to get it from another source, let them do it, but don't put an obstacle in the way of production. This order will just put the clock back more than any railroad man can explain in twenty-five years."

The new rates, Mr. Norris added, mean that in many cases live stock men would go out of business.

The hearing was then adjourned until March 1st.

CANADA PERMANENT MORTGAGE CORPORATION

The general statement of the Canada Permanent Mortgage Corporation, Toronto, for the past year shows that the company holds $26,742,535 of mortgages. As pointed out by Mr. W. D. Matthews, vice-president, at the annual meeting last week, the fact that it has been able to loan this immense sum of money on mortgages, and, at the same time, present a highly satisfactory financial statement, speaks well for the management of the corporation. This devolves upon the joint general managers, Mr. R. S. Hudson and Mr. John Massey; the secretary, Mr. G. H. Smith; the treasurer, Mr. W. C. Lee, and the inspectors. These gentlemen are all experts and have seen long service in the business. They are chiefly responsible, with the assistance of the directors, for the splendid reputation which the Canada Permanent Mortgage Corporation has long held for a sound and progressive policy.

Several speakers at the annual meeting referred to the careful inspection of all the properties by the company's own experienced inspectors before loans are made to borrowers. The system of inspection is so thorough that not only are losses minimized, but they are usually foreseen. A mortgage company, even with every possible precaution, cannot fully guard against borrowers proving unsuccessful. The farmer who meets with unforeseen misfortune becomes discouraged and fails to meet his obligations, usually allows his property to deteriorate, and occasionally, when companies are reluctantly compelled to find a purchaser for it, the full claim cannot be realized. In the balance sheet of the Canada Permanent, ample provision has been made for any possible losses.

Mr. W. G. Gooderham, president, reminded the shareholders that the investment of money outside the United Kingdom is not encouraged by the government of Great Britain, while the interest obtainable by investors in British government securities is so attractive, that at the high rates which would have to be paid to compete therewith, the company could not make profitable use of the money which might be obtained. The amount of the Canada Permanent's sterling debentures, therefore, again shows some diminution. But for this fact, together with the increased cost of borrowed money, it would have been possible to have produced greater profits.

"The amount of our deposits and of our debentures payable in Canada," said Mr. Gooderham, "have both slightly increased during the year. This is gratifying in view of the two issues of Canadian war loans in 1917, which have been widely distributed among all classes. It is recognized that our established mortgage companies occupy an important position in the economy of the Dominion. They provide the owners of land with money, which is vitally necessary to enable them to increase production, and the investment of moneys by the Canadian people in our debentures is therefore not discouraged by the government, as is the sale of many classes of bonds and other securities."

The company's net profits for the year, after deducting interest on borrowed capital, expenses of management, all charges and losses, together with war taxes and contributions to Red Cross and patriotic funds, amounted to $852,325. The balance at the credit of profit and loss at the beginning of the year was $195,652, making available for distribution a sum of $1,047,977. This sum has been appropriated as follows: Dividends at the rate of 10 per cent. per annum, $600,000; transferred to reserve fund, $250,000; balance carried forward at credit of profit and loss, $197,977.

"INVESTMENTS"

A MUCH MISUSED TERM

Many who should be, and think they are laying up money for their old age, are misled into so-called "investments," where their hard-earned money is jeopardized, and frequently lost, though it is of the utmost importance to them and to those who may be dependent upon them that its absolute safety should be beyond peradventure.

To those who should invest safely and with caution, not speculate, the bonds of the Canada Permanent Mortgage Corporation can be confidently recommended. This Corporation is most conservative in the investment of the funds entrusted to it. For more than sixty years it has held a leading position among Canada's financial institutions, and its bonds are a LEGAL INVESTMENT FOR TRUST FUNDS. They are issued for one hundred dollars and upwards. Write for full particulars.

PROPOSALS FOR DECIMAL COINAGE

New Series to Replace Penny Units and Pound Sterling to Remain as Standard are Recommendations

A report has been issued by the British Decimal Association to the effect that the Institute of Bankers, the Association of Chambers of Commerce of the United Kingdom, and the Decimal Association, after prolonged conference, have planned details of a new coinage system both convenient and desirable. "One pun, two" would be represented, for example, by "1.10 pounds."

Because of the universal recognition of the pound sterling in the settlement of international transactions, this ancient and honorable unit is retained as the standard element in the proposed system. On the other hand, the venerable penny is excluded, inasmuch as it is not a decimal submultiple of the pound sterling. An entirely new series replaces the penny units. The present crown (5s.), half-crown (2s. 6d.), and three-pence (six cents), all silver coins, are to be abolished.

"Mil" is the New Unit.

The one new unit to be introduced is the "mil," a designation taken, like the United States mill, from the Latin equivalent of "thousand," since the mil will represent the one-thousandth fraction of a pound. Coins will be issued, should the system be adopted, with respective values of one, two, three, four, five and ten mils.

Thus the coins of higher value would be the gold sovereign, or pound sterling, worth 1,000 mils; the gold half-sovereign, or 500 mils; the silver double florin (four shillings), or 200 mils; the silver florin (two shillings) or 100 mils; the silver half-florin, or shilling, equal to 50 mils; the silver quarter florin, or six-pence, worth 25 mils. The ten and five mil pieces would be nickel, the four remaining mil pieces would be bronze.

Owing to the exclusion of three silver coins and of all the present bronze coins, the total number of units would be unchanged. Also the values of the present gold and silver coins would remain unaltered. Possible confusion of the proposed nickel coins with silver coins would be prevented by giving the nickel coins a scalloped edge or by otherwise varying their outline.

Adjustment of Coin Values.

The suggested system would make possible a more equitable and more finely graduated adjustment of coin values to the fluctuations of commodity prices. At present, when the wholesale cost of any necessity is increased by 20 per cent., the retailer must raise the price of halfpenny goods by 100 per cent. to 1 penny, just as, in a corresponding case, the American retailer must double the price of a one-cent article in order to offset an increase of one-fifth of a cent. in the wholesale cost. So in Great Britain now penny goods really worth one-fifth more must be sold at retail for three half pence; for, though the farthing (¼ penny) is coined, it is seldom used. But the new system would provide coins practically equivalent to one-quarter, one-half, and three-quarters of a penny.

The simplicity of the proposal from the viewpoint of record and calculation appears in the table of decimal equivalents:—

Sovereign	1.000	pound	Ten-mil	.010	pound
Half-sovereign	.500	"	Five-mil	.005	"
Double florin	.200	"	Four-mil	.004	"
Florin	.100	"	Three-mil	.003	"
Half-florin	.050	"	Two-mil	.002	"
Quarter-florin	.025	"	One-mil	.001	"

The Maryland Assurance Corporation has been licensed to transact accident and sickness assurance in Canada, Mr. F. J. Lightbourn, of Toronto, being chief agent.

The new government standard flour was milled by all city flour mills on Monday, in compliance with the regulations of the food controller, and was on the Winnipeg market on Tuesday morning at a price of 50 cents less per barrel than the first-grade patents. These were selling in carload lots at $11 per barrel. The new flour is listed at $10.50 per barrel in carload lots, with an additional 10 cents per barrel on ton lots and 20 cents on smaller lots.

CROPS BROUGHT BIG SUM

Total of $1,144,636,450 Received for Our Field Crops Last Year

The Census and Statistics Office, Ottawa, has issued its annual estimate of the yield, quality and value of the principal grain crops of Canada for the season of 1917, as compared with 1916. For the provinces of Quebec, Saskatchewan, Alberta and British Columbia the agricultural statistics of 1917 were collected in co-operation with the provincial governments, and, consequently, for those four provinces the reports of both the Dominion and provincial statistical authorities will record identical results.

The total yield of wheat for Canada is returned as 233,742,850 bushels from 14,755,850 acres, as compared with 262,781,000 bushels from 15,369,709 acres in 1916. Of oats, the total yield is 403,009,800 bushels from 13,313,400 acres, as compared with 410,211,000 bushels from 10,996,487 acres in 1916. The yield of barley is 55,057,750 bushels from 2,392,200 acres, as against 42,770,000 bushels from 1,802,996 acres in 1916. The average yields per acre of these crops are, in bushels, as follows, the corresponding figures of 1916 being placed within brackets: Wheat, 15.75 (17.10); oats, 30.25 (37.30); barley, 23 (23.72). The total yields in 1917 of the remaining crops are as follows: Rye, 3,857,200 bushels; peas, 3,026,340 bushels; beans, 1,274,000 bushels; buckwheat, 7,149,400 bushels; mixed grains, 16,157,080 bushels; flaxseed, 5,934,900 bushels; corn for husking, 7,762,700 bushels.

Quality of Grain Crops.

The quality of the grain crops of 1917, as indicated by the average weight in pounds per measured bushel, is as follows: Fall wheat, 59.37 pounds, as compared with 59.52 pounds in 1916; spring wheat, 59.48 pounds, as against 56.51 pounds; all wheat, 59.46 pounds, as against 57.10 pounds; oats, 33.55 pounds, as against 33.86 pounds; barley, 46.97 pounds, as against 45.66 pounds; rye, 53.44 pounds, against 54.95 pounds; peas, 59.81 pounds, against 59.88 pounds; beans, 59.70 pounds, against 60 pounds; buckwheat, 46.49 pounds, against 46.35 pounds; mixed grains, 44.41 pounds, against 43.13 pounds; flaxseed, 54.73 pounds, against 54.90 pounds; and corn for husking, 56.18 pounds, against 56.51 pounds.

The average values per bushel of grain crops for all Canada in 1917, according to the prices returned by the crop-reporting correspondents of the Census and Statistics Office, are higher than in any previous year. They are as follows: Fall wheat, $2.08, as compared with $1.54 in 1916; spring wheat, $1.93, against $1.29; all wheat, $1.94, against $1.31; oats, 69 cents, against 51 cents; barley, $1.08, against 82 cents; rye, $1.62, against $1.11; peas, $3.54, against $2.22; beans, $7.45, against $5.40; buckwheat, $1.46 against $1.07; mixed grains, $1.16, against 88 cents; flax, $2.65, against $2.04; and corn for husking, $1.84, against $1.07.

Total Values of Field Crops.

The total farm values of the principal grain crops of 1917 are estimated to be as follows: Wheat, $453,038,600, as against $344,096,400 in 1916; oats, $277,065,300, as against $210,957,500; barley, $59,654,400, as against $35,024,000; rye, $6,267,200, as against $3,196,000; peas, $10,724,100, as against $4,819,000; beans, $9,493,400, as against $2,228,000; buckwheat, $10,443,400, as against $6,375,000; mixed grains, $18,801,750, as against $9,300,900; flaxseed, $15,737,000, as against $16,889,900; and corn for husking, $14,307,200, as against $6,747,000. Adding the value of the root and fodder crops, which was published last November, the total value of the field crops of Canada is estimated at $1,144,636,450, as compared with $886,494,900 in 1916 and $825,370,600 in 1915. The totals comprise: Grain crops, $875,532,350, compared with $639,733,700 in 1916 and $601,093,300 in 1915; potatoes and sugar beets, $81,598,200, compared with $51,422,300 in 1916 and $37,235,300 in 1915; and fodder crops, $187,505,900, compared with $195,338,900 in 1916 and $187,042,000 in 1915. The total value of $1,144,636,450 for 1917 is the highest on record, and this is the first time that the value of the field crops of Canada has exceeded one billion dollars.

The Boston Insurance Company has received a Dominion license to transact fire insurance in British Columbia only, Mr. A. Z. deLong, of Vancouver, being chief agent.

Successful Year Reviewed at National Trust Meeting

Assets Increase Over $7,500,000 and Now Total $76,722,635.36—Earnings Also Increase—Speeches by President, Vice-President and General Manager in Reviewing Business Year Emphasize Canada's Part in the War—Mr. W. E. Rundle Joins the Board and is Elected a Vice-President.

The Annual Meeting of the Shareholders of National Trust Company Limited, was held January 30th, at noon, in the Company's Board Room, with the President, Sir Joseph Flavelle, in the chair. In moving the adoption of the Report and Statement, which appear below, the President said:—

We meet again under the anxious strain of war, with its suffering and loss of men and property. We feel the weight of our trouble as the lists of casualties appear. The gallant men who have fallen or who have returned home disabled were but the other day at school or college, or were in our offices or workshops, and passed in and out of our homes with all the promise of life before them. They have honored Canada by their devotion, courage and sacrifice. We pay them tribute.

Canada's Part in Financing War.

We have given our pledge to see this war through to the end and to assume responsibility for a sustained supply of men and money. Canada is spending between $300,000,000 and $350,000,000 per year to equip and maintain 400,000 men in training and at the front. Somewhat more than half of this expenditure is paid by the Imperial Treasury on our account in England to maintain and arm our men who are overseas.

On the other hand, the Canadian Government and Canadian Banks loaned to the Imperial Treasury in Canada during 1917 $400,000,000, and will loan a similar sum in 1918 to assist the Treasury in paying for munitions, war supplies, ships and foodstuffs produced in Canada and purchased by Great Britain for shipment to British and French ports.

Interest on Canada's Debt.

When, therefore, we consider the interest burden which has to be borne by reason of our greatly increased national debt, we shall do well to remember that by May of this year $700,000,000 of our borrowings during the war will have come from our own people. Similarly we should remember that by the end of 1918, and during the period of the war, Canada will have loaned to the Imperial Treasury $300,000,000 more in Canada than the Imperial Treasury will have loaned to us in Great Britain.

We will thus pay to our own people a large share of the interest occasioned by War Loans, and will for the first time collect from Great Britain an important sum for interest upon net advances made to the British Treasury during the war.

Concurrently, we have had redundant ordinary revenues. From these we will pay during the current year all the capital and expense charges of government, including pensions and interest upon war debt, and if, as is probable, we close the current fiscal year as in March, 1917, with a large credit balance, we shall have a surplus of from thirty to forty million dollars to apply directly upon war expenditures.

These results have been possible owing to the accumulated savings of our people during the war, incident to the high prices of farm products, the great production of munitions and war supplies, and full employment of labor at remunerative rates.

Canada Asked to Establish Credits.

As the war progresses, the strain upon Great Britain becomes greater. While her assets are abundant, and her promise to pay unquestioned, the Imperial Treasury frankly states:—

"We are unable to supply dollar credits in Canada with which to pay for the food, munitions, ships and supplies we desire to buy from you and of which we are in urgent need. Will you help us by loaning money to pay for these purchases?"

Here lies the duty and opportunity of Canada in which all can share if all will make the effort. Co-operation and united effort in production, and firm personal discipline in saving, will enable us to discharge the duty and take advantage of the opportunity. This is but a small obligation for the men and women who remain at home to undertake. It is, nevertheless, a vital one.

The Company's Year.

Referring to the financial statement just presented, I believe you will consider it a most satisfactory one.

The assets under administration again show a substantial increase over those of the previous year. This, with the increase in the earnings, is an evidence of the continued growth of the Company.

It becomes increasingly apparent that the public considers a Trust Company the safest custodian of trust funds and estates.

Your Directors deeply regret having to record the death of Sir Lyman Melvin Jones. Sir Lyman took a keen interest in the affairs of the Company, and through his death we have lost a faithful friend.

Mr. Thomas Findley was elected to fill the vacancy on the Board caused by the death of Sir Lyman Melvin Jones.

During the year your Directors authorized the following subscriptions:—

$1,000 to the Toronto Military Service Fund of the Young Men's Christian Association.

$250 to the Italian Red Cross Society.

$2,000 to the British Red Cross Society.

$1,000 to the Navy League of Canada.

And these, with the $11,000 previously authorized, make a total of $15,250. In addition, your Directors have since the 31st December, 1917, authorized a further subscription of $10,000 to the Toronto and York County Patriotic Fund Association and the Toronto Branch of the Canadian Red Cross Society, and $250 to the King George and Queen Mary Maple Leaf Club of London, England, which will be payable during the present year.

A resolution confirming these subscriptions will be submitted to you to-day.

Before moving the adoption of the Report, I will ask the General Manager to address the meeting.

General Manager's Address.

The General Manager, Mr. W. E. Rundle, spoke as follows:—

I wish to begin my remarks to-day with a few words regarding our staff. The loyalty and efficiency of its members, always marked, never stood higher. Our men have responded freely to the call to arms, 51 having enlisted with the Canadian forces. Of these five have been killed in action. It is fitting that to-day our hearts should go out, as they do, in loving sympathy to the relatives and friends of these brave and noble men who have given their lives that we might live. Others are now lying wounded, and to them we express the earnest hope of a speedy and full recovery.

Among those who fell was Captain Percival Molson, M.C., Manager of our Montreal Office. He was killed in France on July 5th last. Many of you will recall that he was with us a year ago at our Annual Meeting, having returned a few months before to recover from a very serious wound. Captain Molson was a man of unusual character and ability. His sincerity and charm of manner endeared him to all who knew him. A fine soldier, he died as he had lived.

Staff Carries on With Reduced Numbers.

An increasing burden was cheerfully borne by the staff last year. The added duties imposed by a greater volume of business and by enlistment in the army, made the work unusually heavy. To assist the regular staff we have added thereto an increasing number of women throughout the year.

This twentieth Annual Meeting of the Shareholders finds us able to present a report which, I believe, will be considered satisfactory by all concerned. On the 1st September next the Company will see its twentieth birthday, and when we meet a year hence it will be fitting to look back over the twenty years and review in detail the Company's progress in that period.

Year's Business Satisfactory.

The chief outstanding points in the statement now presented for 1917 are the substantial increase in the net earnings and the large addition to the Assets under the Company's administration.

The net earnings for the year amounted to $251,333.94, an increase over the preceding year of $15,079.72. Stated in another way, the Company earned last year 16¾ per cent. upon its paid-up Capital, or 8⅜ per cent. upon its combined Capital and Reserve. This result has been obtained notwithstanding that during the year many mortgages were paid off and the proceeds reinvested in lower interest-bearing securities.

Farmers Paying Mortgages.

Not only were mortgage interest payments well met during the last twelve months, but there was and has been a growing tendency of late on the part of mortgagors—especially farmers—to pay off their mortgage indebtedness.

Good crops and high prices for farm products have placed the agricultural community of the Dominion in a greatly improved financial position; hence the ability of many to pay off their mortgages. This, of course, is a splendid thing for the country generally—and what is good for the country must inevitably result in the long run for the good of its financial and other institutions. But manifestly the immediate effect is to reduce the earnings of trust companies and all other mortgage loan institutions on their mortgage investments, because they cannot reinvest at quite as favorable interest rates. Moreover, as the demand for mortgage loans has fallen off since the war, the repayments to which I have referred have been largely reinvested in Government and Municipal securities. The Balance Sheet now presented shows a considerable increase in our holdings of securities of this character. This class of security, while yielding a much higher rate than was obtainable previous to the war on similar securities, does not yield as high a rate as the mortgages paid off.

The net result is a reduction in the average rate of interest obtainable on the total invested funds. Our Company is fortunate, however, in that it has been able not only to overtake the loss of interest referred to, but to increase its earnings because of the remuneration received upon its greatly increased volume of estates and trust business.

Increase in Earnings.

The net earnings, together with $96,314.68 brought forward from the previous year's Profit and Loss Account, enabled your Directors to pay dividends amounting to $150,000, or at the rate of 10 per cent. on the Capital Stock, or 5 per cent. on the combined Capital and Reserve; to write $50,000 off the Company's Office Premises Account; to pay $15,250 in subscriptions to Patriotic, Red Cross and other funds; to provide $10,000 to meet the Dominion Government Income War Tax, which though for the year 1917 is not yet payable, and to carry forward $122,398.62 into open Profit and Loss Account.

Assets Increase More Than 7½ Millions.

The Assets under administration now amount to $76,722,635.36, an increase during the past year of $7,525,580.75, and I am happy to say that all our Offices have contributed to this result. The figures are large. They speak for themselves, and much louder than words can do of the public confidence the Company enjoys. I have frequently reminded the Shareholders that in addition to administering the Assets shown in the Balance Sheet, there are many services performed by the Company—such, for example, as that of Trustee under mortgage for bond issues, Transfer Agent and Registrar for shares of outside Companies, custodian of property, deeds and securities for safekeeping and escrow transactions of almost innumerable character, of which our statement gives no indication. These services, nevertheless, entail a great deal of executive as well as clerical work. Hence the Company's activities are even greater in extent than the figures representing the Assets under administration would indicate.

I desire to point out that our mortgage investments are of an excellent character. They are made only after an inspection and report upon the property by our own Inspectors, who are salaried officials, and are mainly upon improved farm property.

Notwithstanding the continued downward trend of the prices of securities since the outbreak of the war, it will be gratifying to the Shareholders to know that the bonds, debentures and stocks held on Capital and Guaranteed Trust Account are carried in the Balance Sheet presented to-day at figures substantially below the present market prices.

The strong liquid position of the Company is evidenced by our Call Loans, which are well margined, and by the amount of cash on hand and in the bank.

The report of the Auditors is appended to the Balance Sheet submitted, and you will observe from their certificates that all trust funds and investments under our care are kept separate from the Company's own funds and investments and are shown on the books of the Company as belonging to the several Trusts, Estates, and Agencies on behalf of which they are held.

The Inspection Committee of the Board of Directors, in pursuance of the Company's By-Laws, has made its inspection and report to the Board regarding the investments made by the Company, and its report is presented to you herewith. The value and importance of such an inspection, in addition to the usual audit of the books and securities, will be apparent to the Shareholders and the Company's clients.

Canada's War Loans and the Company's Share in Them.

The most notable financial event of 1917 in Canada was the Victory Loan. In response to a request of the Canadian people by the Finance Minister to lend the Dominion Government $150,000,000, the people offered $419,000,000,—a really wonderful performance. The full significance of these figures is only grasped when bearing in mind that the Canadian people had already, since the outbreak of war, provided the Dominion Government with $350,000,000, the amount of three previous domestic War Loans. The Finance Minister, the various Victory Loan organizations, the Press, the Pulpit, and the people of Canada have cause for a justifiable pride in the achievement.

Our Company was able to subscribe for $3,800,000 of Victory Bonds. This was all new money, and included, of course, not only Capital and Guaranteed Trust Funds, but moneys held for investment as Executor and Trustee.

It might interest the Shareholders if I were to summarize just here the Company's subscriptions to the four domestic War Loans placed by Canada. They are as follows:—

To the First Loan	$ 250,000
To the Second Loan	650,000
To the Third Loan	1,250,000
To the Fourth (Victory) Loan	3,800,000
A total of	$5,950,000

Canadians Lent 12 Times as Much in 1917 as in 1913.

In the year 1913, Canada's borrowings, including those of the Dominion and Provincial Governments, Municipalities, Railway and other Corporations, amounted to $373,000,000. This was the largest amount borrowed prior to the war, and amply testified to the strength of Canadian credit in the world's financial markets. Of this amount, $327,000,000 came from abroad, while $46,000,000 only was raised in Canada. In 1917, four years later, Canada's borrowings were $756,000,000, of which no less a sum than $564,000,000 was contributed by the people of Canada. In other words, while the borrowings in 1917 were only twice as great as in 1913, the amount which the Canadian people themselves supplied was twelve times as great.

The President has already reminded you that a large part of Canada's borrowings in 1917 were in turn loaned to Great Britain. Our loans to Britain constitute an admirable investment for Canada, while at the same time they afford valuable assistance to the Mother Land.

Much of Canada's Debt Owed to Canada's Self.

The advantages of owing money to oneself rather than to someone else are obvious. Canada has done well in the years of the war in helping to finance its own requirements. But we must not lose sight of the fact that while the war continues, still greater things will be required of us. We are fortunate possessors of the power to respond.

Must Increase Food Production.

At recent meetings of banking and other institutions, emphasis has been given to the seriousness of the world's food problem. The subject is so momentous, so vital to the Allies' success in the war that persistent reference to it is amply justified. One wonders whether we who live in countries so largely agricultural will fully realize, before perhaps it is too late, the bearing of this question not only upon the armies in the field, but upon their civilian populations, in determining their power of resistance. Already hundreds of thousands of people in Italy are upon the verge of starvation. In France conditions in some quarters are but slightly better. In Great Britain privation begins to look into the faces of many. In these circumstances, a heavy duty and responsibility rests upon the North American Continent, with its unlimited agricultural possibilities, to do its utmost both to produce and conserve food. The time for seeding will be upon us in but two short months,—and as we sow so shall we reap.

The outlook at the moment for the ensuing year seems to be one of continued industrial activity. With labor in great demand, with high wages, with high prices for farm products and for merchandise, and with money freely in circulation, Canada's experience in 1918 will probably be much the same as during the past year, unless through the defeat or surrender of the enemy, the war meanwhile should end. When that end will come, no one can foresee. A year ago, great hopes were expressed,—and not without some warrant,—that the year 1917 would see the enemy defeated. But unforeseen events have postponed our expectations. If, however, we stand at the threshold of a new year with less prophetic sight, we also stand with strengthened purpose to persevere to a victorious end.

War Reveals National Resourcefulness.

A period of readjustment will inevitably follow the war, during which those who have meanwhile conserved their resources will benefit from that course. Whether after-war conditions will spell good or hard times, whether the period of readjustment which will follow the declaration of peace will be of long or short duration, is a matter wherein there can be no certainty of forecast. It is a realm for intellectual speculation. This, however, is certain, that great and grave questions will arise after the war for solution in Canada as elsewhere. They will be varied in character and will run the whole gamut of life. They probably will impose hardship, sacrifice and suffering. They will call for the best that is in us. We shall face them with courage and a virile Canadianism. One of the great lessons of the war is the resourcefulness of nations in overcoming obstacles which would have been thought insurmountable. Who would have thought that Canada could raise an army of 500,000 men, could in a single appeal accomplish a Victory Loan of $400,000,000, could manufacture articles with the precision of a five-thousandth part of an inch? And yet all this will have been accomplished in less than four years' time. Who would have predicted that Great Britain could raise an army of 5,000,000 men, or provide $37,000,000 a day to finance a war? Who would have imagined that the United States would gather an army of a million men in nine months? Who would have believed that she could appropriate in one year for expenditure, as she has done for 1918, eighteen and a half billion of dollars whereas her total expenditure from the date of her independence down to the time she entered this war was but twenty-nine billions? These illustrations are but a few which indicate the reserve power which lay hidden in nations. The war has quickened man's perceptions, stimulated his initiative, revealed his courage and strengthened his purpose. It is this new giant who will meet new conditions.

Confidence in Canada.

We in Canada have no reason to think that our resourcefulness as a people will falter or fail us after the war. We have a country and a people abounding in material, moral and spiritual resourcefulness. The wastage of war can only be made good from the materials which come from the ground. To this extent—and it is important—countries like Canada, which abound in raw materials, obviously possess advantages over less favored nations. I believe that if we but work together in mutual faith and good-will, we can face whatever lies before us in sober confidence.

Before closing I desire to acknowledge the valuable services of Messrs. Thomson, Dickson & Shaw, and of Messrs. Finlayson, Auld & Mackechnie, agents of the Company at Edinburgh and Glasgow, respectively.

Mr. Z. A. Lash's Address.

In seconding the adoption of the report, Mr. Z. A. Lash, K.C., said:—

It will not be necessary for me to deal with the success of this Company during the past year. We all know that the Company is progressing splendidly, but our attention at the present time is more drawn to the great events which are happening in the world than to the business of any particular Company. The President began his remarks by referring to the war and to war business. The General Manager has dealt with the details of the Company's business, and he also felt impelled to refer to the events of the war and what has been done by the people of Canada in connection with it. They have shown that in material resources Canada has displayed her wonderful strength. They have shown that in the raising of money the people have responded splendidly. We know that her record in the raising of men is equally good, 400,000 having volunteered.

But there is one other thought that occurs to me. It is that in addition to giving money, in addition to the volunteering of the men who went to the front, giving their lives to their country, those who have remained at home have shown equal earnestness in what they have done and have attempted to do towards the success of the war. Doctors have gone to the front, abandoning fine practices in the various cities and towns of Canada. Women also have done wonderfully well. Nurses have volunteered by thousands and have devoted their lives at the front to the care of the wounded and the sick. The business men of Canada have offered their services wherever they could be accepted. Men of property have offered their dwellings free for the service of their country.

Canada has found her soul, and there is no reason to suppose that the generosity which has come from the conditions surrounding Canada at the present time is going to evaporate merely because of the return of peace. I believe that the great spirit of self-sacrifice, the spirit of patriotism and unselfishness that has been shown by the community as a community, and by individuals as individuals—men and women—will be maintained for many, many years, and that we shall find that we are living in a different kind of community from that in which we were living before these great qualities were brought to the surface.

Now, as I say, business men have offered their services free. They have left their homes. They have settled in other cities. They have done what they could do to promote the public interest in these troublous times, and I am sure that we can all say that no one has devoted more broad-minded business ability than the President of this Company. For two years he has devoted himself exclusively to the great work which he undertook. He left his home. He left his business. He devoted ability which is priceless and which is shown by its results in connection with the Imperial Munitions Board. I think the Shareholders of this Company are glad to know that his services have been recognized by His Majesty in conferring upon him the honor which he so fully deserves.

I know he would be the last to look for remarks of this kind. I feel, however, that meeting here together as the Shareholders of this Company, he being present for the first time since he was called to Ottawa—he was not here last year, showing how continuous his duties have been—I feel that the Shareholders will be glad to give some expression to our feeling of pride in the great work which the President of this Company has done.

I second the adoption of the Report.

The Report was unanimously adopted.

NATIONAL TRUST COMPANY, Limited

REPORT AT ANNUAL MEETING OF SHAREHOLDERS

The Directors have pleasure in submitting herewith their Twentieth Annual Report, showing statement of the Assets and Liabilities of the Company as at 31st December, 1917, together with the Profit and Loss Account for the year ending on that date.

The net Profits, after providing for all cost of Management, Directors' and Auditors' Fees, Contingencies, etc., amount to $251,333.94. To this must be added the sum of $96,314.68 brought forward from 1916, making the total at credit of Profit and Loss Account $347,648.62, which has been appropriated as follows:—

(a) To pay four quarterly dividends at the rate of ten per cent. per annum, amounting to $150,000.
(b) To write off Company's Office Premises, $50,000.
(c) To pay subscriptions to Patriotic, Red Cross and other Funds, $15,250.
(d) To provide for Dominion Income War Tax, $10,000.
(e) To carry forward in Profit and Loss Account, $122,398.62.

Respectfully submitted,
J. W. FLAVELLE, President.

AUDITORS' CERTIFICATES.

We have audited the books of, and the securities held in respect of Capital and Trust Funds at, the Head Office of National Trust Company, Limited, for the year ended 31st December, 1917, and we report thereon to the shareholders as follows:—

The books are properly kept; the securities are in order. The Trust Funds and investments are kept separate from the Company's own funds and investments and are shown on the books of the Company as belonging to the several Trusts, Estates and Agencies, on behalf of which they are held; and

We certify that our requirements as auditors have been complied with, and that the above Balance Sheet (in which the accounts of the Branch Offices of the Company are duly incorporated as certified by their respective Auditors) is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by its books.

JOHN MACKAY,
GEO. EDWARDS,
Auditors.

I have audited the books of, and the securities held in respect of Capital and Trust funds at the Montreal Office of National Trust Company, Limited, for the year ended the 31st December, 1917, and I report thereon to the shareholders as follows:—

The books are properly kept; the securities are in order; the Trust funds and investments are kept separate from the Company's own funds and investments, and are shown on the books of the Company as belonging to the several Trusts, Estates and Agencies on behalf of which they are held; and I CERTIFY that my requirements as Auditor have been complied with, and that the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs at its Montreal branch as shown by its books.

G. DURNFORD, C.A.,
Auditor.

We have audited the books of, and the securities held in respect of Capital and Trust Funds at the Winnipeg, Edmonton, Saskatoon and Regina Offices of National Trust Company, Limited, for the year ended 31st December, 1917, and we report thereon to the shareholders as follows—

The books are properly kept; the securities are in order. The Trust Funds and investments are kept separate from the Company's own funds and investments and shown on the books of the Company as belonging to the several Trusts, Estates and Agencies, on behalf of which they are held; and

We certify that our requirements as auditors have been complied with, and that the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs at the said Branch Offices as shown by their books.

WEBB, READ, HEGAN, CALLINGHAM & CO.,
Auditors.

The following were elected Directors of the Company for the ensuing year:—

DIRECTORS

SIR JOSEPH FLAVELLE, Bart., President The Wm. Davies Company, Limited.
Z. A. LASH, K.C., LL.D., of Messrs. Blake, Lash, Anglin & Cassels, Barristers; Vice-President Canadian Bank of Commerce.
E. R. WOOD, President and Managing Director Central Canada Loan & Savings Company.
HON. MR. JUSTICE BRITTON.
GEORGE H. WATSON, K.C., of Messrs. Watson, Smoke, Smith & Sinclair, Barristers.
CHESTER D. MASSEY, Hon. President Massey-Harris Company, Limited.
ELIAS ROGERS, Vice-President Imperial Bank of Canada.
ALEX. BRUCE, K.C., of Messrs. Bruce, Bruce & Counsell, Barristers.
H. C. COX, President and General Manager Canada Life Assurance Company.
H. H. FUDGER, President The Robert Simpson Company, Limited.

H. B. WALKER, Manager Canadian Bank of Commerce at **Montreal.**

HON. SIR EDWARD KEMP, K.C.M.G., Minister of Overseas Military Forces of Canada; President Sheet Metal Products **Company** of Canada, Limited.

J. H. PLUMMER, Director Dominion Steel Corporation, Limited.

HON. F. H. PHIPPEN, K.C., General Counsel The Canadian Northern Railway Company.

H. J. FULLER, President Canadian Fairbanks-Morse Com**pany, Limited,** Montreal

F. W. MOLSON, Director The Molsons Bank, Montreal; Director Montreal City and District Savings Bank.

T. B. MACAULAY, President and Managing Director Sun Life Assurance Company of Canada, Montreal.

W. M. BIRKS, Vice-President Henry Birks & Sons, Limited, Montreal; Director The Molsons Bank.

E. M. SAUNDERS, Treasurer Canada Life Assurance Company.

SIR JOHN AIRD, General Manager Canadian Bank of Commerce.

J. W. WOODS, President Gordon, Mackay and Company, Limited.

J. HARRINGTON WALKER, President Hiram Walker & Sons, Limited, Walkerville.

THOMAS FINDLEY, President and General Manager Massey-Harris Company, Limited.

W. E. RUNDLE, General Manager National Trust Company, Limited.

The meeting then adjourned.

At a subsequent meeting of the Board of Directors, SIR JOSEPH **FLAVELLE, BART.,** was elected President and MESSRS. Z. A. LASH, K.C., E. R. WOOD and W. E. RUNDLE, Vice-Presidents, and the following were appointed members of the Advisory Board at Winnipeg: A. McT. CAMPBELL, Manager Canada Life Assurance Company, Winnipeg; SIR DOUGLAS CAMERON, K.C.M.G., Ex-Lieutenant-Governor Province of Manitoba; KENNETH MACKENZIE, Director Canada Life Assurance Company, Winnipeg; HON. GEORGE W. BROWN, Ex-Lieutenant-Governor Province of Saskatchewan; GEORGE W. ALLAN, M.P., of Messrs. Munson, Allan, Laird & Davis, Barristers, Winnipeg.

BANK CLEARINGS

The following are the bank clearings for the weeks of January 25th, 1917, and January 26th, 1918, respectively, with changes:—

	Week ending Jan. 26, '18.	Week ending Jan. 25, 17.		Changes.
Montreal	$ 73,551,387	$68,113,259	+	$ 5,438,128
Toronto	52,630,493	49,763,770	+	2,866,723
Winnipeg	34,423,308	31,634,502	+	2,788,806
Vancouver	8,527,783	6,696,433	+	1,831,350
Ottawa	5,866,855	5,001,964	+	864,891
Calgary	6,616,401	4,805,165	+	1,811,236
Hamilton	4,612,885	4,372,118	+	240,767
Quebec	3,600,826	3,517,772	+	83,054
Edmonton	3,146,087	2,343,254	+	802,833
Halifax	3,022,873	2,229,472	+	793,401
London	1,930,587	1,782,846	+	147,741
Regina	2,529,199	2,333,401	+	195,798
St. John	2,058,701	1,764,673	+	294,028
Victoria	1,577,683	1,501,619	+	76,064
Saskatoon	1,524,008	1,353,837	+	170,171
Moose Jaw	1,067,165	1,043,781	+	23,384
Brandon	557,693	449,036	+	108,657
Brantford	798,403	689,002	+	109,401
Fort William	925,504	620,099	+	305,405
Lethbridge	716,074	715,185	+	889
Medicine Hat	423,070	556,010	—	132,940
New Westminster	463,590	279,450	+	184,140
Peterboro	649,623	486,475	+	163,148
Sherbrooke	633,343	513,385	+	119,958
Kitchener	524,949	437,951	+	86,998
Total	$212,378,490	$193,004,459	+	$19,374,031

The Toronto bank clearings for the current week are $56,223,257, compared with $41,022,117 for the same week in 1917, and $50,641,615 in 1916.

The Toronto bank clearings for January are $259,474,999, compared with $256,464,674 for the same month in 1917, and $194,964,304 in January, 1916.

ANNUAL REPORT OF

The Oxford Permanent Loan and Savings Society

For the Year Ending 31st December, 1917

Your Directors have much pleasure in submitting the Report of the Society for 1917.

The total earnings were		$58,884.28
Out of which were paid:		
Interest on Deposits, Debentures, etc.	$22,609.65	
Management Expenses and War Taxes	7,859.83	
		$30,469.48
Leaving a balance of		$28,414 80
Which has been distributed as follows:—		
Two half-yearly dividends at seven per cent. per annum	$20,414.80	
Added to Reserve Fund	8,000.00	
		$28,414.80

We much regret the loss by death of Mr. James White, a member of our Board for many years, and much interested in its work. It will be necessary to elect a Successor for the balance of his term.

The Directors who retire this year are Lieut.-Colonel John White, Dr. W. T. Parke and Mr Stevenson Dunlop, all of whom are eligible for re-election.

Respectfully submitted,
H. J. FINKLE, President.

Woodstock, January 16th, 1918.

AUDITORS' REPORT TO SHAREHOLDERS.

We have compared the above Balance Sheet with the books and accounts at the Chief Office of The Dominion Bank, and the certified returns received from its Branches, and after checking the cash and verifying the securities at the Chief Office and certain of the principal Branches on December 31st, 1917, we certify that, in our opinion, such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs, according to the best of our information, the explanations given to us and as shown by the books of the Bank.

In addition to the examinations mentioned, the cash and securities at the Chief Office and certain of the principal Branches were checked and verified by us at another time during the year and found to be in accord with the books of the Bank.

All information and explanations required have been given to us and all transactions of the Bank which have come under our notice have, in our opinion, been within the powers of the Bank.

G. T. CLARKSON. } of Clarkson, Gordon &
R. J. DILWORTH. } Dilworth, C.A.

Toronto, January 18th, 1918.

PERSONAL NOTES

MESSRS. McDOUGALL & COWANS, the Montreal firm which has been operating a chain of branch offices across the continent, has withdrawn from Vancouver, and its business there has been taken over by Messrs. Burdick Brothers, and Brett of Vancouver. The Vancouver office was probably the smallest branch of the Montreal firm.

C. CAMBIE,
London Manager, Canadian Bank of Commerce; elected member, General Committee, British Overseas Banks' Association.

MR. C. CAMBIE, the London manager of the Canadian Bank of Commerce, has been elected a member of the general committee of the recently formed British Overseas Banks' Association, having as its object the general interest of the banks comprising the association. The other members of the general committee are as follow: Messrs. L. Couper, Bank of British West Africa; Chas. H. Hewett, Colonial Bank; R. J. Hose, Anglo-South American Bank; S. Rogers, Imperial Bank of Persia; F. Shipton, Standard Bank of South Africa; G. H. Soul, Anglo - Egyptian Bank; T. H. Whitehead, Chartered Bank of India, Australia, and China; A. Willis, National Bank of New Zealand; and A. C. Willis, Union Bank of Australia. Mr. T. H. Whitehead, manager of the Chartered Bank of India, has been appointed chairman, and Mr. Francis Shipton, hon. secretary and treasurer. Mr. Charles Cambie, the Canadian representative on the Committee, has been in the banking business all his business life. He entered the service of the Canadian Bank of Commerce as a junior in April, 1887. Eleven years later he was appointed accountant at the bank's branch in Vancouver, and three years afterwards at Victoria. He became assistant inspector of the head office in March, 1903, and assistant manager of the Toronto branch in October, 1906. In January, 1911, he was appointed manager of the Ottawa branch, and a few years later went to manage the London, England, branch, which position he still helds. Mr. Cambie is of Irish descent, his father being a native of Castletown, County Tipperary, and for some time commissioner of patents at Ottawa. Mr. Cambie was born and educated at Ottawa. In London he succeeded Mr. H. V. F. Jones, who went to the head office at Toronto to assume the assistant general managership of the bank. The London branch of the Bank of Commerce is naturally one of its most important offices, and the appointment to the management of that branch is deemed one of the honors of the bank's service.

MR. JOHN YOUNG PAYZANT, K.C., whose retirement from the presidency of the Bank of Nova Scotia has just been announced, was the oldest bank president in Canada. His next birthday is February 9, and the year of his birth 1837. He is a lawyer by profession and was called to the Bar of Nova Scotia in 1864. His legal career was a distinguished one and he numbered among his law partners some of the most leading members of the Bar of his native province. He was appointed vice-president of the Bank of Nova Scotia in 1897 and two years later became president. He is also one of the vice-presidents of the Eastern Trust Company and has been a director in a few other eastern enterprises.

MR. J. C. WAUGH (Winnipeg), Mr. Geo. R. Warwick (Toronto), and Mr. Anthony M. Rankin, M.P.P. (Collin's Bay, Ont.), have been elected to the directorate of the Excelsior Life Insurance Company, Toronto.

MR. THOMAS J. STEWART, M.P., of Hamilton, president of the Canadian Knitting Company, has been elected a director of the Quebec Railway, Light and Power Company. Mr. Stewart has been interested in the company for many years. He has been intimately interested also in electrical undertakings in Ontario, being a member of the Ontario Hydro Commission at Hamilton. Mr. Stewart has been a member of the House of Commons since 1900. Previously he was identified with municipal affairs in Hamilton, having served on the council for 27 years. He was also mayor of the city in 1907-1908.

DOMINION TO MAKE LOANS TO PROVINCES

Money at the rate of six per cent. for a term not exceeding five years and repayable at any time within that period will be furnished Alberta province by the Dominion finance department as a means of meeting the protests of the different governments in regard to the recent order-in-council regarding provincial securities, according to an Edmonton dispatch. This announcement was made on Tuesday by Provincial Treasurer Hon. C. R. Mitchell. Mr. Mitchell said that Sir Thomas White, minister of finance, has arranged to advance money to the various provinces in a limited aggregate amount, but sufficient to meet the essential and pressing capital expenditures of the provinces requiring such assistance.

This action was credited in *The Monetary Times* two weeks ago.

NATIONAL TRUST COMPANY

A substantial increase in the net earnings, a large addition to the assets under the company's administration, a strong liquid position, and a creditable financial position generally are the outstanding features of the statement of the National Trust Company for the past year. The company earned 16¾ per cent. upon its paid-up capital, or 8⅜ per cent. upon its combined capital and reserve. The net earnings for the year were $251,333, an increase of $15,079 over the preceding year. The growing tendency of mortgagors, especially farmers, to pay off their mortgage indebtedness, while good for the country generally, has the immediate effect of reducing the earnings of trust companies and all other mortgage loan institutions on their mortgage investments. They cannot reinvest funds at as favorable interest rates. Moreover, as the demand for mortgage loans has decreased since the war, the repayments on mortgages have been largely reinvested in government and municipal securities. The company's balance sheet shows a considerable increase in holdings of securities of this character. This class of security, while yielding a much higher rate than was obtainable previous to the war on similar securities, does not yield as high a rate as the mortgages paid off. The net result is a reduction in the average rate of interest obtainable on the total invested funds. The National Trust Company is fortunate, however, in that it has been able not only to overtake the loss of interest referred to, but to increase its earnings because of the remuneration received upon its greatly increased volume of estates and trust business.

The assets under administration now amount to $76,722,635, an increase during the past year of $7,525,580. The figures speak for the public confidence the company enjoys. In addition to administering the assets shown in the balance sheet, there are many services performed by the company, such, for example, as that of trustee under mortgage for bond issues, transfer agent and registrar for shares of outside companies, custodian of property, deeds and securities for safekeeping, and escrow transactions of almost innumerable character.

The net earnings, together with $96,314 brought forward from the previous year's profit and loss account, enabled the directors to pay dividends amounting to $150,000, or at the rate of 10 per cent. on the capital stock, or 5 per cent. on the combined capital and reserve; to write $50,000 off the company's office premises account; to pay $15,250 in subscriptions to Patriotic, Red Cross and other funds; to provide $10,000 to meet the Dominion government income war tax, which, though, for the year 1917 is not yet payable, and to carry forward $122,398 into open profit and loss account.

COMPANY WILL WRITE SUB-STANDARD BUSINESS

The Empire Life Insurance Company of Canada has obtained a Dominion charter with a view to paying special attention to the insuring of sub-standard or under-average lives. The company is capitalized at $1,000,000 in 10,000 shares of a par value of $100 each. An offering is now being made of 3,000 shares at a premium of 30 per cent. with 30 per cent. paid on capital account, making a total of $60 a share. The board of directors is as follows:—C. W. Clark, M.D., Toronto; Douglas S. Murray, president Thos. Claxton Company, Limited, Toronto; Jno. S. Hart, M.D., Toronto; F. D. Law, managing director Oak Tire & Rubber Company, Toronto; G. B. Wickes, managing director, Toronto.

Sub-Standard Insurance.

With the same object that the Empire Life Insurance Company is founded in the Dominion, the Clerical, Medical and General Life Assurance Society of London, England, was established in the year 1824. Their last report tells us that the company was the first to grant policies on under-average lives—and still does so with conspicuous success and advantage to its assured. The report furnishes ample testimony as to the correctness of their statement and of the soundness of under-average insurance. During a time of war, the company made the largest distribution of divisible profits in its history, after valuing for the sixth quinquennium in succession at 2½ per cent. throughout.

A large United States company after studying the history of 25,000 of these lives, took the ground that every person of good moral character, not actually ill, is insurable. This company's chief medical officer, Oscar H. Rogers, M.D., has stated that over a ten-year period his company granted policies to over 100,000 of such lives, covering insurance for $228,000,000 with satisfactory results from both a financial and humanitarian standpoint.

Business Available in Dominion.

There are no published returns as to the total amount of business declined in the Dominion. Mr. Wickes, the manager of the Empire Life Insurance Company of Canada, however, tells *The Monetary Times* that he has spent considerable time in obtaining approximate data as to the amount of these declinatures. In a memorandum regarding his company, Mr. A. D. Watson, the head actuary for the Dominion insurance department, makes the following statement: "Of those who do apply for insurance about 15 per cent. are sub-standard, of whom probably about half are rejected outright." In a statement to *The Monetary Times*, Mr. Wickes said: "For many years I have asked life insurance men in all positions as to what proportion of their business is generally turned down. The answer has come that 10 per cent. would be a conservative estimate of declinatures. This is the expressed opinion of practical insurance agents, whole-time agents, part-time agents, provincial managers, agency superintendents, and men with whom he has come in touch from coast to coast. As $700,000,000 of business has been issued during the past three years in Canada, the volume of declined business for that period at a conservative estimate should amount to at least $50,000,000."

One-Half Business Declined.

Mr. Oscar H. Rogers, M.D., referred to above, has said: "A company which carries on a sub-standard business on broad lines is able to assume risks on at least 50 per cent. of those cases which other companies decline. The business is economical. Medical examinations must be paid for whether the business is accepted or rejected. As clerical force and an adequate plant must be maintained whether risks are assumed or declined, by reducing the percentage of rejected business an economy is effected in proportion to such reduction. From the standpoint of the company alone, sub-standard business is therefore economical."

Room for Office Here.

The Empire Life Insurance Company thinks it opportune for a similar office to open this class of business in the Dominion. They point out that there are many persons who do not come forward for insurance knowing themselves to be below the standard required; that a large number of our returned soldiers must unfortunately come within this class, and that the company prepared to deal with such cases on a liberal basis should meet with support, and should have a good future before them, if the business is skilfully managed. The management expect that the cost of obtaining and maintaining the business will be low because sub-standard business can be secured at low expense, which is a matter of great importance to a young company. The general manager is Mr. G. B. Wickes, for some four years with the Royal Insurance Company of this country, organizing the agents of their life department both in the east and west. He has made special study for some years of under-average business.

NEW INCORPORATIONS

Canada Metal Company Obtains Charter, With Authorized Capital of $1,000,000

The largest companies incorporated during the past week were:—

Monarch Tractors, Limited, Toronto, Ont., $1,000,000; the Canada Metal Company, Limited, $1,000,000.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are provisional directors:—

Victoria, B.C.—John Meston and Company, Limited, $10,000.

Coleville, Sask.—Coleville Community Hall, Limited, $3,000.

St. Brieux, Sask.—Farmers' St. Brieux Elevator, Limited, $10,000.

Newdale, Man.—Newdale Livery Company, Limited, $5,000; C. A. Congdon, R. H. Dennison, A. Waddell.

Oshawa, Ont.—Thornton Rubber Company, Limited, $50,000; J. Thornton, J. W. Weldon, S. L. D. Harris.

Municipality of Clanwilliam, Man.—The Baird Ranching Company, Limited, $40,000; S. G. Baird, E. K. Baird, W. J. Cooper.

Saint John, N.B.—McLaughlin Real Estate Company, Limited, $48,000; H. S. McLaughlin, R. McLaughlin, D. McLaughlin.

Vancouver, B.C.—Ladyware, Limited, $50,000; the Fleming Coal Company, Limited, $10,000; H. M. K. Timber Company, Limited, $10,000.

Saskatoon, Sask.—Norman Cox, Limited, $50,000; Northern Saskatchewan Motor Sales Company, Limited, $100,000; Glenside Ranching Company, Limited, $25,000

Moose Jaw, Sask.—Prairie Rose Brewery, Limited, $25,000; the Prairie Motor Sales Company, Limited, $60,000; Cassidy's, Limited, $20,000; King Ventilating Company, Limited, $25,000.

Montreal, Que.—The Welland Hotel Company, Limited, $20,000; F. P. Bais, T. B. Gould, J Bruneau. La Rosa, Limited, $20,000; M. Klein, F. Perron, A. Lafontaine. Suburban Water Company, Limited, $5,000; J. W. Blair, F. J. Laverty, C. A. Hale. Sessenwein Brothers, Limited, $35,000; P. Bercovitch, E. Lafontaine, N. Gordon. The Walter Paul, Limited, $50,000; W. Paul, W. H. Paul, R. H. Paul.

Toronto, Ont.—Ontario and Pittsburgh Coal Company, Limited, $10,000; W. Gilchrist, J. Stewart, H. J. Stuart. Gas Processes, Limited, $50,000; W. A. Case, J. Broadbent, T. Atwood. The Canada Metal Company, Limited, $1,000,000; C. Swabey, M. C. McLean, G. H. Anderson. Monarch Tractors, Limited, $1,000,000; E. J. Swift, A. J. Gannon, E. G. Gore. Predigest Food Company, Limited, $100,000; J. M. Bullen, G. K. Steele, W. Osborne. The international Securities Investment Corporation, Limited, $2,000,000; G. C. Loveys, J. B. Taylor, G. E. Atwood.

Winnipeg, Man.—F. W. Pace Agency, Limited, $25,000; W. P. Fillmore, F. W. Pace, W. D. Watson. Central Tools and Forgings, Limited, $20,000; J. Auld, F. G. Warburton, K. C. Murray. The Gold North West Mining Company, Limited, $50,000; S. A. Ripstein, H. M. Ripstein, C. Sjogren. The Manitoba Steel and Iron Company, Limited, $500,000; T. R. Deacon, H. B. Lyall, R. D. Guy. The Sullivan Hall Shipping Company, Limited, $20,000; W. W. Hall, K. B. Hall, O. G. McNabb. Broders, Limited, $40,000; M. G. Broder, E. F. Broder, J. Donovan. The Gaiety Theatre Company, Limited, $2,000; J. A. Schuberg, W. P. Dewees, S. J. Coffland. Rosser Farms, Limited, $20,000; J. F. Campbell, H. Mackenzie, A. Graham. Bon Accord Clothing Company, Limited, $20,000; C. Schachter, R. Schachter, M. Schachter.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Brandon, Man.—January 23—Block of four buildings, containing the Brandon National Bank, offices of the Western Union Telegraph Company and several other stores, was destroyed. Estimated loss, $200,000.

Brantford, Ont.—January 30—Ogilvie, Lochead departmental store damaged. Caused by gas left burning. Estimated loss, $6,000.

Buckingham, Que.—January 22—Hotel of Mr. Wm Campbell was destroyed. Total insurance of $6,450 is divided among the following companies: Employers, $2,700; Sun, $1,700; Union of Paris, $1,250; North America, $800. Total, $6,450.

Cabono, Que.—January 20—The Donald Fraser and Son's lumber mill was destroyed, incurring a loss of $20,000. The total insurance of $92,700 is divided among the following companies: Royal Exchange, $21,750; Phœnix of London, $21,750; Liverpool and London and Globe, $6,050; North British and Mercantile, $12,100; London and Lancashire, $3,025; Home, $3,025; Lumbermen's Underwriters, $25,000.

Edmonton, Alta.—January 26—Sandison Block was destroyed. Estimated loss, $25,000.

Glace Bay, N.S.—January 22—House of Walter Young was destroyed.

Guelph, Ont.—January 27—Dry goods establishment of G. B. Ryan and Company was destroyed. Estimated loss, $225,000.

January 30—Warehouse of the Light and Heat Commission damaged. Loss, $3,500.

Halifax, N.S.—January 29—Freight shed at the south steamship termination was damaged.

Hespeler, Ont.—January 23—The new Hespeler Roman Catholic church was destroyed. Estimated loss, $13,000.

Joliette, Que.—January 25—St. Viateur Academy was destroyed. Estimated loss, $100,000.

Parry Sound, Ont.—January 28—Boarding-house, owned by Bert Ullman, was destroyed.

Peterboro', Ont.—January 26—One-half of the business block on George Street was destroyed, including the retail store of the Matthews-Blackwell Company, the Dominion Bank on the north, the Royal Motion Picture Theatre on the south, and the Neill Shoe Store. Included in the Dominion Bank building is the Confederation Life; Henry Rush, insurance; Bradburns, Limited, real estate; Dr. W. J. Preston, a dentist, and the Masonic Hall. Estimated loss, $500,000.

Picton, Ont.—January 28—Picton Hotel and several frame houses were destroyed. Estimated loss, $10,000.

St. Laurent, Que.—January 25—House of T. Fritz was destroyed. Caused by overheated stove.

St. Lambert, Que.—January 29—Building occupied by the Royal Bank agency, the Metropolitan Life Assurance Company agency, three merchants and three families was destroyed. Estimated loss, $20,000.

Three Rivers, Que.—January 30—Chair factory of Messrs. C. P. Gelinas and Frere's was damaged. Studio of Mr. P. F. Pinsonault and adjoining were destroyed.

Trenton, N.S.—January 29—Scotia steel plant damaged. Caused by explosion of acetylene tank Estimated loss, $4,000.

Toronto, Ont.—January 25—West wing of Spadina Military Hospital was destroyed.

January 28—Bookstore of John Britnell and Son was damaged. Estimated damage to contents, $8,000; to building, $1,000.

Woodstock, Ont.—January 29—Home of Mrs. Isaac Clifford was destroyed. Estimated loss, $2,000.

DOMINION PERMANENT CLOSES DOORS

Loan Company Assigns for Benefit of Creditors—President Makes Statement

The Dominion Permanent Loan Company, Toronto, closed its doors last night, assigning to Mr. G. T. Clarkson for the benefit of creditors. The following statement was handed to the press this morning by Mr. F. McPhillips, president of the company:—

"The directors of the company, after having made a thorough examination of the company's assets, find they are of such a nature that they cannot be realized upon at present without serious loss, and as there are obligations of the company maturing this month which it cannot meet, it was felt advisable, under the circumstances, to make an assignment to Mr. G. T. Clarkson, who is now making an investigation and preparing a statement of affairs. Mr. Clarkson will at the earliest possible moment submit a statement to the shareholders and creditors."

Capital Authorized and Subscribed.

The late Hon. J. R. Stratton, of Peterborough, was formerly president of the company, and Mr. D. W. Karn, Toronto, vice-president. The total authorized capital was $10,000,000, and the amount subscribed, according to the government returns for 1915, was $1,408,400. In the company's financial statement for 1916, the liability to shareholders on capital stock was given as $1,205,904. It is understood that the amount of capital issued at the present time is $1,410,700.

The company's head office is in Toronto. Hon. T. W. McGarry, provincial treasurer of Ontario, became a director of the company a little over a year ago, when he was elected vice-president. When, in October last, the Ontario government established its farm loan board, Mr. McGarry resigned as vice-president and director of the company, the business of which naturally conflicted with the operations of the government's new loaning department.

Officers and Directors.

The following are the officers and directors of the company: Mr. F. McPhillips, president; Messrs. W. D. Jamieson, Durham; T. H. Johnson, Winnipeg; Hon. G. H. Cowan, K.C., Vancouver; J. B. O'Brien, Renfrew; F. M. Holland, managing director. Mr. McPhillips is associated with the publication of a financial and insurance journal, The Insurance and Financial Review. Mr. Holland has been confined to his house for the past two months on account of illness.

Mr. McPhillips, in a statement to *The Monetary Times*, said that he was of the opinion that the funds of depositors and debenture holders "would ultimately be all right." He added that nothing definite could be stated regarding this or other matters until Mr. Clarkson had made his report.

Last Year's Statement.

According to the company's statement of accounts for the year ended December 31st, 1916, after paying dividends of $71,616 and writing off office furniture and fixtures to the extent of $548, the company had left a balance of $98,337 to the credit of profit and loss account. The balance sheet showed assets amounting to $4,476,386 and divided as follow: Mortgages and other securities, $4,310,506; real estate, $50,776; office fixtures and furniture, $4,040; sundry accounts, $2,597; and cash on deposit and on hand, $107,565. The deposits and accrued interest totalled $224,073 and debentures and accrued interest, $2,399,248. There was a surplus of assets over liabilities of $1,852,251. The liabilities to the shareholders were as follows: On capital stock, $1,205,904; contingent fund, $5,964; reserve fund, $508,000; unclaimed dividends, $45; dividends payable January 3rd, 1917, $34,000; balance of profit and loss, $98,337.

Mr. H. B. Thomson, who for ten years represented the city of Victoria in the local legislature, took a leading part in promoting the British Columbia shipbuilding bill and, as a member of the shipbuilding commission, directed the enterprise under which the first wooden ships were built in British Columbia, has been appointed food controller. He has been deputy food controller since September. In this capacity he has been in constant intercourse with Washington and has rendered valuable service in co-ordinating the work of Food Controller Hoover with that of the food controller in Canada

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Abitibi Power and Paper Company.—Immediately following the annual general meeting, which will be held on February 11th, a special general meeting will be held for the purpose of considering and, if deemed advisable, approving by-law 19, cancelling the preference and privileges of unissued $1,000,000 of the capital stock of the company.

Southern Canada Power Company.—The company's report for December showed an increase of $2,668 in net earnings over those of the corresponding period of 1916, although operating expenses and amounts expended for purchasing power increased $6,666. Gross for the month amounted to $39,281, and net to $17,353. For the quarter ended with December gross amounted to $112,595, and the net to $49,791, an increase of $4,568.

American Cyanamid Company.—Though no definite announcement has been made as yet, it is likely that Canadian stockholders of the American Cyanamid Company will be represented at the special meeting to be held February 5th at Portland, Maine. The proposal which will be dealt with at the meeting is the distribution of a portion of the company's profits for last year to its officers and managers in recognition of their services and as compensation in addition to their monthly salary.

Wabasso Cotton Company.—The formalities in connection with the listing of Wabasso Cotton Company's securities on the Montreal Stock Exchange are completed and official quotations will be granted toward the end of the current week. The securities to be listed are $1,750,000 common and $1,000,000 6 per cent. bonds. In the outside market the former is quoted around 21 to 25 and the latter at around 81 to 85. In its last fiscal year the company earned a surplus of $61,321, equal to about 3.5 per cent. on its common stock capital.

Winnipeg Electric Railway Company.—The net earnings of the company, and its subsidiaries, to the end of November were $748,976. The decrease in net from the previous year was $327,782. At the present rate the decrease in net for the year promises to be considerable. In the calendar year 1916 the total net earnings were $1,398,000. Of this, interest on bonds and debentures took $644,000. The company began 1917 with a surplus of $1,128,000, which will probably be reduced this year.

Crown Reserve Mining Company.—The company's financial statement for the year ended December 31, and which was presented to shareholders at the annual meeting recently, showed an increase in ore production from $191,822 to $265,155. After paying mining and all other expenses, including development, depreciation, etc., amounting to $182,582, the profits were $82,573, against $2,973 in 1916. With the balance of $770,533 carried forward from 1916, the profit and loss account shows a total of $930,079, and after paying head office superintendence, taxes, depreciation, prospecting and exploration, totalling $148,314, the surplus was $781,765. Last year's surplus was $770,533.

Canadian Car and Foundry Company.—The company has closed a contract for building steel ships at Fort William for the United States to the value of $10,500,000. This will involve the employment of 1,000 men, in addition to the 1,500 men who will be working on the company's railway car contracts. Tenders are now called, and will be let to-morrow for the construction of a new building, 220 by 200 feet, in which the boats will be built, and a marine railway and slip will also be built for launching the boats as they come from the works. The whole of the material for the contract has been arranged for with the United States government, and shipbuilding will commence in May. This is the second shipbuilding plant in Fort William, the Great Lakes Dredging Company now being engaged on the construction of wooded freight steamers.

La Rose Consolidated Mines Company.—The preceden established by the Nipissing Mines Company and later followed by the Kerr Mining Company in eliminating doubl taxation through the dissolution of United States holding companies, has found another disciple in La Rose Consolidate Mines Company, a $7,500,000 corporation with a Maine charter. La Rose Mines, Limited, heretofore subsidiary of an operating property for La Rose Consolidated Mines Company will assume all functions of the latter in addition to its own thereby being subservient only to Canadian laws and paying but one set of taxes. The Canadian company's capital wil be increased to permit of a share for share exchange for stoc of the United States corporation; otherwise stockholders wi in no way be affected by the transfer.

Duluth-Superior Traction Company.—At the annual meeting in New Haven, the report for the year ended Decembe 31 last was presented. The comparative statement of earnings is as follows:—

	1917.	1916.
Total operating revenue	$1,621,952	$1,407,511
Other income	22,434	16,917
Total income	$1,644,387	$1,424,429
Operating expenses and taxes	1,181,987	984,086
Gross income	$ 462,408	$ 440,342
Interest, etc.	176,611	172,341
Net income	$ 285,797	$ 268,001

The gross operating revenue for the year shows an increase of $319,958.06, or 15.44 per cent. over the year 1916 but the net income only shows an increase of $17,795.06, o 6.64 per cent. over the year 1916. Net income is equivalen to 6.45 per cent. on the common stock, as compared with a earning of 5.94 per cent. in the previous year. A new shipbuilding enterprise was established at New Duluth durin the year past, employing about 1,000 men, and if the industria plants at the head of the lakes continue to give employmen to as many men as during the last year, it is believed tha the company's gross revenue will be fully maintained durin 1918.

Porcupine Crown Mines, Limited.—The company's financial statement, presented to the shareholders at the annua meeting recently, showed a marked decline in productio the value of the ore produced during the year being $364,703, as compared with $575,604 for 1916. After paying fo mining, milling, allowing for depreciation, taxes, etc., th mining profits were $109,421, against $270,430 in 1916. Mining and operating account, compared with 1916 as follows:—

	1917.	1916.
Bullion production	$364,703	$575.604
Mining, milling depreciation taxes, etc.	255,281	304,174
	$109,421	$270,430

Profit and loss account offers the following comparison:—

	1917.	1916.
Balance, January 1	$276,989	$269,977
Adjustments	138	2,536
	$277,128	$267,444
Profit on operations	109,421	270.430
Interest	5,199	4,574
	$391.749	$542,445
Dividends	120,000	240,000
Bonus to employees	......	4,563
Taxes	6,543	......
	$265.206	$207,882

Twin City Rapid Transit Company.—In the annual report it is shown that the gross income for the year was slightly below that of the previous year. Net earnings due to increased operating expenses, as is the case of most utility companies, have shown a large decrease. The amount earned on the common, after payment of all charges and preferred dividend, was $6.03 per share, against $9.22 in 1916, and $6.83 in 1915. The statement of income account for the year, with comparison, is as follows:—

	1917.	1916.
Gross revenue	$10,181,866	$10,188,054
Net after tax	2,542,150	3,225,313
Other income	25,846	25,425
Total income	$ 2,567,996	$ 3,251,738
Interest, etc.	1,029,946	1,014,190
Balance	$ 1,538,050	$ 2,237,548
Preferred dividends	210,000	210,000
Common dividends	1,320,000	1,320,000
Surplus	$ 8,050	$ 707,548

The consolidated balance sheet as of December 31, 1917, compares as follows:—

	1917.	1916.
Assets:		
Road and equipment	$52,436,789	$51,550,776
Miscellaneous properties ..	1,124,922	1,124,922
Investments	164,937	22,500
Cash	560,358	1,165,140
Bills and accounts receivable	100,635	71,991
Material and supplies	983,577	750,817
Total	$55,379,717	$54,700,887
Liabilities:		
Preferred stock	3,000,000	3,000,000
Common stock	22,000,000	22,000,000
Funded debt	20,263,000	20,263,000
Accounts and wages payable	274,208	74,462
Accrued interest	347,032	347,032
Taxes	905,696	730,779
Reserves	7,287,883	6,903,247
Surplus	1,285,805	1,368,763
Total	$55,379,717	$54,700,887

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

THE STORY OF A YOUNG FINANCIAL MAN'S SUCCESS.—A financial man, thirty-three years of age, came to our office four years ago to take up a new line of business—a line against which he had been prejudiced, but which he knew carried great rewards for the successful. His average commissions this year will be over $5,000.00, and he has built up a future income of over $3,000.00 a year on business already written. We are enlarging our organization to prepare for an enormous expansion of business during the next few years. We have positions for two good men with successful records. This offer will be open during the next week. Only applicants of unquestioned integrity and with the highest references will be considered. W. A. Peace, Manager Toronto Branch, Imperial Life Assurance Company, 20 Victoria Street, Toronto.

CHIEF CLERK.—Wanted by a British Fire Insurance Office a competent young gentleman for the position of Chief Clerk. Must be capable of taking charge of office. Apply giving full particulars as to experience, length of service and salary expected. P.O Box 1386, Montreal.

WANTED.—Fire Insurance Inspector for Ontario Field; headquarters, Toronto. Must be capable draftsman and familiar with schedule rating. Apply stating age, whether married or subject to military draft, also state experience and salary expected. Applications will be treated in strictest confidence. Box 143, *The Monetary Times*, Toronto.

Monarch Life Assurance Co.

HEAD OFFICE, WINNIPEG.

SUMMARY OF 1917 RESULTS.

George P. Awrey—Ontario Field Secretary, 408 Royal Bank Bldg., Toronto.

R. H. Brydon—District Manager (Guelph).

W. B. Fairley—District Manager (Hamilton).

RELIABLE AGENTS WANTED

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

At a recent meeting of the mayors of the four Alberta cities the following decisions were unanimously reached:—

(1) A tax enforcement law that will be compulsory, act quickly, and be consummated in all its detail within eighteen months from the year the taxes were unpaid. That is, if 1917 taxes were not paid at the end of 1917, a sale could be held and the transfer of property obtained by August of 1919.

(2) The limitation of the moratorium to the protection of real soldiers.

(3) Land Titles Act amendment that would make a transfer impossible without a receipt for taxes.

(4) A uniform Assessment Act.

(5) A readjustment between the federal and provincial governments on school lands.

Commenting upon the school lands matter, Mr. W. D. L. Hardie, mayor of Lethbridge, in a letter to *The Monetary Times*, says: "We should get more help towards running our schools from this source." Mr. Hardie states that the methods which might be used to reduce the burden of taxes were discussed at the mayors' conference, but no definite conclusions were reached. "The lawyers," he adds, "found no end of difficulties in the way of most proposals, so they were left at that for the time being."

The following table, compiled by *The Monetary Times*, shows the volume of bank loans to municipalities since January, 1914, to December, 1917:—

	1914.	1915.	1916.	1917.
January	$29,301,620	$35,952,805	$32,015,371	$24,487,272
February	30,372,854	38,437,903	35,149,915	26,121,324
March	31,890,843	41,227,449	38,649,462	29,877,911
April	30,168,812	43,031,360	44,371,050	35,931,996
May	33,689,577	43,948,436	43,924,036	39,790,191
June	37,260,571	46,889,816	46,773,032	42,757,673
July	36,372,334	44,029,446	42,385,096	43,989,207
August	39,664,534	46,020,730	39,882,811	43,940,176
September	44,338,873	43,928,331	38,708,745	42,721,563
October , ...	47,316,076	45,682,230	37,613,530	41,204,781
November	44,706,055	41,064,550	32,945,963	36,459,598
December	38,256,947	30,878,028	24,056,797	36,353,039

Owen Sound, Ont.—Legislation is sought for authority to guarantee the bonds of the King Shoe Company up to $30,000, and also to allow taxation exemptions, except in respect of school and local improvement imposts.

Windsor, Ont.—The city has sold issues aggregating $355,000 to the Dominion Securities Corporation and Messrs. W. A. Mackenzie and Company, Toronto. The accommodation cost the city 6¾ per cent. The bonds are of varying maturities. The city will borrow $100,000 later.

Calgary, Alta.—The city shows signs of drawing away from the single tax principle. At present buildings are taxed on only 25 per cent. of their assessed value. The motion is now before the legislative committee to increase taxable proportion to 50 per cent. It is predicted that before long they will be taxed at the total assessed value.

Toronto, Ont.—Two items of legislation are to be sought by the city at the forthcoming session of the Ontario legislature, the first being to authorize a civic investment of $1,000,000 in the bonds of the Harbor Board, and the other to legalize the issuance of debentures to cover the cost of arbitration proceedings in connection with the Teraulay Street extension scheme, temporarily postponed.

British Columbia.—The following certificates with date, have been issued by the municipal department of the province of British Columbia:—

Victoria.—By-law No. 1900, local improvement, street widening, $64,628.05, 50-years, interest 4½ per cent., payable half-yearly, January 7th, 1918.

Victoria.—By-law No. 1952, local improvement, street widening, $70,208.50, 50-years, interest 4½ per cent., payable half-yearly, January 7th, 1918.

Victoria.—Thirty-five local improvement by-laws, covering paving, sidewalks and boulevards, and Consolidation By-law No. 1977A, consolidating the amounts authorized by the above thirty-five by-laws into one sum of $282,884.18, maturing 1 to 10 years, interest 5 per cent., payable half-yearly, January 14th, 1918, and debentures thereunder.

Montreal, Que.—In connection with Sir Lomer Gouin's proposal for a commission to be the administrative body of the city of Montreal, Quebec despatches state that Mr. Charles Arnoldi, city treasurer, will resign shortly, and will be replaced by an English-speaking citizen, prominent in banking circles, and connected at present with a large bank in Montreal. Of the two members of the commission to be appointed by the lieutenant-governor-in-council, one will be English speaking. Consequently, out of five members of the commission, three will be French-speaking, viz., Mr. Charles Laurendeau, chief city attorney; Mr. J. Pelletier, comptroller and auditor, and one of the two to be appointed by the lieutenant-governor-in-council, while the two English members will be the one who will replace Mr. Arnoldi as city treasurer, and consequently as commissioner, and the one to be appointe by the lieutenant-governor-in-council.

Winnipeg, Man.—An offering of $2,000,000 Greater Winnipeg Water District 5 per cent. gold bonds is being made. These bonds are a direct obligation of the Greater Winnipeg Water District, a corporation constituted by special act o the Manitoba legislature, with powers to construct and operat a waterworks system to serve Greater Winnipeg. The distric comprises the city of Winnipeg and its more importan suburbs, with a total area of 91.79 square miles and a combined population of approximately 220,000. The bonds ar a direct charge on all the taxable land within the district the assessed valuation being in excess of $226,000,000. Th taxes levied by the district rank equally with all taxes raise for other municipal purposes, and are collected at the sam time and in the same manner.

The bonds are additionally secured by the hypothecatio with the Bank of Montreal of $2,500,000 (£513,698) long-term sinking fund securities of the district, which are a first charg on the entire waterworks system and properties of the district. The proceeds from the sale of these securities mus be held to retire this issue at maturity. The total outstandin debenture debt of the district (including the present issue is $1,283,112 long-term debenture stock, listed on the Londo Stock Exchange, and $9,500,000 short-term debentures, temporarily issued against long-dated collateral as above referred to. This issue is made with the approval of the Priorit Board of the Department of Finance, Ottawa. The bonds ar being offered at 92.68 and interest, yielding 6¾ per cent.

The Greater Winnipeg Water District will issue $6,00 000, 5 per cent. 5-year, to complete projects now under way $4,000,000 will be borrowed this year and $2,000,000 in 191 Messrs. Wood, Gundy and Company, of Toronto, have offere to take up $2,000,000 of the bonds on a 7⅝ per cent. basis

BANK BRANCHES OPENED AND CLOSED

The following is a list of bank branches opened an closed during December:—

Branches Opened—Six.

Charlestown, Nevis, B.W.I....	Royal Bank of Canada.
Florida, Cuba	Royal Bank of Canada.

LIFE INSURANCE LEGISLATION

Differences in Provincial Legislation Affecting Life Insurance Contracts in Canada

BY WILLIAM B. TAYLOR, B.A., LL.B.

(Fourth Article.)

Bonus or Surplus.

All the provinces except Manitoba provide that the insured may request the bonus or surplus payable in connection with the policy be paid to him or applied as he directs, notwithstanding the appointment of an ordinary or a preferred beneficiary. In Newfoundland, the insured may require the bonus or surplus to be paid to him or applied as he directs.

Child's Insurance.

The total amount of insurance that can be carried on the life of a child is limited in the provinces of Ontario, Saskatchewan, Alberta and Quebec, and the amount is limited to $32 if the child dies under the age of two years, and gradually increases up to $260, which is the limit if the child dies under the age of 10 years. A pecuniary interest, however, is not affected by these limitations, or where the premiums paid are returned with interest on the death of the child. Amendment, April 12, 1917.

Where insurance on children under 10 is undertaken in these provinces the policy must contain the sections of the act specially referring thereto or with the consent of the superintendent of insurance, print or stamp a notice that the insurance is subject to the restrictions prescribed by the Insurance Act.

Manitoba, British Columbia, New Brunswick, Nova Scotia and Prince Edward Island have no special provision as the other provinces.

The provinces of Ontario, Saskatchewan and Alberta allow a minor of 15 years or upwards to effect and deal with insurance practically in the same way as an adult, provided the insurance is effected on his own life for his own benefit or the benefit of a preferred beneficiary or of a father, brother or sister.

In Alberta the class of beneficiary is extended in this case to a grandparent.

In the case of endowment insurance on the life of a child under 10 years of age the insurer shall not pay an amount exceeding the total premiums paid with interest thereon at 3½% per annum compounded yearly.

We find, however, no special provision passed in the provinces of Manitoba, British Columbia, New Brunswick, Nova Scotia and Prince Edward Island. In the colony of Newfoundland there is no reference to this class of insurance.

Error in Age.

In the provinces of Ontario, Saskatchewan, New Brunswick, Nova Scotia and Prince Edward Island, we find the legislation provides for the adjustment of the amount of the policy in the proportion that the premium paid bears to the premium that should have been paid. The same provision applies to the colony of Newfoundland.

In the latter three provinces no table of rates is referred to but we find in Ontario and Saskatchewan a reference is made to net annual premium rates.

No provisions for adjustment of the amount of the policy are found in legislation of the provinces of Manitoba, Alberta, British Columbia and Quebec.

Payments to Infants.

In Ontario a minor 15 years or upwards may give a valid discharge for any payment in connection with the policy on his life payable to him.

The share of an infant in an insurance policy may be paid to a person expressly authorized by the insured to receive the money by instrument in writing or by the contract. If there is no person so authorized to receive the infant's share or the share of a lunatic or person whose place of abode is unknown, the insurer is obliged to pay such share into the supreme court of the province and notify the official guardian.

In Manitoba the money payable to an infant, if no trustee is appointed, may be paid to the executor of the estate of the insured and becomes the trustee thereof for the infant. If there is no executor, payment should be made to a guardian or curator.

Saskatchewan—Where money is payable to an infant, lunatic, or person whose abode is unknown, it shall be the duty of the insurer within 30 days after notice of the insured's death to notify the official guardian, and in case of a lunatic, notify the guardian of the lunatic or the person with whom he or she resides, otherwise the insurer shall be liable to a fine of $100.

If no one is specially authorized to receive the fund, it may be paid into the supreme court to the credit of the infant, lunatic or person entitled.

Alberta—Where no trustee is named to receive the share of an infant the supreme court may appoint a trust company upon application of the infant or a parent or guardian, and payment can be made to the trustee.

If no such appointment is made within two months from admission of claim, the insurer may obtain an order from the supreme court for payment of the share of the infant into court.

In the provinces of British Columbia, Quebec, New Brunswick, Nova Scotia and Prince Edward Island, payment of the share of the infant may be made to the executor of the insured's estate and in the last three provinces, if there is no executor, the supreme court may appoint a guardian or trustee.

If the insured died intestate in Quebec a tutor should be appointed to receive the infant's share. In Newfoundland, if no trustee is named in the contract to receive the shares to which infants are entitled, their shares may be paid the executor of insured's last will, or to a guardian of the infant appointed by the supreme court or judge thereof or to the guardian of the infants appointed by the supreme court or a judge thereof, or a trustee appointed by the supreme court or judge thereof on application. If the infant's share is not applied for within two months, the insurer may apply to the supreme court for payment into court.

Limitation of Action.

In the provinces of Ontario and Saskatchewan action must be brought against the insurer under the policy within one year next after the cause of action arose, and not afterwards except in the case of disappearance, and where death is presumed from disappearance, action may be brought within one year and six months following the period of seven years from the date on which the insured had last been heard of.

In the province of Quebec action may be brought against the company on the claim within one year. A further period of six months may be granted upon a petition by leave of a judge of the supreme court.

There is no special provision in the legislation of Manitoba, Alberta, British Columbia, New Brunswick, Nova Scotia and Prince Edward Island.

There is no special provision in Newfoundland.

Payment of Claim.

Sixty days must elapse after the proofs of claim are filed with the insurer before action can be brought in the provinces of Ontario, Manitoba, Saskatchewan, Alberta, British Columbia and Quebec, and 30 days in the provinces of New Brunswick, Nova Scotia and Prince Edward Island. In Newfoundland claims are payable 30 days after proof.

Premium.

Thirty days' grace for payment of the premium is allowed in the provinces of Ontario, Saskatchewan, Quebec, New Brunswick, Nova Scotia and Prince Edward Island Newfoundland, 30 days' grace. We find no express provision in the legislation of the other provinces.

Suicide.

In the provinces of Ontario and Saskatchewan the contract and application must specially reserve the right to render the contract contestable on the ground of suicide. The policy is void in case of suicide in the province of Quebec. In the other provinces there appears to be no special enactment dealing with this subject. Newfoundland—No provision.

Trustees.

In the provinces of Ontario, Saskatchewan, Alberta, British Columbia, New Brunswick, Nova Scotia and Prince Edward Island, the insured may appoint a trustee to receive payment of insurance money and may from time to time re-

BANK OF NOVA SCOTIA

The amount of dividends paid by the Bank of Nova Scotia last year was $910,000, not $10,000 as a typographical error made it appear in our comments on this bank's statement.

DOMINION BANK'S PROGRESS

During the past year, the total assets of the Dominion Bank, for the first time, rose above $100,000,000. The increase in this account during the year was from $92,000,000 to well over $109,000,000. The gain of $17,000,000 was due chiefly to the increase in deposits and note circulation. Deposits at interest increased over $11,000,000, and deposits not bearing interest $2,000,000. Note circulation increased, the $4,300,000 deposit in central gold reserves fully covering all issues in excess of paid-up capital. The bank's position in cash and quick assets was materially improved. Cash assets at the end of the year amounted to $27,337,000, a gain of $7,586,000. The total of immediately available assets, including securities and call loans, increased $20,000,000 during the year. On December 31st they stood at $57,660,000, or 60 per cent. of the liabilities, as compared with 47.40 per cent. at the end of 1916. These figures reflect an unusually substantial position.

From the profits of the year larger appropriations were made. The sum of $200,000, for example, was written off bank premises. This is twice the amount appropriated for that purpose a year ago. Large contributions were made to various patriotic organizations and a balance $30,000 greater than a year ago was carried forward. The results of operations of the bank during the past two years are shown in the following table:—

	1916.	1917.
Balance brought forward	$ 344,439	$ 363,442
Net profits	969,065	1,087,477
	$1,313,504	$1,450,919
Deductions—		
Circulation tax	54,112	60,000
Provincial taxes	21,450	22,415
Canadian Patriotic Fund	25,000	25,000
Other war funds	4,500	5,500
Pension fund	25,000	25,000
Premises	100,000	200,000
	$230,062	$ 337,915
Dividend	720,000	720,000
	$ 950,062	$1,057,915
Balance carried forward	363,442	393,004
	$1,313,504	$1,450,919

Every bank statement presented this season to date reflects the war financing which these institutions have carried on. In the Dominion Bank's balance sheet, there is an increase of $2,300,000 in the account which includes loans to the Imperial government. There is also an increase of $8,800,000 in the holdings of Dominion and provincial government securities. Taking the two sums, the total now held is $19,200,000, as compared with $8,100,000 a year ago. Mr. C. A. Bogert is general manager of the bank and has given to its affairs a successful and enterprising policy. Sir Edmund Osler is president. Associated with him on the board are a number of influential men who take an active interest in the welfare of this well-known institution.

WESTERN LAND COMPANY'S PROSPECTS

Amalgamated Company Holds Meeting in London—Profitable Farming

Some information as to the progress of the Canada Land and Irrigation Company was given at the annual meeting in London early last month. The present company is the outcome of an amalgamation of the Southern Alberta Land Company, the Canadian Wheat Lands, and the Alberta Land Company, Limited, whose interests, as shown by the scheme of arrangement and Sir William Plender's report, were likely to be improved by consolidation. There has been a great deal of work for the board of this company and for the liquidator of the old companies in carrying the scheme into operation, and it was not until October 1st last that the liquidator was able to issue his circular, calling upon the old shareholders to send in their claims.

Outlining, at the meeting, the process of amalgamation and the company's position, Sir Charles Hobhouse, chairman, said:—

Considerable Legal Difficulties.

"The partly-paid shares were well applied for, and the shares not taken up by the original holders were over-applied for by other shareholders, who desired to take the opportunity of increasing their holding in the new company. The legal difficulties have been considerable, and, although we are now in a position to issue certificates for the fully and partly-paid shares in exchange for allotment letters, it will probably be six weeks or so before debenture stock certificates will be ready for delivery. We are advised that meetings of debenture stockholders of the Southern Alberta and Alberta Land Companies must be held to settle a technical point in the trust deed, and until that is done the certificates cannot even be printed. I understand that notices convening these meetings will be sent out very shortly. The company was registered on July 31st, and our general manager (Mr. D. W. Hays) returned to the property early in that month to make arrangements for taking over the various amalgamated assets.

Area of Property.

"The amalgamated property now consists of about 532,000 acres. Farming operations have been continued with satisfactory and profitable results, and it is proposed to increase the area of land under crop during the coming season, and also to extend our operations in live stock. The board had hoped to send out an irrigation expert before the winter set in to make an independent report on the property and the scheme of irrigation generally, but we were not able to get the man we wanted in time. We propose to send out a man in the spring, when Mr. Hays hopes to have everything in good shape for his inspection. Work on the properties has been more or less suspended for the past three years, and, although Mr. Hays was able during the period of Sir William Plender's receivership to keep up the general maintenance of the irrigation works, you will appreciate that there is an immense amount of work to be done on the other side, now that the company is in a position to start active operations again.

Nearly New Board.

"The present board, with the exception of Mr. Walker, who became a director of the Southern Alberta Land Company in June, 1914, after that company went into the hands of a receiver, is entirely new, and the directors have to approach the various points that arise with an open mind. We know that mistakes have been made in the past in connection with the properties which we are taking over, and for that reason we are specially anxious to take a conservative view, and not indulge in prophetic remarks until a thorough examination and report has been made. At the same time, we have the greatest confidence in Mr. Hays as general manager and chief engineer, and we know that he is heart and soul in his work. Further, we have great confidence in the future of Canada itself. The Hudsons Bay Company report that their sales for last quarter were 122,300 acres of farm lands for £448,000 (an average of about £3 13s. per acre), against 99,400 acres for £346,500 (about £3 9s. 8d. per acre) a year ago. These are very substantial sales, and reports generally confirm the increased enquiry for land at good prices. Mr. Hays has already informed us that he is in a position to sell over 15,000 acres of dry (unirrigable) land at $20 per acre, and has many other enquiries which may result in good sales."

SOCKEYE SALMON CONTROVERSY

Opposition to Shutting Fisheries for Four Years — Last Year Was Bad

Mr. W. H. Greenwood addresses the following interesting letter to *The Monetary Times* from Vancouver:—

The conservation of the sockeye salmon in the Fraser River is engaging the attention of the packers of British Columbia, as well as the packers of Puget Sound. Also, the Commission of National Scientific Research, at whose head is Dr. A. B. Macallum, of Toronto University, has appointed a committee of scientists and canners to investigate the problem. Furthermore, the Hon. J. D. Hazen, chief justice of New Brunswick, is now in Washington, D.C., representing the Canadian government in conferences with the representatives of the United States government, and this very matter, the sockeye salmon in the Fraser River, is one of the questions up for international review. In the midst of so many investigations and commissions, because in the multitude of counsellors there is surely some safety, it looks as if the sockeye salmon will at last get justice, though the whole matter is in the nature of seeking the horse after it is stolen.

Two Opposing Opinions.

There is no unanimity in British Columbia canning circles regarding the best method of conserving the sockeye salmon supply. A considerable body of opinion, whose chief spokesman is Mr. Henry Bell-Irving, of the A. B. C. Packing Company, believes that the Fraser River, both in British Columbia and Washington waters, should be closed to all fishing for a period of four years, in the expectation that the sockeye salmon will, in the natural course, replenish the river. This opinion arises from the belief that over-fishing has produced the reduction in the sockeye salmon in the Fraser. So far as the British Columbia canners are concerned, they believe the greatest over-fishing of the Fraser River sockeye is, and has been, over in Puget Sound by traps and seines. Particularly are seines blamed for the intensive fishing of the sockeye. On the Fraser, in Canadian waters, no seines are allowed, and fishing is all by means of gill-nets, that give the sockeye a fair chance to fight their way up the river to the spawning-beds. It is true there are some traps on Vancouver Island, but they are considered negligible when compared with those on Puget Sound.

Say Total Closing Necessary.

Hence, one school of thought among the canners say a total closing of the Fraser River to fishing on both sides of the line for four years is necessary. Another school of thought in British Columbia says that if the seine fishing on Puget Sound were eliminated the sockeye run would revive itself, and that it would not be necessary to close the river to all fishing. This school of thought goes even further, and maintains that there is no need of closing the Fraser River to fishing; that the river, even at its low ebb of sockeye supply, pays the canneries to fish, and that if a longer weekly closed period were instituted (no fishing allowed from August 25th to October 31st and fishing above New Westminster bridge prohibited), these aids in time would enable the sockeye salmon to come back in greater numbers.

The agitation for a closed season on the Fraser is by many considered to arise from the desire of the Puget Sound canners to shut down in 1918, which is expected to be a particularly lean year. These canners, according to the British Columbia view, are now paying for the intensive fishing methods they have employed for years, and desire to get the British Columbia canners to join with them in an effort to stop all fishing, so that the former may have a reasonable argument to offer their Puget Sound fishermen for shutting down, and at the same time institute a policy that would prevent the British Columbia canners from operating, and possibly making some money. In this view the question of self-interest on the part of the Puget Sound canners is emphasized, and it is reinforced by citations from history, wherein it is shown that when, ten years or more ago, a sincere effort was made by Canada to conserve the sockeye salmon, Puget Sound canners did not play the game. Very likely the times have changed, but the British Columbia canners desire some tangible proof of that change.

If the Fraser River is closed to fishing for four years, what benefit does the British Columbia canner derive? is asked by some of the Fraser River canners. Here, also, self-interest is predominant, as it is in all business, sentimentalists to the contrary notwithstanding. Tying up the Fraser River canneries for four years means deterioration of plants, disorganization of staffs and general demoralization of business and property interests. The need of such closure will have to be proven to the hilt before it will be supported by public opinion.

Again, if the Fraser is closed, what will happen to the 2,500 fishermen who own their gasoline boats and gear? Under the findings of the Royal Commission on Fisheries, northern waters are closed to motor boats. If the Fraser is closed to fishing, it is closed also to motor boats. What are these 2,500 fishermen to do? At once this precipitates a political and economic problem of an acute nature, for the 2,500 fishermen on the Fraser have votes, and in a democracy human rights are the equal of property rights.

What has really happened to the sockeye salmon supply of the Fraser River? Is it unique and unprecedented? Is the sockeye in the Fraser doomed to extinction? Is the need very drastic regulations or the application of sound common sense?

Past Year Was Bad.

The year 1917 was a bad year on the Fraser for the sockeye salmon. Everyone expected it would be a bad year. The obstruction to the free progress of the sockeye to the spawning-beds four years ago predicated a bad year in 1917. Had these obstructions not occurred, the year 1917 presumably would have been a fine year for sockeye in the Fraser in spite of the intensive fishing by seines and traps on Puget Sound.

Bad years for sockeye in the Fraser are not unusual. Those who have the figures dating from 1876 and the records of the Hudson Bay factors, declare that bad years have come and gone on the Fraser since first the sockeye salmon ran. And these bad years were not always due to obstructions in the river, and in some bad years the fish got up to the spawning-beds in great numbers, escaping the nets and the traps by swimming low or in other ways known only to the fish.

Must be Happy Medium.

Is it fair to assume that if sufficient sockeye got up to the spawning-beds to reproduce adequately the natural supply, that the supply of sockeye salmon would be maintained? Then, the problem is to get a sufficient number of sockeye up to the spawning-beds, to see that they are not molested while spawning, and to guard them till they go out to sea. This may be aided by hatcheries, whose utility has yet to be proven to many minds. It is quite possible to have too many sockeye get up to the spawning-beds; too many is as bad as too few. A happy medium must be struck. Closing the Fraser for four years to all fishing might result in too many sockeye getting up to the spawning-beds, and economic waste would result. Perhaps a forty-eight-hour weekly closed season on both sides of the border, with no fishing from August 25th to October 31st and no fishing above Westminster Bridge, might be the common sense method of getting sufficient sockeye up to the spawning-beds. If freshets do not wash away the eggs and they are left as the sockeye leaves them, unmolested, the supply should be forthcoming. Is not that a common sense view?

Opposed to Shutting Down.

Is it not a fact that at one time the Columbia River was said to have been fished out? How does the Columbia River stand to-day as a salmon river? Did it require a four-year closure to rehabilitate itself? What salmon river has been so intensively fished with all manner of gear as the Columbia? Is there not a lesson to be learned from the Columbia River in view of the Fraser River problem?

Furthermore, and finally for this writing, greater fish production is incumbent upon the canners of the Pacific to meet the needs of the Allied armies. Shutting down the canneries of the Fraser River for four years would not aid in the immediate increase of fish production, while its future assistance, so far as can be perceived, must be considered as problematical.

The general view of the British Columbia canners, as one finds it on a casual survey, is that a longer weekly closure, the prohibition of fishing from August 25th to October 31st, no fishing above Westminster, and the elimination of the Puget Sound seines will give the sockeye salmon of the Fraser River a fighting chance to come back.

Individual vs. Corporation Management

INTEGRITY, responsibility, good judgment regarding investments, knowledge of the law respecting trusteeship, executive ability—and these sustained without interruption—are necessary under modern conditions before a trustee can be considered wholly competent.

All of these qualifications can be rarely found in a friend or individual.

THE STERLING TRUSTS CORPORATION possesses all of these essential qualifications of a competent trustee, including assured existence throughout generations of beneficiaries.

The Company will afford complete protection to your estate if appointed executor and trustee under your will.

Our officers will be glad to confer with you in regard to the making of your will or the management of your estate.

SHERBROOKE AS A FINANCIAL CENTRE

Bank Clearing House There Holds High Position—Lumber Industry

"Very few people outside of the city and many citizens within its borders," said Mr. E. W. Farwell, retiring chairman of the Sherbrooke board of trade, at the recent annual meeting, "realize the importance of Sherbrooke as a financial centre, and that in the banks located here is represented over a billion and a third of dollars by way of combined total assets.

"Although less than two years old, the Sherbrooke Clearing House has hardly once been placed at the foot of the column which appears weekly in the public press and elsewhere of the total clearings of the various clearing houses throughout Canada, and at times it has occupied a position well up among the leading cities of the country."

Large Forest Waste.

Referring to the forest waste in Canada, Mr. Farwell said:—"Canadian forests have been ruthlessly wasted, and the public are only becoming aware of the possible consequences. It is stated that over nine thousand square miles of timber have been destroyed during the past year, with a crop stated to be equal to the entire remaining stock of standing timber in the whole of Canada.

"Although foreign business has been almost entirely cut off owing to the lack of tonnage, prices have been well maintained and with the enormous destruction of standing timber that has taken place by fire, notably in British Columbia, there seems to be little or no reason to anticipate any permanent break in prices. The market in South America has become demoralized, and before cessation of shipments, some houses had been selling cargoes at the serious loss, owing to the enormous rate of freight and the fact of the supplies of Brazilian pine near at hand in the South American market without obstacles in the way of transportation. This timber is a very inferior article owing to its being impossible to get it properly seasoned, and as soon as business returns to its natural channels our output will again become available, as there is no other lumber that can permanently replace spruce in its various qualities.

British Timber Market Closed.

"The British market is practically closed, the provision for deck loads having amounted to very little in the way of getting relief in moving stocks. The future prospects of our again entering the European market are more or less uncertain, as it is supposed that very large stocks have been accumulated in Northern Europe, but on the other hand such enormous destruction has taken place that it is possible that these stocks will all be needed as well as some of ours. In ordinary times this trade has gravitated to the Baltic, owing to easier transportation and the fact that the northern countries have had a system of conserving forestry for generations, together with an insurance on standing timber of from 1-10 to 1-20 per cent. per annum which means that every possible protection has been placed over the European forests with a view to saving them and providing for reproduction. There are also vast forests of Russia, but any effect from this source is in the more remote future.

Pulpwood Business Increased.

"The pulpwood business has been marked by a large increase in the total quantity of the raw materials worked up in Canada, which is a favorable showing; also by a very large increase in the returns, which no doubt as in the lumber business is largely absorbed in the higher cost of production; in the logging business much higher wages and expenses and often very poor and inefficient labor.

"Stocks are if anything, we understand, low all through the country, and from information we have received it would appear that low-priced lumber is a thing of the past and that the present high prices are likely to be maintained for a very long time.

"The local lumber business is very trifling in coniferous wood. Local mills during the past year have been mainly manufacturing hard wood, the sale of which has been good for the last two years, owing to the demand for munition boxes and the ordinary demands for cabinet work, etc. The timber tributary to the St. Francis is mostly controlled by the paper-making companies and what can be said generally, as in the preceding year, applies to them locally. We think it is well to again suggest that prominence be given to the fact that the timber supplies are disappearing and to the pressing need of conservation. This is only seconding what is being done by the forestry department, and it seems desirable to add all the weight possible to its efforts."

NATIONAL BANK OF SCOTLAND

The reserve fund of the National Bank of Scotland, Limited, one of the oldest and strongest banks in Scotland, is now £800,000, exclusive of £120,000 set aside to meet a dividend of 16 per cent., and £62,961 carried forward. The bank was established in March, 1825. Its subscribed capital is £5,000,000, of which £1,000,000 is called up and £1,000,000 is uncalled, leaving £3,000,000 as reserve liability.

The report of the directors for the year ended November 1st last, shows that after providing for all bad and doubtful debts, the net profit for the year was £297,557. To this there was added the balance brought forward from 1916, namely, £54,365, making together £351,922, less, bonus paid to staff, £8,961, giving a sum of £342,961 for distribution. A dividend at the rate of 16 per cent. per annum absorbed £160,000, less, income tax, £40,000. The following appropriations were made: To the heritable property account, £10,000; to the officers' pension fund, £10,000; to the investment account, £40,000; and to the reserve fund, £100,000. Carried forward to this year was the sum of £62,961.

The head office of the National Bank of Scotland is in Edinburgh. The general manager is Mr. John Stirling Cockburn and the secretary Mr. George Alexander Hunter. The London office is in charge of the manager, Mr. John Ferguson and the assistant manager, Mr. Dugald Smith. The bank has a strong and influential directorate.

TRUSTS AND GUARANTEE COMPANY

The first annual meeting to be held in the Trusts and Guarantee Company's handsome new building on Bay Street, Toronto, was commemorated last week with the presentation of a satisfactory balance sheet. The directors were able to report an increase of $1,250,000 in assets under administration. The report was presented by the president, Mr. James J. Warren. The company now administers more than $17,000,000 of assets. The principal increase is shown in the guaranteed trust and the estates and agency funds in excess of $5,000,000 entrusted to the company for investment, which are $600,000 more than the previous year. The usual dividends were paid during the year and the balance of net profits was credited to the profit and loss or reserve account.

The balance sheet is signed by the president and by Mr. E. B. Stockdale, the capable general manager. The company's assets under capital account total $1,872,444, exclusive of uncalled capital stock of $611,636. The former total is made up of the following items: Mortgage loans, call loans, debentures and other securities, with interest accrued thereon, $1,610,129; office furniture, fixtures, etc., at Toronto, Calgary and Brantford, $20,000; real estate, $139,724; and cash on hand and in bank, $102,589.

Securities on real estate bonds, debentures, stock, etc., account for $4,092,529 of the assets under the guaranteed trust account, which amount to $5,214,292. The remaining items under this head are as follow: Government, provincial, municipal and rural district bonds, $1,070,248; and cash in bank, $51,514.

The substantial sum of $331,593 cash in bank is the smallest amount contributing to the assets under the estates and agency account. These assets total $9,083,895 and the remaining items are mortgages on real estate, $1,708,257 and other securities, including government and municipal bonds and unrealized original assets $7,044,044.

The following directors were elected at the annual meeting: Messrs. J. H. Adams, Toronto; W. D. Bell, Chesley; A. C. Flumerfelt, Victoria, B.C.; Lloyd Harris, Brantford; William Pearce, Calgary, Alberta; Thomas Reid, Toronto; C. E. Ritchie, Akron, Ohio; Lieut.-Col. S. C. Robinson, Walkerville, Ont.; Joseph Ruddy, Brantford, Ont.; John D. Ivey, Toronto; E. B. Stockdale, Toronto; W. Thoburn, Almonte; James J. Warren, Toronto; Matthew Wilson, K.C., Chatham, Ont. The board subsequently met and unanimously elected Mr. James J. Warren president, Mr. C. E. Ritchie vice-president, and Mr. E. B. Stockdale general manager.

Double Your Business by Using a Ford

YOUR business is limited by the area you are able to handle. Why not widen your field of activity by using a Ford car? Many of the most ambitious and successful travelers in almost every line of business are doing this.

They have found that a Ford car enables them to cover much more territory—see their prospects oftener—save time—increase sales—reduce traveling expenses, and "meet their man" with added dignity and in a better mood.

Surely this is worth while, and especially so when we consider how easy it is to own a Ford—its enduring qualities—its power—its simplicity, and its low cost of upkeep.

A Ford car in your business will soon pay for itself. Think it over.

GOVERNMENTS DISCUSS STEEL SUPPLIES

Arrangements are in progress between the Canadian and United States governments for pooling supplies of steel for shipbuilding purposes in connection with the Canadian policy of shipbuilding under government operation or control of shipyards.

Mr. A. Johnston, deputy minister of marine, and Mr. Charles Duguid, naval architect of the department, spent last week in Washington, where, with Sir Charles Gordon, they conferred with the United States authorities in regard to the required steel supply to meet the requirements of Canada's ship construction programme. The fullest possible co-operation was promised on behalf of the United States government in connection with the new policy of State construction. It has been decided, with a view to meeting special British requirements, that no further orders must be taken in Canada for new vessels other than of Canadian or British register. At present a number of new ships are being completed in Canada on Norwegian order.

CANADA LANDED AND NATIONAL INVESTMENT

At the annual meeting of the Canada Landed and National Investment Company, which will be held on February 13th, a very satisfactory balance sheet will be presented. The net profits for the year were $158,209, and a balance more than twice as large as that of a year ago was carried forward.

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended January 25th, 1918:—

Buffalo Mine, 208,950; Dominion Reduction Company, 176,000; La Rose Mine, 131,982; Coniagas Mines, 173,000; total, 689,932.

The total shipments since January 1st, 1918, now amount to 3,033,699 pounds, or 1,516 tons.

CANADA PERMANENT MORTGAGE CORPORATION

ANNUAL MEETING

The Annual Meeting of Shareholders of the Canada Permanent Mortgage Corporation was held at the Head Office of the Corporation, Toronto Street, Toronto, on Friday, January 25th, at twelve o'clock noon.

The chair was taken by the President, Mr. W. G. Gooderham. The Secretary, Mr. George H. Smith, was appointed Secretary of the meeting and read the Report of the Directors for the year 1917, and the Statement of Assets and Liabilities, which are as follows:—

REPORT OF THE DIRECTORS.

The annual statement of the business of the Corporation for the year 1917 which is herewith submitted, affords your Directors much pleasure and satisfaction. It has been duly certified by the Auditors.

The net profits for the year, after deducting interest on borrowed capital, expenses of management, all charges and losses, together with War Taxes and sundry contributions to Red Cross and Patriotic Funds, amounted to	$ 852,325.14
The balance at the credit of Profit and Loss at the beginning of the year was	195,652.27
Making available for distribution	$1,047,977.41

This sum has been appropriated as follows:—

Four quarterly dividends of Two and One-half per cent. each on the Capital Stock	$ 600,000.00
Transferred to Reserve Fund	250,000.00
Balance carried forward at credit of Profit and Loss	197,977.41
	$1,047,977.41

All of which is respectfully submitted.

W. G. GOODERHAM,
President.

Toronto, January 9th, 1918.

R. S. HUDSON,
JOHN MASSEY, } *Joint General Managers.*

We beg to report that we have examined the foregoing Accounts together with the books and vouchers of the Corporation, and that we have obtained all the information and explanations we have required. In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs, according to the best of our information and as shown by the books of the Corporation.

A. E. OSLER.
HENRY BARBER,
Chartered Accountants. } *Auditors.*

Toronto, January 8th, 1918.

In moving the adoption of the Report of the Directors, the President said:—

I am convinced that the Report and Statement which have just been read by the Secretary will afford the Shareholders of the Corporation, the same degree of satisfaction which the Directors feel in presenting them.

In addition to the payment of four quarterly dividends, aggregating ten per cent. on the Capital Stock, we have been able to continue the policy of recent years by adding another quarter of a million dollars to our very substantial Reserve Fund.

The conditions to which I directed your attention a year ago as to obtaining money in Great Britain have, as was anticipated, continued throughout the year. The investment of money outside the United Kingdom is not encouraged by the Government of Great Britain, while the interest obtainable by investors in British Government securities is so attractive that at the high rates which would have to be paid to compete therewith we could not make profitable use of the money which might be obtained. The amount of our Sterling Debentures, therefore, again shows some diminution. But for this fact, together with the increased cost of our borrowed money, it would have been possible to have produced greater profits.

The amount of our Deposits and of our Debentures payable in Canada have both slightly increased during the year. This is gratifying in view of the two issues of Canadian War Loans in 1917 which have been widely distributed among all classes. It is recognized that our established Mortgage Companies occupy an important position in the economy of the Dominion. They provide the owners of land with money which is vitally necessary to enable them to increase production, and the investment of moneys by the Canadian people in our Debentures is therefore not discouraged by the Government as is the sale of many classes of Bonds and other securities.

A year ago is was hoped that 1917 might see the practical conclusion of the war. In that respect the year has proven one of much disappointment. I have no intention of prophesying as to when a cessation of hostilities may take place. While they continue the financial horizon cannot but remain overcast. It will continue to be the policy of your Directors to conserve to the fullest extent the resources of the Corporation, and to maintain it in a position in which it will be able to meet any situation which may arise. This necessitates our keeping a larger amount of cash unemployed and at all times available than was deemed necessary in more normal times. By this and numerous other features of a conservative policy our profits are somewhat reduced, but we have the comfort and satisfaction of being able to face the future with every confidence, whatever may be the vicissitudes which at present cannot be foreseen.

While the grain crops in our Western Provinces were not as ample as had at one time been hoped, they were of a quality which has not been excelled and of fair volume in the aggregate. The high price fixed by the Government has, therefore, returned to the grain growers a large amount of money and they have been able to meet their interest and also to reduce their principal in a manner most satisfactory. By gradually reducing the original indebtedness, in accordance with what has been our fixed policy for many years, not only is the Corporation's margin of security increased, but the mortgagor's increased equity is an encouragement to greater effort and progress, resulting in advantage to himself and to the community. There have been, as usual, individual cases of inability to meet their instalments through partial or complete failure of crops. In such cases, consideration has been cheerfully given to their circumstances, and the reduction of the indebtedness which had generally been made in previous years has enabled us to carry over these customers till next season, with advantage and satisfaction to them and with perfect safety in the Corporation.

As in previous years I can assure the Shareholders that there is good value for every dollar of the Corporation's assets. With every possible precaution, we can never fully guard against borrowers proving unsuccessful. The farmer who meets with unforeseen misfortune, becomes discouraged and fails to meet his obligations, usually allows his property to deteriorate, and occasionally, when we are reluctantly compelled to find a purchaser for it, the full claim cannot be realized. Our system of inspection, however, is so thorough that, not only are these losses minimized but are usually foreseen. In the balance sheet submitted to you, ample provision has been made for any possible losses.

It is with the most sincere regret that I have to record the death during the past year of our Second Vice-President, Mr. G. W. Monk. Mr. Monk had been associated with the Canada Permanent Loan & Savings Company for a long period of years, was one of the first Directors of this Corporation, and held the office of Second Vice-President since 1910. For upwards of a quarter of a century he represented the County of Carleton in the Provincial Legislature. His wide and varied experience and wise counsel will be greatly missed by his colleagues on the Board. Mr. R. S. Hudson has been appointed Second Vice-President, and his long experience will thus be increasingly serviceable to the interests of the Corporation. The vacancy on the Board was filled by the appointment of Mr. William Mulock, Jr., who represents very important holdings in the shares of the Corporation.

I regret to say that since our last meeting, four bright young men of our staff have been killed in action and a number have been wounded. It is gratifying to inform you also that some have received Decorations from His Majesty, the King.

I think it is not necessary to detain you with any further remarks. I have much pleasure in moving, seconded by the First Vice-President, that the Report of the Directors be received and adopted, and, together with the General Statement, be printed and a copy sent to each Shareholder.

The Vice-President, Mr. W. D. Matthews, in seconding the motion for the adoption of the Report, said: Mr. President and Gentlemen:—

The President in his address has explained to you that the Directors in making loans to borrowers are able to rely upon careful inspection of all the properties by our own experienced Inspectors before these loans are made. Without this inspection and without the very complete system established by the Management of the Corporation for the scrutiny of accounts and reinspection of securities, you can readily understand that the loaning and supervision of $26,700,000 (which is the amount of the mortgages held by your Corporation), would be a very onerous and difficult task. That we have been able to loan this immense sum of money on mortgages, and present a statement to you which, as the President says, and as I am sure you will corroborate, is highly satisfactory, speaks well for the Management that the Corporation has received. The management, of course, devolves upon the Joint General Managers, the Secretary, the Treasurer, and the Inspectors. I can cheerfully testify to the care and thought that is given by the management and staff in the conduct of the Corporation's business.

The outbreak of the War caused anxiety to the whole community, the people fearing its effect upon Merchants, Manufacturers, Financial and all other Companies. The demand for war material, however, brought into existence new enterprises and industries throughout the Dominion, which made business conditions so favorable that confidence was restored and people generally began to realize that, so far as business and finance was concerned, we had not suffered very much.

This prosperity continued to a degree that financial and manufacturing concerns were placed in excellent credit and on a financially sound basis. Added to this was the fact that all the products of our farms, mines, forests and sea were required, and at once began to command unusually good prices, finally resulting in the Government undertaking to handle most of these materials and fixing values at which they were to be taken over. These prices are such that it has brought the farming community to a very prosperous condition.

Our farmers never realized so much money for what they had to sell as under present regulations. As you are all aware, the backbone of any progress or prosperity that we have made in Canada, is due almost entirely to the development of our Natural Products. The Governments are now instituting campaigns for the increase of supplies of various kinds, particularly of food. In the Northwest the campaign for raising a larger number of hogs is resulting very satisfactorily, and I hope that the preparations that have been made by the farmers, and the inducements offered by the Governments for the production of more grain, will also prove to be as highly satisfactory as we could wish. There is every indication that, even after peace is declared, all the products we have to sell will be wanted and will command good prices, so that this prosperity is likely to continue for some time to come. Even in the early period of the war the values of farm lands in the Northwest have been fully maintained, and, with the prosperity that has attended farming operations, values are not only being maintained, but in nearly every district have been enhanced. As we have very largely given attention to the lending of money on farm properties in the Northwest, the advance in land values and the prosperity of the farmers, have placed our mortgages in a very satisfactory condition.

The President has pointed out that the amount of our Sterling Debentures has somewhat decreased since we last presented our Report, but this was to have been expected, and the fact that we have such a large amount still outstanding is a pleasing tribute to the fact that the credit of our Corporation stands high in Great Britain. I, therefore, think that we may look forward to continued success. Even after peace is brought about, which some authorities feel will bring with it the up-setting of business, and which has caused more or less anxiety, I am quite sure that our Corporation may confidently expect a continued period of satisfactory results.

The President has referred to the figures which have been read to you, and which you have had opportunity to look over. The statement does not need any further comment on my part, and I, therefore, have much pleasure in seconding the adoption of the Report.

The motion was then put to the meeting, and was unanimously carried.

The Shareholders unanimously approved and ratified certain subscriptions which the Directors had made to the Canadian Patriotic Fund, the British and Canadian Red Cross Societies, and for other patriotic purposes.

The election of Directors for the ensuing year was then held, and resulted in the unanimous re-election of Messrs. W. G. Gooderham, W. D. Matthews, R. S. Hudson, Col. Albert E. Gooderham, J. H. G. Hagarty, John Campbell, S.S.C. (Edinburgh), John Massey, F. Gordon Osler, E. R. C. Clarkson and William Mulock, Jr.

Messrs. Henry Barber and A. E. Osler were re-appointed Auditors for the current year.

At a meeting of the Board, held after the adjournment of the Annual Meeting, Mr. W. G. Gooderham was re-elected President, and Mr. W. D. Matthews, First Vice-President, and Mr. R. S. Hudson, Second Vice-President.

DIVIDENDS AND NOTICES

THE QUEEN CITY FIRE INSURANCE COMPANY

The Annual General Meeting of the Shareholders of this Company will be held pursuant to the Act of Incorporation on Wednesday, the 20th day of February, 1918, at 12 o'clock noon, at the Company's Office, Queen City Chambers, No. 32 Church Street, Toronto, to receive the report of the Directors for the past year, to elect Directors for the ensuing year, and for the transaction of such other business as may be transacted at a General Meeting of Shareholders.

CANADIAN SURETY COMPANY

A material reduction in the ratio of expenses and net claims paid was shown in the report presented at the annual meeting of the Canadian Surety Company, Toronto, last week. Out of net profits for the year, amounting to $26,656, a dividend of 5 per cent. was paid and substantial transfers were made to the several reserve funds. The net premiums written during 1917 amounted to $122,606, as compared with $62,979 in the previous year, an increase of $59,627. The total assets of the company on December 31st, 1917, were $370,654, an increase of $81,001 over 1916. The combined capital stock and surplus totals $289,010.

The directors re-elected for the ensuing year are Messrs. F. W. Lafrentz (president), Sir George Burn (vice-president), Messrs. R. R. Brown, T. Bradshaw, W. H. Hall, J. B. Laidlaw, F. G. Osler, F. J. Parry and Henry C. Willcox.

INTERNATIONAL FISHERIES PROBLEMS DISCUSSED

The Canadian delegates to the American-Canadian Fisheries Conference arrived in Washington on Tuesday, January 15. The members of the Canadian delegation are the Hon. J. Douglas Hazen, chief justice of New Brunswick, who was for six years minister of marine and fisheries in Canada; Mr. George J. Desbarats, C.M.G.C.E., deputy minister of naval service; and Mr. William A. Found, superintendent of fisheries. Mr. Arnold Robertson, C.M.G., first secretary of the British Embassy, is secretary.

The United States delegation is composed of the Hon. William C. Redfield, secretary of commerce; Mr. Edwin F. Sweet, assistant secretary of commerce; and Dr. Hugh M. Smith, commissioner of fisheries. Mr. Maitland Dwight, of the department of state, is secretary of the United States delegation. Mr. Edward T. Quigley, assistant solicitor of the department of commerce, is assistant secretary and legal adviser.

A meeting was held and since then the conference has held three sessions, which have all been marked by unanimity of thought and harmony of purpose. The members of the conference planned to take advantage of the fact that Canada and the United States were associates in the war, and therefore had aims akin more than ever before. They agreed that this was the vital moment for smoothing away difficulties which had been for many years sources of irritation to the people of the United States and Canada, and that the basic thought of the delegates, especially in view of the present food crisis from which the whole world is suffering, should be the supply of the largest amount of fish to the largest number of people in both the Atlantic and Pacific coasts.

Among the questions already discussed to a greater or lesser degree are the following: The protection of the salmon in and around the Fraser River; the protection of the halibut which has been overfished, the centre of this industry being Seattle, Vancouver, Prince Rupert and Ketchican, on the Pacific; equitable rules governing the use of Canadian and United States ports by the fishing vessels of both countries, however propelled; the lobster fisheries of the Atlantic; pike-perch fishing in Lake Champlain; and the possible passage of rules relating to the whale industry.

The Canadian delegates returned this week, but will participate in further conferences.

Dandurand and others.

REPORT SUBMITTED BY THE BOARD OF DIRECTORS TO THE GENERAL ANNUAL MEETING OF THE SHAREHOLDERS.

Gentlemen:—

In accordance with the Bank Act, we submit to-day our accounts for the financial year 1917, ending on the 31st December last. This is the eighteenth statement issued since the organization of your Institution.

During the last year, as in fact since the beginning of the European war, we have in co-operation with the other Canadian banks, lent our services to the State in order to place at its disposal all the resources which it required under the circumstances, while at the same time giving to our commercial and industrial connection, the necessary support to meet the present and future situation.

During the past year, as you know, the Minister of Finance invited all Canadian Banks to co-operate in the subscription to the Victory Loan, the great success of which has astonished the whole world. We placed our branches at the disposal of the subscribers and we have had the satisfaction of being able to turn in subscriptions amounting to the imposing figure of nearly $2,000,000. This result shows the patriotic spirit of our customers as well as the abundance of savings in the localities in which our Bank is established, when we take into account that notwithstanding the withdrawals necessitated by these subscriptions, the liabilities to the public, including the deposits made with your institution, show an increase of over $3,200,000 during the past year.

The total of our liabilities on the 31st December last reached the sum of more than $21,000,000. You will no doubt see in this increase evidence of the confidence inspired by the Provincial Bank of Canada in the Province of Quebec, Ontario and New Brunswick, where it is now established.

We pointed out last year the remarkable prosperity then existing in the Agriculture, Trade and Commerce of our country. This prosperity has been generally maintained during the past year.

Under the present circumstances, and relying on the approval which you, the Shareholders, have always given to your Directors, we have continued to hold a large amount of cash on hand, and a considerable proportion of other assets readily convertible into cash; in fact, you will notice in the general statement liquid assets amounting to $13,000,000, being more than 68½ per cent. of our obligations to the public.

As usual, the Bank Inspectors have made their annual inspection of each branch and of the head office, and moreover in conformity with the Bank Act, the two special Auditors chosen by the Shareholders have examined the securities and accounts comprised in the general statement of your institution. The certificate duly signed by them appearing at the foot of the statement testify to their entire satisfaction.

Our inventory has been prepared with the same care as in former years and all expenses in connection with the erection of buildings, purchase of safes and furniture are being gradually written off.

After deducting general expenses, interest paid to depositors, provision for losses, etc., our profit and loss account shows a surplus of more than $207,000, being nearly 21 per cent. on the paid-up capital of the Bank.

From the profits the sum of $50,000 has been added to the Rest, which now amounts to the large sum of $750,000, being 75 per cent. on the paid-up capital of the Bank.

The Board of Censors (the permanent controlling commission for the savings department) have given most devoted attention to the interests of the institution, as shown by their monthly task in the examination of the investment securities.

During the difficult period through which our country is now passing, when the efforts of all should tend to the same object, our staff has given us fullest satisfaction; the fine spirit which animates it, its industry, its zeal and devotion have greatly contributed to the result shown by the statement which we lay before you and with which undoubtedly you will be satisfied.

For the Board of Directors,
H. LAPORTE,
President.
TANCREDE BIENVENU,
Vice-President and General Manager.

REPORT OF THE COMMISSIONERS-CENSORS FOR THE YEAR 1917.

Gentlemen:

Unfortunately, it is again during the war that we have to submit our Report for the past year.

However, we have much pleasure in saying that the business of your Bank, as in the past, has increased considerably; this is the natural result of the wide-spread activity in the business of the country, which has been pointed out to you in 1916 and which has continued in 1917.

The management of the Bank has always kept, as we have seen from the monthly statements, a large amount of cash in hand, in order to be ready for all contingencies; in this we are sure that they meet with your approval.

We have regularly gone through the process of verifying monthly, during the year 1917, the investment securities, such as Government Bonds, Municipal Bonds, etc., held by the Bank. At all times, as shown by the minutes of our meetings, the total amount of those securities and of the cash on hand was more than sufficient to meet the requirements of your by-laws regarding the control of the Savings Department.

It is with pleasure that we draw your attention to some interesting figures in connection with the increase in the business of your institution. The statement of the Provincial Bank of Canada has reached to-day the imposing figure of twenty-one million dollars. The liabilities to the public, including the deposits, show an increase of more than three million two hundred thousand dollars, and the number of depositors is now over seventy thousand; and lastly, the reserve of accumulated profits is at present of seven hundred and fifty thousand dollars, notwithstanding the fact that the shareholders have never been asked to contribute to this fund, the shares representing the actual capital of the Bank having all been subscribed for at par.

We therefore advise you, Gentlemen, to approve the general statement and the accounts for the year 1917 as they have been submitted to you.

For the Board of Commissioners-Censors,
(Signed) A. LACOSTE

SHAREHOLDERS' AUDITORS' CERTIFICATE.

To the Shareholders of
THE PROVINCIAL BANK OF CANADA.

In accordance with the provisions of sub-section 19 and 20 of section 56 of the Bank Act, we report to the shareholders as follows:—

We have examined the above balance sheet with the Books at Head Office and with the certified returns from the branches. We have obtained all the informations and explanations that we have required and are of opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank.

In addition to our verification as on December 31st, 1917, we have during the year checked the Cash at the Chief Office and verified the securities representing the investments of the Bank at its Head Office and principal branches, and found them to agree with the books of the Bank.

The above statement to which reference is made in the report of the Directors is properly drawn so as to exhibit a true and a correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us as shown by the books of the Bank.

(Signed) ALEX. DESMARTEAU, L.I.C., Montreal.
(Signed) J. A. LARUE, C.A., Quebec.

Montreal, January 12th, 1918.

The board of directors was re-elected and at a subsequent meeting of the directors, the following officers were elected: Hon. H. Laporte, president, and W. F. Carsley and Tancrede Bienvenu, vice-presidents, and at a meeting of the Commissioners-Censors held immediately after the directors' meeting, Sir Alex. Lacoste was elected president, and Doctor E. P. Lachapelle, vice-president for the ensuing year.

PULP AND PAPER COMPANY'S BOND OFFERING

The Royal Securities Corporation, Limited, is offering a block of $100,000 of the first mortgage 6 per cent. bonds, 20-year, of the Mattagami Pulp and Paper Company, Limited, with a bonus of common stock. The bonds are a first charge on property valued at three times the amount of the issue. The company controls pulpwood lands containing 4,000,000 cords of spruce, estimated to be sufficient for 50 years of operation. The mortgage is closed at $2,000,000.

WINDING UP ENEMY BANKS

Sir William Plender has issued his second report on the liquidation of the London branches of enemy banks, bringing the record of the operations down to September 30, 1917. The banks involved are the Deutsche, the Dresdner, Direction der Disconts-Gesellschaft, Oesterreichische Laenderbank and the Anglo-Austrian Bank. Following is a summary of the results of Sir William's controllership to September 30:—

Payments to British, allied and neutral creditors	£27,960,000
Estimated value of securities delivered to British, allied and neutral subjects	8,424,600
Cash realization of assets, including the sale of securities	25,534,528
Repayments to Bank of England for advances made under acceptance scheme	8,097,436

The liabilities of the five banks to enemy creditors on September 30 amounted to £3,427,104, while assets possessed a book value of £4,601,340. The indebtedness to the Bank of England stood at £4,104,108.

The scheduling of securities for vesting purposes was completed recently. Their estimated value is £17,270,000.

"It is impossible," says Sir William Plender, "for the affairs of the London branches to be finally liquidated during the war within the terms of the licenses, if by 'final liquidation' is meant the collection of all assets, other than enemy assets, and the repayment of the advances by the Bank of England, £4,104,108, and in the case of the Oesterreichische Laenderbank of its unsecured creditors (approximately £630,000). The assets, mostly book debts, remaining to be realized, possessed on September 30, 1917, an aggregate book value of £3,448,780, excluding liens on enemy securities (£841,543), and debts in occupied territory (£561,204); but of such aggregate value only a small part is capable of collection during the war."

PROVINCIAL BANK OF CANADA

Like other bankers, Mr. H. Laporte, president, and Mr. Tancrede Bienvenu, vice-president and general manager of the Provincial Bank of Canada, referred in their directors' report to the success of the Victory Loan. "The great success of the loan has astonished the whole world," they said, adding: "We placed our branches at the disposal of the subscribers, and we have had the satisfaction of being able to turn in subscriptions amounting to the imposing figure of nearly $2,000,000. This result shows the patriotic spirit of our customers, as well as the abundance of savings in the localities in which our bank is established, when we take into account that notwithstanding the withdrawals necessitated by these subscriptions, the deposits made with your institution show an increase of over $3,200,000 during the past year."

The Provincial Bank of Canada, which has done so much to develop the resources of Quebec province and to cater to its business, enjoyed an excellent year's operations in 1917. The bank is also well established in Ontario and New Brunswick. As a result of the past year's work, the directors were able to present an excellent financial statement and report at the annual meeting last week. After deducting general expenses, interest paid to depositors, provision for losses, etc., the profit and loss account shows a surplus of more than $207,000, or nearly 21 per cent. on the paid-up capital. From the profits, $50,000 has been added to the reserve, which now stands at the substantial sum of $750,000, being 75 per cent. on the bank's paid-up capital. A large amount of cash is held on hand, and also a considerable proportion of other assets readily convertible into cash. The statement shows liquid assets amounting to $13,000,000, being more than 68½ per cent. of the bank's obligations to the public. The total liabilities at the end of the year were more than $21,000,000. The bank's general statement reflects a healthy financial position and good direction and management of its affairs.

STATE INSURANCE RECOMMENDED

Increases of 15 to 40 per cent. in compensation for workmen, less trouble in conciliation, quick action, doing away with all litigation, and the appointment of a board to administer the proposed act are the chief recommendations in the report of the committee appointed last August to go into the matter of the workmen's compensation act for Alberta, according to a dispatch from Edmonton.

The draft act as submitted to Premier Stewart recently, recommends what is commonly known as state insurance, and the report includes a recommendation that the legislation be brought in at the coming session of the legislature. At the present time the employer carries his own insurance, or insures in a liability company, but in the draft act the state board will carry the insurance, to which each employer of labor will have to contribute.

CANADIAN NORTHERN STOCK ARBITRATION

The board of arbitration appointed by the government for the purpose of determining the value of the 600,000 shares of Canadian Northern Railway stock held a preliminary meeting at Osgoode Hall on Monday. The board consists of Sir William Meredith, Messrs. R. E. Harris and Wallace Nesbitt.

Proceedings opened with the reading of the agreement under which the valuation of the stock was arranged for. According to that agreement if the valuation is over $10,000,000, the price to be paid will be $10,000,000. If under $10,000,000 the amount of the award will be paid.

Sir William Meredith stated that he had received a number of communications from persons alleging claims against the road. "The government of British Columbia," he said, "had enquired as to what provisions would be made for representatives of that province to present their views. David Russell, of St. John, N.B., claimed some millions of dollars for land which he alleges the company obtained by devious means. Mr. Russell will be advised by the board to place his claim in the hands of counsel. Sir William stated that there was also a claim by contractors for $130,785 on an allegation of improper classification. There was also a claim by a municipality near Edmonton for a tax bill.

Mr. W. N. Tilley, K.C., represents the Dominion government, and with him are associated Mr. Gerard Ruel, formerly of the Canadian Northern, and Mr. E. E. Fairweather, solicitor for the department of railways and canals. Mr. Pearce Butler, of the Minnesota Bar, and Mr. McGregor Young, K.C., appear for Mackenzie, Mann and Company. Mr. I. F. Hellmuth, K.C., represents the Bank of Commerce, pledgees of 510,000 shares of the stock owned by Mackenzie and Mann.

MONARCH LIFE ASSURANCE COMPANY

A number of strong features stand out in the report presented at the annual meeting of the Monarch Life Assurance Company, held at Winnipeg last week The gross death claims, for example, paid last year, including those occurring previously, were less than 76 per cent. of the expectation under peace conditions. The deaths from war occurring during 1917 showed a considerable decrease below that of the previous year, so far as the company's experience is concerned. On its invested funds, all placed in excellent securities, the average rate of interest earned was 7.58 per cent. At the same time, the ratio of expense was materially reduced.

As a result of a substantial increase in business last year, the company now has in force over $11,500,000 of business. The large volume of cash business is an indication of the solidity of the company's growth. The Monarch Life Assurance Company has, during the past few years, especially, made enviable progress. Mr. J. W. W. Stewart, the managing director, is a capable business man and careful underwriter. Under his management, with the assistance of a good directorate, he has placed the company in a sound financial position, and has earned for it the confidence of the public.

At the annual meeting last week the directors were all re-elected—namely, president, Mr. J. T. Gordon; vice-presidents, Messrs. W. A. Matheson and F. W. Adams; managing director, Mr. J. W. W. Stewart. The other directors are: Messrs. W. R. Bawlf, Col. H. A. Mullins, C. E. Gordon, H. W. Echlin and R. G. Ironside. Mr. J. A. Macfarlane, A.I.A., was reappointed secretary and actuary, and Mr. George J. Telfer was appointed treasurer. Messrs. John Scott and Company were reappointed auditors for the ensuing year.

SHIPBUILDING IN BRITISH COLUMBIA

(Staff Correspondence.)

Vancouver, January 26th.

A notable event in the history of the shipbuilding industry on this coast was the launching of the first of ten steel steamers from the yards of Messrs. J. Coughlan & Sons, False Creek. The ship is named the "Alaska," and is the largest built in British Columbia. It is 427 feet overall, 54 feet beam and 29 feet 9 inches deep. The owner is Mr. Knut Knutson, of Haugesund, Norway, and the sponsor at the launching was Mrs. T. H. Kolderup, wife of the Norwegian consul at Seattle.

Mention has been made from time to time of the construction of steel steamers, and now that one is in the water people will realize more than ever the magnitude of the new industry. The builders propose to launch one every month this year. This will give work to about 1,800 men. The launching was the occasion of a celebration, and the invited guests included all the prominent members of the various public and semi-public bodies of the city as well as other leading citizens.

Within the last two weeks, launchings have taken place also of three of the ships being built under the direction of the Imperial Munitions Board. One of these was the "War Nootka," built by the Western Canada Shipyards, on False Creek, and this, too, was an event of some importance, as it was the first to be built on the mainland for the Board. Two others have been launched at Victoria—the "War Songhee," from the Foundation Company's yards, and the "War Yukon," from the yards of the Cameron Genoa Mills Shipbuilders, Limited.

These wooden steamers being built by the Imperial Munitions Board are of 2,800 tons, 250 feet in length, 43½ feet beam, and 25 feet deep.—R. B. Bennett.

How Canada Will Take Production Census

COMPREHENSIVE *Annual Survey of Crops, Live Stock, Dairying, Fisheries, Mining, Lumbering and General Manufactures, Will Be Made—Reorganization of Our Government Statistics—Co-operation Between Dominion and Provinces — Outline of New Organization.*

By R. H. COATS
Dominion Statistician and Controller of Census.

THERE is no great need to emphasize the importance of production, especially in young countries where it is usually the sole source of the national income. Canada's future, economically, is peculiarly a matter of her production, for we went deeply into debt during 1900-1913 on what was essentially "equipment" for production—added to which is our war debt, an anodyne while we are spending it, but to be paid in hard earnings eventually. Hence there is no one question that calls more urgently for consideration in Canada than production—no subject, in other words, on which we have greater need for the accurate and comprehensive measurements that are furnished by an adequate system of statistics. Not, of course, that we must postpone investigation of other phenomena, more particularly our "man power" (hitherto much neglected), or our various social activities. But even these are determined to a degree by economic considerations; and production is certainly anterior to trade, finance, transportation and the like, which often bulk larger in statistical publications.

To organize a comprehensive scheme of production statistics is no mean task, for it will be seen at once that it involves the closest acquaintance with an extremely wide range of activity, including such sharply differentiated operations as the growing of crops, the rearing of herds, the raising of minerals, the catching of fish, the hewing of timber,—each a world of itself,—not to mention all those complex and interlocking subsidiary processes that go on in shops, mills and factories in converting the raw materials thus won from nature into the multifarious forms in which they enter human consumption.

Existing Statistics of Production.

Naturally our first statistics of production were those of certain Dominion and provincial departments which have executive functions in different sections of this variegated field. The mines department of the provinces, for example, collect royalties upon or otherwise supervise the mining output, the process automatically yielding statistics. Similarly, departments of agriculture, fisheries and forestry came, in certain cases, to publish the statistics thrown off by or needed in their administrative activities. But while much valuable information has been secured in this way, the statistics as a whole, have not been satisfactory. Executive departments very properly adapt their methods to their executive needs, and as these often differ widely the applicability of the statistics for other than the immediate purpose is extremely limited.

One cannot, for example, with safety compare a statistic of one provincial mines department with the corresponding statistic of another. Still less can one collate the statistics of, say, a mines and a forestry department; or a fisheries and an agricultural department. Much overlapping has ensued: we have three independently collected and compiled totals of the bricks manufactured in Ontario in 1916. At the same time wide areas of the field have been left uncovered. Again, for numerous phases common to all industrial processes, but falling outside the purview of such departments as have been mentioned, (notably the problems surrounding capital and labor), we have had still another series of departments resurveying the field with their own purposes alone in view; and still other bodies like the conservation commission and the research council have also been at work from still another standpoint. It is true that once in ten years a comprehensive census of industry has been taken by the census and statistics office. But decennial statistics of production are only a little better than no statistics at all, and for other reasons that will be mentioned further on, the decennial census was never wholly successful with production. The remedy lies, of course, in unifying the system, by bringing all its parts within the scope of a single directing agency, making good deficiencies, eliminating differences—eliminating first of all the idea that good statistics can ever be obtained as a mere by-product of administration. Good statistics must be planned as an end in themselves, and having in view all the purposes that statistics must serve.

General Outline of New Organization.

As was just said, the decennial census recurs at too wide intervals to render it a suitable means of registering production. Another feature militates even more strongly against it. The *raison d'etre* of the decennial census is to enumerate the population. This is an enormous task (it has been said of the United States census that it is the largest single administrative act of the government) requiring machinery of a special character. Most of all, it requires a very numerous field force, sufficient in fact to reach by personal contact, within about three weeks time, every man, woman and child of the eight millions resident in Canada. When it has reached the individual, however, the questions are for the most part of a simple and non-technical kind, so that a low-waged enumerator may be employed. Now, the organization demanded for a production census is of an almost diametrically opposite character. There are only forty or fifty thousand producing entities in Canada—outside of fishing and agriculture—so that a much more highly centralized staff may be employed. At the same time the information required is of a complex and technical character. To attempt to collect our data of mines and manufactures through the medium of the low-waged enumerators of the population census is to invite trouble from the beginning. The best such a census can accomplish (and this is all it has accomplished in the past) is to illustrate the broad and general tendencies with which public policy must deal. It cannot illuminate details, and details are more and more demanded. In the case of agriculture the situation is different, and the population census and the final and definitive census of agriculture must always for obvious reasons be taken together.

It has accordingly been decided to create entirely new machinery in the census and statistics office for the treatment of statistics of production. The decennial census of the future will be in the main a census of population, whilst production will be covered on an annual basis by a distinct organization. This organization will proceed in the first instance by collaborating with the departments, Dominion and provincial, having executive functions in specific sections of the field, (there are over 30 of these) and by erecting independent machinery only in sections outside the range of administrative supervision.

Substitute for Untrained Staff.

The desideratum in such collaboration is to place the industrial technic of the administrative departments at the service of the census, and the statistical technic of the census at the service of the departments. Many of the latter have considerable field staffs in close touch with the industries under investigation, and of expert training. These form the ideal substitute for the untrained field staff of the population census, and it will be found on other grounds that the departments are the best qualified to collect and vise the statistics in the field. On the other hand, to the census must fall the duty of bringing the departments into council and planning the inquiry as a whole, creating the nexus of association, between its parts, and generally defining methods. The census also has the larger experience in, and greater facilities for the work of compilation in machinery alone, it has in the neighborhood of $100,000 invested, and its staff is large and highly skilled in handling masses of data. (It is often popularly overlooked that when an inquiry exceeds a certain scope, it calls for a new office technic altogether.)

In brief, then, the census is the best organizer, the departments the best collectors, and the census, again, the best compiler of production statictics. A plan to unite in harmonious team-play will infringe on no one's activities, but will rather increase them by directing them into the most advantageous channels. Duplications will vanish, and the saving from this alone will cover many of the gaps which exist under the present go-as-you-please regime. There is a large field where the census must act alone,—not more than 20 per cent. of production outside of agriculture gets any record at present. Here the census will proceed by correspondence and employ a field staff only in the final stages; this staff will be its own and will be of trained men.

With this by way of statement of principles, it may be of interest to note just how the field breaks up under the scheme and how far the organization has been effected to the present. The work of organization is not finally completed, but it has progressed so far as to make a beginning on the new basis possible with the present year and to render therefore a description of it useful.

As to Agriculture.

Our great and fundamental industry offers one of the best examples we have of past statistical malpractice. Originally the decennial census furnished the only agricultural statistics. They were comprehensive, but they were slow in appearing, and of course as *annual* return in agriculture is a *sine qua non.* To supply the deficiency, the provinces "set up shop" for themselves. The Dominion, also, in 1908, began the issue of annual and even monthly statements. The latter acquired an added importance later when Canada became an adherent to the International Institute of Agriculture at Rome. To supply them, a somewhat extensive organization was created, provincial methods being found so completely at variance that co-ordination was impossible. Hence a dual series of reports and estimates arose—an exasperating spectacle to traders, and a source of endless friction among officials.

It may be said frankly that neither Dominion nor provincial authorities have had occasion for satisfaction in their annual agricultural estimates. The crucial points in a scheme which must product results in anticipation of marketing are the areas sown to the several crops and the number of live stock on farms in the month of June. Applying to the former the average yields per acre at harvest, the total crop is obtained. The method generally in use for securing the June data was by means of estimates from correspondents all over the country as to the percentage increase or decrease compared with the preceding year. This, notwithstanding that it has had the adherence of the United States for sixty years, is faulty, for it provides no really solid foundation; moreover, its errors tend to become cumulative.

What is required instead is a series of actual returns from individual farms—as many as possible—so that the estimate may rest on fact. Ontario early recognized this and adopted the plan of circularizing the individual farmers instead of working through correspondents; the percentage of returns, however, had fallen so low that results were impaired in the application. British Columbia also was able to keep in somewhat closer touch with actual conditions.

The difficulty lies in reaching so large a number of individuals. There are 700,000 farms in Canada. A conference between the census and the provincial agricultural departments was held in 1914, but it was not until 1916 that a plan was arrived at. After a thorough canvass of ways and means it has appeared to the majority that the best avenue to the farmer for such a purpose lies through the rural school teacher. The school is ubiquitous, and the work of distributing and collecting a simple card annually through the schoolchildren fits in well with educational work. The matter has gone beyond theory, Quebec, Saskatchewan and Alberta having tried it last year with marked success.

Briefly the method is as follows: A card, previously agreed upon, is printed by the census. The proper number is shipped to the provincial department of agriculture. The latter in co-operation with the department of education, forwards them in bundles of 25—40 to the rural school teachers, who have been previously advised and coached in the work. A statement in simple language to be read to the children is enclosed. The teacher then distributes the cards through the children, making the whole a school exercise and a lesson in public service, as well as in agricultural education. In Saskatchewan, some 70,000 cards were sent out in this way last year and 36,000 received back, a percentage which places our knowledge of the agriculture of Saskatchewan on a fairly safe basis, especially for a first attempt.

The cards on their return to the provincial capital were first sorted by districts, then forwarded to Ottawa for compilation, and finally made the basis of an estimate by the census and the province in consultation. The maritime provinces will adopt the same method in 1918. Ontario, Manitoba and British Columbia incline to the plan of mailing the card to the individual farmer, the rest of the process to be substantially as described. The main point is, that beginning with 1918 we shall have annual statistics of agriculture for the whole of Canada on a uniform and sound basis, the various official agencies contributing their quota of assistance, and conflicting results being a thing of the past. The annual statistics even when perfected will necessarily contain a medium of estimate, but the decennial census will correct this, and no recurrence is expected of a situation like that of Saskatchewan in 1916 when both province and Dominion were found to be "out" nearly 30 per cent. in their acreages for wheat. Similarly the monthly reports on conditions the year round as between the census and the provinces will be brought into harmony. The decennial census of agriculture, it may be added, will be taken by improved methods, a schedule to each farm.

Statistics of Dairying Industry.

Dairy factories may be regarded as an appendage to farming. The provincial dairy commissioners are in close touch with the field; most of them have instructors or inspectors who visit personally every dairy factory once, twice or oftener a season. To secure the statistics of these establishments adequately and without friction and duplication, the following plan has been adopted: First, a common form has been agreed upon. The census prints this and supplies a sufficient number to each provincial dairy branch. The latter, through its field staff, collects a return from each establishment. These, after vising, are forwarded to Ottawa for compilation.

Immediately the latter is effected for a province, the results are sent back for use in any way deemed expedient. The census publishes the report for the whole of Canada, with the editorial assistance of the Dominion dairy branch, and we thus obtain a single coherent return, impossible of contradiction, and as comprehensive and accurate as official machinery can make it. Quebec, which has long done excellent work in dairy statistics, prints her own schedules, which, however, conform to the general requirements. For Ontario, the census is mailing the forms to the factory operators direct, but the provincial officers supply the lists and are cooperating in the work of securing the tardy ones and in revising results as a whole. Farm dairying will be covered as a section of agricultural statistics proper above.

The sea fisheries have always been regarded as the domain of the nation at large (the right dates from Magna Charta), and only inland waters fall under provincial jurisdiction. As the lake and stream fisheries of the maritime provinces are unimportant commercially, and those of the west still remain under the Dominion, it follows that Ontario and Quebec alone, in addition to the Dominion fisheries branch, are concerned in the statistical problem. British Columbia has a fisheries branch, but it does not collect statistics.

Statistics of fisheries must cover (1) the catch, and (2) the product marketed, the latter divided into (a) fresh, (b) domestically prepared, and (c) factory-made. The men, boats, gear, etc., should, of course, be recorded, as well as the capital and other details of the smoke houses, freezers, canneries and the like. With regard to the catch, the forms of the three departments were already in substantial agreement, and the census office has accordingly adopted them with little change. For the collecting of the data, exceptionally effective machinery exists in the departmental field inspectors and overseers who between the Dominion and provincial governments bring every fishing section under direct supervision.

The Dominion officers, in fact, cover their sections monthly. When the forms are filled in for the year, they will be checked by the proper head office, compiled by the census and the results shared. Domestically prepared fish will be covered in much the same way. For the factory-made product, the several departments will join in the preparation of lists of fish manufacturing establishments, which will be circularized by the census direct on a form agreed upon, the returns to be visé-ed by the fisheries departments and compiled by the census. As to publication, the province will probably issue separately the statistics of their own territories; for the Dominion as a whole, the census office and the Dominion fisheries branch will collaborate on a report, the census furnishing the general editorial supervision—whilst the fisheries branch supplies the comments and interpretations necessary from an administrative and technical point of view.

Regarding Forestry Returns.

The forestry section includes (1) operations in the woods, (2) saw mills, (3) cooperage shops, (4) sash and door factories, planing mills, etc., (5) pulp and paper mills, and (6) wood distilleries,—from which the subject shelves into specialized wood-manufactures. For the first, Quebec and British Columbia have excellent statistics, but the other provinces record merely the cut on Crown lands, (on which stumpage dues are collected), the increasing areas of forest held in fee simple not being covered. (In Nova Scotia practically all timber lands have passed from under the Crown).

The operations of the saw mills and cooperage shops, reflect the work in the woods, their product being the logs in another form—except that they do not account for products like telegraph poles, cross ties, fence posts, etc. In the sawmilling sub-division, the census will collaborate with Quebec and British Columbia, along the lines already described, but will work alone in the other provinces. It is hoped that eventually the field staff of all the provinces will be available for the direct checking of operations in the woods and for the compiling of lists of sawmills, for which work they are so excellently adapted. For the prompt return of the pulp and paper mill returns, the Pulp and Paper Manufacturers' Association has promised its assistance. All results will be communicated to the provincial governments in advance of publication.

The Dominion forestry branch has issued for several years past a series of statistical reports on forest products. These will be continued, but will contain the statistics derived as above and under arrangements as to publication similar to those in the case of fisheries. The census office throughout the organization of this section has been in close advisement with the forestry branch with the end of subserving the latter's needs no less than its own.

Collection of Mining Statistics.

Mining statistics are perhaps the most difficult of all to arrange for, the reason being their exceptionally varied and technical character. At least five provincial departments, as well as the Dominion department of mines, have been issuing statistics for many years. All these statistics are of good quality, but the methods followed are often abruptly at variance, and they are limited strictly to the mining point of view. As to the principles which co-operation might follow, a general agreement has been arrived at between the census and the provinces. As between the census and the Dominion mines branch, an arrangement has been made for the present year, whereby the forms and machinery of the latter will be used to cover mining production, whilst the census will independently secure the other data of the inquiry. The arrangement is not considered final, but it at least prevents the same government asking the same concerns twice for the same information. For future years a plan of complete co-operation, including Dominion and provincial authorities, is aimed at. It is felt by all that such co-operation, is feasible and well worth the difficulties of organization which it involves.

Hydraulic and Other Power Plants.

Another important section under dual control statistically consists of plants for the manufacture of electric current. There are two kinds of these, namely, hydraulic power plants, whose product is merely the transformed "white coal" of our waterfalls, and those making power through a combination of coal, gas, or oil fuel. The first alone are matters of direct administrative concern, but the second are so closely allied that the subject must be treated as one. The Dominion water power branch, the Ontario hydro-electric power commission, the Quebec streams commission, and the water power commission of Nova Scotia divide the administrative field. In collaboration with the census, these bodies have agreed upon two forms (the conservation commission being also consulted) which it is thought will illustrate the main features of power production and which can be varied from year to year over the entire range of the subject. They have united also in the preparation of lists of plants. The forms will be sent to these direct by the census (except that the hydro-electric commission of Ontario will collect from the 250 plants now under its control). The compilation will be made by the census office, and the country will have a single series of statistics by provinces. For the Dominion as a whole, the bulk statistics may be issued in a separate volume accompanied by some of the details as to the organization of individual companies (edited by the water power branch), which make a work like Garcke's "Manual of Electrical Undertakings," so valuable a handbook in its field.

An "electrical industries" group will ultimately be added, including telegraph, telephone and signalling companies.

General Manufactures.

There remains the large and complicated field of general manufactures in which little or no statistical work has been done, save by the decennial census or by intervening postal censuses like those of 1905 and 1915. These statistics will now be collected annually. The problem consists first in securing the names of going concerns. Every known source will be exploited for these—directories, gazeteers, commercial agencies, boards of trade, manufacturers' associations. Among governmental departments, the factories inspection branches and workmen's compensation boards can help materially in this connection. The concerns will then be circularized under the Census Act, which holds the delivery of a schedule by registered letter to constitute an inquiry within the law. Some field work will be necessary; this will be done by a small staff of experts. About seventy different forms will be used—one for each distinct group of industries. All previous censuses of manufactures were taken on a single form, a procedure which made it impossible to call for specific data on such points as equipment, raw materials and products. It is now hoped to get complete statistics for about four thousand named products.

Office Organization.

Mention was previously made of the office organization required for a large inquiry like the present. This has been carefully thought out and rehearsed. Every concern has been assigned its place in a classification scheme that includes 399 divisions. Each concern is card-catalogued and given an office number—by which alone it is known to the clerical staff, thus ensuring the secrecy of the individual returns. There are about 60,000 names on the catalogue. The technic for sending out the many overlapping and inter-related inquiries has been provided. The returns will come back often at the rate of two thousand a day, and arrangements have been made that they may be checked, edited, the complete ones sent to the compiling machines, and the incomplete placed in the way of correction on the day they are received. The average clerical staff will number fifteen, but this will rise to twenty-five in the months of pressure, dropping back to eight or ten at other times. For the compilation of the agricultural section, which falls to be done in July, a special temporary staff will be employed. It should be added that the production census as above described will by no means represent the sum total of information that we may desire to have of our industries. It will, however, provide the basic data, from which other and special inquiries can be built up from time to time as occasion points the necessity. Especially will it provide the organization by which such inquiries can best be handled.

How the Production Census will be Published.

Beginning with 1918, then, we shall have an annual census of production in Canada which will appear in nine volumes, as follows:—

Volume I.—Agriculture—Field Crops and Live Stock.
Volume II.—Dairying.
Volume III.—Fisheries.
Volume IV.—Forest Products.
Volume V.—Mines.
Volume VI.—Central Power Plants.
Volume VII.—General Manufactures.
Volume VIII.—Directory of Producing Concerns.
Volume IX.—General Summary of Production.

These may be broken into smaller sections as desired, and brochures on live stock, pulp and paper, textiles, etc., etc., issued. With regard to cost of printing, it may be pointed out that the scheme involves but little increase on present methods. Volume I will be virtually a reprint of the January issue of the Monthly Census Bulletin of Agricultural Statistics. Volume VI. and VII. will be new, but Volumes II., III., IV. and V. are already appearing, though not in coordinated form. Volume VIII. is suggested in view of the daily inquiries that are now received for lists of concerns manufacturing specified products and which can be answered only by the expensive method of making transcripts from the card catalogues. Volume IX. would consist of a reprint of the production section of the Canada Year Book.

As remarked at the outset, the role of Canada for the next half century at least must be that of a producer. Our economic status, on which so much of our social and even political future depends, will be according to the measure of our production. With a scheme of production statistics similar to that which has been outlined, but improving with time, it should be possible for the statesman to keep his finger on the pulse of this governing factor in Canadian development in a way hitherto impracticable.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Aurora, Ont.—February 4—Factory of Office Bureau Company, Limited was destroyed.

Chatham, Ont.—February 2—Residence of Mrs. John Northwood was damaged.

Gananoque, Ont.—February 3—Interior of the Gananoque High School was destroyed.

Hamilton, Ont.—February 2—Miss Wilcox's drygoods store, and property of Alex. Gardener were damaged. Caused by defective chimney. Estimated loss, $500. Maxwell Agency garage damaged. Estimated loss, $1,500.

Kingston, Ont.—February 1—Home of James Harris was destroyed. Caused by rats carrying rat poison near hot water pipes, causing phosphorus in the poison to burst into flame.

London, Ont.—February 5—Barnes' Hotel was destroyed.

Moose Jaw, Sask.—February 1—City Hotel was destroyed.

North Toronto, Ont.—February 4—Residence of John McGregor was destroyed. Estimated loss, $1,500.

Parry Sound, Ont.—February 5—Queen's Hotel was destroyed.

Quebec, Que.—February 2—The Quebec stockyards were destroyed. Estimated loss, $150,000.

Renfrew, Ont.—February 5—Block belonging to Mr. W. T. Guest was destroyed. Estimated loss, $20,000.

Sorel, Que.—February 6—Block of stores and houses was destroyed. Estimated loss, $100,000. Fire commenced at back of J. P. Paul's grocery store, spread to C. Lord's barber shop, thence to H. Dallaire's plumbing establishment and to confectionery store of A. Gianoutses. The foundry of La Cie d'Entreprises Metallurgiques was badly damaged.

Stratford, Ont.—February 5—Home of R. J. Walsh was damaged. Caused by thawing out frozen pipes. Estimated loss, $400.

Toronto, Ont.—February 1—Residence at 35 Queen Victoria Avenue, owned by the National Trust Company, was damaged. Estimated loss, $250.

February 2—Home of Chas. Saba was damaged. Caused by overheated furnace. Estimated damage to building, $200; to contents, $200. Ambulance of the Toronto General Hospital was damaged. Estimated loss, $300.

February 3—Toronto Shipbuilding Company's plant damaged. Estimated loss, $1,000.

February 4—Rosedale station of C.N.R. was destroyed. Caused by defective wiring. Estimated loss, $6,000. Insurance carried on contents, $3,000; on building, $3,000.

February 5—Metropolitan Railroad Company's car barns and four coaches were burned. Caused by ignition of cane seats from electric heater. Estimated loss, $40,000. Toronto Laundry Machine Company's plant destroyed. Caused by ignition of resin fumes. Estimated loss, $175,000.

Winnipeg, Man.—February 1—Canadian Pacific Telegraph block was destroyed. Estimated loss, $500,000. Chevrier and Son, furriers, had a stock valued at $200,000, while other tenants carried between them $100,000 worth of goods.

February 5—Riverview Hotel, Lauren Block and adjoining buildings were destroyed. Estimated loss, $180,000.

TORONTO MORTGAGE COMPANY

There are several indications in its latest balance sheet of a further improvement in the already strong position of the Toronto Mortgage Company. One of the outstanding features is the substantial state of the reserve fund, which, with $30,000 added to it last year, now totals $590,000, or 81 per cent. of the paid-up capital. The funds of this reserve account are all invested in gilt-edge securities, largely in government and municipal bonds.

The company's profit and loss account shows that interest of $67,483 was paid on sterling debentures and $12,309 on currency debentures. The company has $1,368,749 of the former and $251,467 of the latter class of debentures. The interest paid on deposits last year was $3,746. There are savings accounts deposits of $128,555. The cost of management was moderate, amounting to $21,072. This includes the tax on capital and the business tax. Special war taxes and subscriptions, amounting to $4,203, to Patriotic fund were paid last year. As noted above, $30,000 was transferred to reserve fund. Dividends at the rate of 8 per cent. were paid on capital stock, and accounted for $57,964 of the profits. There was a balance of $37,871 carried forward.

The statement of assets shows mortgage loans of $2,172,333. The interest on investments and net rental from office premises last year amounted to $203,838. It is eloquent testimony to the management and direction of the company's affairs that for the eleventh year in succession the company last year had no properties for sale on its books as a result of defaults in payment. A notable record was made in 1917 in the collection of interest. Ninety-nine per cent. on mortgage account had been received by the night of December 31st. Of the remaining 1 per cent., only $299.07 was outstanding at the time of the company's annual meeting on Wednesday.

Government and municipal bonds and stocks owned by the company are valued in the assets at $657,367. There are call loans on stocks and bonds of $145,682. A substantial sum of cash stands to the credit of the company with various banks. This, with a small amount in the office, exceeds $120,000. The office premises are valued at $45,000. Mr. Walter Gillespie is manager of the company, and has also been elected a director, in succession to the late Sir Mortimer Clark. Mr. Gillespie and his fellow-directors and the company's clients have every reason to be satisfied with the company's position and the result of the past year's operations.

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times* as follows:—

CORPORATE TRUSTEES

The day of individual trustees has almost passed. The history of the administration of estates has demonstrated that the only safe way is to employ a reputable trust company. The cost is almost nominal and the service given is excellent. Mr. A. D. Langmuir, general manager of the Toronto General Trusts Corporation, pointed out at the company's annual meeting this week the advantages of the corporate trustee's continuous application of the best methods, its systematic conduct of business on principles settled and approved by a wide and growing experience, the facilities due to its great connection, and its capacity to apply a sound judgment. Such a corporation claims special and marked advantages over any individual, private executor or agent however responsible. "Every difficult or important question which may arise," said Mr. Langmuir, "whether in the management of estates, in the investment of moneys or in any other part of the corporation's business, is carefully considered and disposed of by a trained executive, in close touch and counsel with a board of directors composed of financial, commercial and legal men of ability and standing in the community."

In the case of individual executors and trustees, many require to seek outside assistance and advice in the care and management of trusts committed to their charge, often entailing expense and delay; whereas, with the corporate trustee the responsibility is shifted to experts trained for the performance of just such duties. There is no sound argument in favor of the individual trustee. As Mr. Langmuir reminded us, the allowances to a trust company are not different from those made by the courts to an individual executor and trustee. Companies have no fixed tariff of fees, and if they had such a tariff, it would be optional to the beneficiaries of estates, if they were dissatisfied with the charges, to have the accounts of the estate referred to the courts for the purpose of determining what the charges should be.

CENSUS STATISTICS

On another page, Mr. R. H. Coats, Dominion statistician and comptroller of census, outlines the important changes which are being made in regard to the taking of Canada's census. Every ten years a comprehensive census of industry has been taken by the authorities at Ottawa but the statistics of production have been of little value, a decennial census recurring too seldom to render it as a suitable register of production. Again, the chief aim of the decennial census has been to enumerate the population and this has been done with a field force of enumerators who were not highly paid. The information required for an industrial census is complex and technical and a well-trained staff is required to gather it. Reliable statistics in Canada have been inadequate. The value of those obtained was largely lost by their rare appearance, by inadequacy of detail, by delay in publication, and by differences between the figures gathered for the provincial and federal authorities.

It has now been decided to unify the system by bringing all its parts within the scope of a single directing agency, making good deficiencies, eliminating differences —eliminating, first of all, the idea that good statistics can ever be obtained as a mere by-product of administration. As Mr. Coats says: "Good statistics must be planned as an end in themselves, and having in view all the purposes that statistics must serve." He points out that the desideratum in such collaboration is to place the industrial technic of the administrative departments at the service of the census, and the statistical technic of the census at the service of the department. Many of the latter have considerable field staffs in close touch with the industries under investigation, and of expert training. These form the ideal substitute for the untrained field staff of the population census, and it will be found on other grounds that the departments are the best qualified to collect and vise the statistics in the field. On the other hand, to the census must fall the duty of bringing the department into council and planning the inquiry as a whole, creating the nexus of association, between its parts, and generally defining methods. The census, adds Mr. Coats, also has the larger experience in, and greater facilities for the work of compilation in machinery alone, it has in the neighborhood of $100,000 invested, and its staff is large and highly skilled in handling masses of data. It is often popularly overlooked that when an inquiry exceeds a certain scope, it calls for a new office technic altogether.

A perusal of Mr. Coats' article will demonstrate the great improvement we are to have in regard to the collection, tabulation and publication of our national statistics. There may be room for still further improvement but such opportunities will undoubtedly be noted by Mr. Coats, whose ability and enterprise as Dominion statistician have been well proved.

MONTREAL'S GOVERNMENT

Those who have had at heart the best interests of the city of Montreal will be gratified at the decision to place the government of the city with a commission. This commission will be composed of the chief city attorney, the comptroller and auditor, the city treasurer and two other members to be named by the lieutenant-governor-in-council. The last two will be named for four years and the first three for life unless they cease to work for the good of the city of Montreal. The city council of mayor and twenty aldermen will be retained but with reduced powers. The commissioners will sit in the city council and have votes. The reports of the commissioners can be rejected only on a two-thirds or three-quarters vote of the aldermen. The board of control will be abolished.

These are steps in the right direction. As Sir Lomer Gouin, premier of Quebec, stated last week to the private bills committee of the provincial legislature, the city of Montreal is at the commencement of its development and will be one of the greatest cities in the world. It must have a business-like and honest administration. Its credit must be raised to a high plane. Sir Lomer truly said that it is necessary for a city, as for an individual, to have not only assets and hopes, but also good credit. Montreal has substantial assets and a great future. It possesses capital, but it is necessary that the city should acquire better credit.

There will continue to be a mayor of the city. The premier of Quebec was asked last week what the mayor's powers would be, and replied to the effect that the mayor would occupy the very dignified position of representing the city in the city and outside, to receive visitors, "like the Lord Mayor of London," as Sir Lomer put it. The comment of comical Mayor Martin, of Montreal, is reported to have been, "I leave Quebec and I will never come back," which, of course, is more or less of a disaster.

DOMINION PERMANENT FAILURE

The failure of the Dominion Permanent Loan Company once again directs attention to the necessity for greater supervision. The majority of debenture holders and depositors have little knowledge of their company's investments. The balance sheet shows a solvent and satisfactory position. The management and directors exchange compliments at the annual meeting, which is attended by comparatively few. Even if questions are asked regarding some point or other, a way is usually found to lull the inquiring mind. Confidence in the company's affairs is gained and bolstered by the names of directors which are supposed to give the impress of stability. The chief investment of the Dominion Permanent Loan Company is reported to be in a railroad between Grand Forks in British Columbia and the town of Republic in the State of Washington, and apparently a "white elephant." The experience of the company is another reminder that enough has not yet been done to prevent such failures. Too much is taken for granted in the average company's balance sheet. Sufficient detail is not demanded by the authorities nor is sufficient knowledge obtained as to actual nature and condition of investments. The balance sheet does not always reveal the true story.

Canadian loan companies generally have enjoyed a remarkable record for sound financial methods. Failures have been very few. The debentures of these companies are properly regarded as excellent investments. The funds of depositors and shareholders have usually been well safeguarded. The effect of the failure of the Dominion Permanent should be to provide satisfactory safeguards for the protection of investors in weak companies, if any, at the same time automatically supporting the many strong loaning companies we have in Canada.

GUARANTEE BONDS

A treasury board regulation prevents the acceptance of anything but a cash security in connection with contracts for the Public Works Department of Canada. This department cannot accept a guarantee bond, an instrument which has become an important factor in modern business. Considerable inconvenience is caused to contractors and others by the requirement of substantial cash security for the performance of certain work. Large sums of cash deposits lie idle when they might be employed profitably. The majority of public bodies in Canada are satisfied with the guarantee bond, furnished by reputable companies which make a specialty of the business, and which bond provides security for performance of contract. What is the reason for the treasury board's regulation?

There is keen competition among the grain shippers along the line of the Grand Trunk Pacific Railway in western Canada for the honor of handling the record single carload of wheat. This distinction was claimed a few days ago for Mr. R. A. Aykroyd, who shipped a carload of No. 1 northern from his farm, a few miles north of Wainwright, Alberta, which brought $3,571, after allowing for the deduction of freight charges. This record did not stand long, another shipper having a carload which brought $3,903, and even this figure has now been surpassed. Canadian government car No. 26923, from Irma, Alberta, on the Grand Trunk Pacific line, carried 2,063 bushels of No. 2 wheat, amounting in value to $4,195.

Andrew Bonar Law, chancellor of the exchequer, announced in the Imperial house of commons on Tuesday, that a committee of bankers and merchants had been appointed to report whether state interference is necessary in the case of great bank amalgamations which are taking place. There have been several of these amalgamations recently, the latest being that of the London County and Westminster Bank and Paris Bank, which led adverse critics to doubt whether they are good for the public welfare. It is contended by these critics that such combinations are steadily placing credit facilities in a small number of hands, and that this will adversely affect the independent business community.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

While the gross earnings of the Toronto Railway Company last year showed a gain, the net earnings were substantially decreased. Higher operating costs were the cause, the company having had to meet a higher scale of wages and at the same time an advance in the prices of all classes of materials. The decrease in net earnings would have been still larger had it not been that the company was called on to pay the high scale of wages for only a portion of the year, but the company will have to meet them, however, during the entire period of the new fiscal year. The wage increase is apparently making such deep inroads in the earnings of the company that the directors refer particularly to it in their report, and point out that the Toronto Railway is now paying a higher scale than is paid for similar work in United States and Canadian cities. The majority award of the Arbitration Commission gave the men 37 cents an hour, maximum rate. Owing to the scarcity of labor and war conditions, the directors reluctantly decided that they had no other course than to accept the award, although it meant an increase in operating expenses of about $600,000 per annum. The directors felt that the award was not warranted by weight of evidence submitted to the Board of Arbitration; that it was not justified by a comparison with the rate of wages paid for similar work in United States cities, and was not warranted by the earnings of the company, and that it was essentially unjust to the shareholders.

The gross earnings for the year amounted to $6,291,759, compared with $5,973,161 in the previous year, a gain of $318,597; operating expenses required $3,815,277, as compared with $3,350,657, an increase for the year of $464,619. This resulted in net earnings of $2,476,481 down from $2,622,503 in the previous year, a decrease of $146,022. From the net earnings the following appropriations were made: Payments to the city of Toronto, percentage on earnings, $970,512.41; pavement charges, $98,840.80; general taxes, $117,678.11, a total of $1,187,031. The company's fixed charges in the way of bond interest, etc., required $146,887, and dividends $960,000, making a total of $1,106,887. These disbursements made a total of $2,293,918, and left a surplus to be carried forward for the year of $134,809.87 The accumulated surplus carried forward from previous years amounted to $5,408,873, and when the surplus for 1917 was added to it the company carried forward a total surplus of $5,543,683. The gross passenger earnings show an increase of over $315,000, compared with the previous year. The percentage of charges, etc., to passenger earnings amounted to 61.5 per cent. up from 57 per cent. in the previous year, an increase of 4.5 per cent. The payments made to the city of Toronto totalled $1,187,031, representing an increase for the year of $74,021.57. The total payments being made to the city are now over $80,000 above the company's bond interest charges, and total disbursements to shareholders.

The seventh drawing of the company's currency and sterling bonds, under the terms of the mortgage deed, dated September 1st, 1892, took place on June 1st. Under said terms the company draws annually during the last ten years of its franchise, 5 per cent. of the amount of bonds issued, thus reducing during the ten years mentioned to 50 per cent. of the original issue, and all bonds so drawn are to be redeemed on and after August 31st, following the date of drawing. There has been drawn to date a total of $1,592,519.

Dominion Bridge Company.—The minimum price on Dominion Bridge has been reduced to 123, compared with the minimum of 128 placed on that issue in October last. This action is the result of the decision of the directors of Dominion Bridge Company to reduce the dividend from 10 to 8 per cent.

Riordon Pulp and Paper Company, Limited.—A quarterly dividend of 1½ per cent. at the rate of 6 per cent. per annum, and a bonus dividend of 1 per cent., has been declared on the common stock of the company for the fourth quarter of the year 1917 payable February 15th, 1918, to shareholders of record at the close of business on February 11th, 1918.

Ontario Power Company.—The Bank of Montreal has advanced $250,000 to the Ontario Power Company of Niagara Falls. Proceeds will be used in part to construct a pipe line and to install turbines and generators in the plant at Niagara Falls, costing $1,800,000. The remainder of the amount needed will be financed out of the surplus. The company expects to pay the money borrowed in two years.

Adanac Silver Mines Company.—The annual meeting of shareholders will be held on Thursday, February 14, at noon, and for the same day and hour a special general meeting will be called for the purpose of ratifying a by-law providing for an increase in the authorized capital from $2,500,000 to $3,000,000. Arrangements have already been made for the sale of a block of the new stock to provide funds to carry on development for at least nine months.

Ottawa Traction Company.—At the annual meeting of the company at Ottawa, gross earnings of $1,240,627 were reported. The operating expenses and maintenance amounted to $705,338, leaving net earnings of $535,289. The increase in net over 1916 was $50,724. During the year 29,347,692 passengers were carried compared with 27,033,778 in 1916, an increase of 2,313,914. The balance at credit of profit and loss account is now $267,590. The usual quarterly dividends of 3 per cent. were paid throughout the year and a bonus of 3 per cent.; also the business war tax $40,615 and $110,000 set aside for depreciation. Three new P.A.Y.E. cars were put in service during the year, an improvement which cost about $50,000.

Canada Steamships Lines.—The St. Lawrence River boats of the company will be assured of sufficient supply of coal through a contract signed with a new corporation organized by Canadian financiers. Ogdensburg despatches state that a Canadian shipping syndicate has purchased control of the Ogdensburg Coal and Towing Company. Two corporations will be formed, one capitalized at $200,000, to continue business at Ogdensburg, and the other will be capitalized at $1,000,000 with head office in Montreal. W. L. MacDougald, of Montreal, has been appointed president and general manager of both companies. It has been arranged to supply fuel to vessels of the Canada Steamships Lines plying on the St. Lawrence route.

Abitibi Power and Pulp Company.—The annual general meeting of the company will be held in Montreal, February 11th, and immediately following a special general meeting will be held for the purpose of considering and, if deemed advisable, approving of by-law XIX. cancelling the preference and privileges of unissued $1,000,000 of the capital stock of the company. The report of the production of the company for the last three months of 1917 is as follows: Paper 16,736 tons; ground wood pulp, 7,057 tons, sulphite pulp, 2,515 tons. According to the general manager, H. Wilson, this output is about the same for paper as in 1916, but the production of pulp is nearly double that of the previous year, as during 1917 the capacity for pulp making was doubled and the mills are running well up to capacity. It is expected that for the next three months there will be a falling off in the production of pulp, but that the paper production will remain about the same. The mills have been exporting most of their output to the United States.

Howard-Smith Paper Mills.—The company, which brought its fiscal year to a close on December 31st last, had a most successful year. During the 12 months the production at the Beauharnois plant was very considerably increased. The company is now making at that point a high quality of tub sized and loft dried bond papers, and has succeeded in establishing its brands generally throughout Canada. It has been able to stop the importation of these papers to a very large extent. The company has also been successful in working up some export business, which it is believed will increase. The mill at Crabtrees, Que., has been rebuilt, and to it has been added a new beater room and finishing room. There is being constructed in this connection a new dam, and there is being installed a hydraulic turbine. It is expected to have

this new turbine installed within two months, when the mill will start up making sulphite bond papers. The volume of business transacted during 1917 was considerably greater than 1916, and is expected to be still larger in 1918.

Montreal Tramways Company.—In the contract prepared by the tramways commission for the city and the company, providing for a franchise of 35 years and signed by representatives of both, as submitted to the Quebec legislature on January 30th, there are important changes made in the conditions under which people in Montreal will shortly travel from point to point. To obviate the incessant bargaining and bickering between the city and the company, a permanent Montreal Tramways Commission is to be created, with jurisdiction over all the lines of the Montreal Tramways Company, or any of its subsidiaries, so far as finances, operation, extension and disputes are concerned.

The features of the new franchise are as follow: Contract to run 35 years. Autobus system authorized for city and outside. Capitalization fixed at $36,286,295. Commission to keep control of finances, expenditures and operations of the company. Fares reduction fund to be established and fares to be reduced as often as this fund is sufficiently large. City to have the right of expropriation after March 24, 1953. New double track car lines to be opened up, especially in north end of the city. No dividends over 10 per cent. to be paid by the company in any year. Transportation of freight, garbage and snow provided for. Company to permit employees to organize labor unions. Car fares to be fixed by new tramways commission. Agreements between company and outside municipalities incompatible with the new contract are cancelled. Transfer points to be punched on transfers. City to receive fixed sum of $500,000 annually. Surplus fund to be divided, 30 per cent. to city, 20 per cent. to company and 50 per cent. for reduction of fares.

International Nickel Company.—The company's report covering operations for nine months ended December 31, 1917, compares as follows:—

	1917.	1916.
Gross earnings	$11,797,235	$12,628,496
Other incomes	324,228	216,324
Total income	12,121,463	12,844,820
Ad. and general expenses	452,755	994,896
Reserve and taxes	3,680,741	....
Net	7,987,967	11,849,924
Depreciation, etc.	1,398,337	1,495,448
Balance	6,589,630	10,354,476
Preferred dividends	401,067	401,066
Common dividends	4,183,460	5,020,152
Surplus	2,005,102	4,933,258

After dividends on the preferred stock, the balance available for the $41,834,600 common stock ($25 par value) was equal to $3.10 a share, against $5.94 a share in the same period of 1916. The balance sheet for the nine months ended December 31, 1917, compares with the same period in 1916 as follows:—

Assets.

	1917.	1916.
Property	$47.792.420	$44,622,676
Investments	2,380,811	2,995,244
Inventories	7,176,182	4,864,582
Accounts and bills received	2,900.732	2,830,568
Loans	15,000	515,000
Certificates of deposit	2,030,000	2,030,000
Cash	2,527,816	3,372,743
Totals	$64,822,961	$61,230,815

Liabilities.

	1917.	1916.
Preferred stock	$ 8,912,600	$ 8,912,600
Common stock	41,834,600	41,834,600
Accounts payable	5,845,602	1,922,700
Preferred dividend	133,689	133,689
Insurance funds	232,609	199,773
Surplus	5,858,759	3,294,195
Profit and loss	2,005,102	4,933,258
Totals	$64,822,961	$61,230,815

Hollinger Consolidated Gold Mines, Limited.—The second annual statement of the Hollinger Consolidated Gold Mines, Limited, is the seventh annual report of the Hollinger Gold Mines, Limited. The merger which took place early in 1916 brought into combination the Hollinger, the Acme, the Millerton properties, and claim 13,147, the three latter formerly belonging to the Canadian Mining and Finance Company. The merger resulted in a corporation with a capital of $24,600,000 and an output in the year 1917 of 508,130 tons of milled ore, of a value of $4,261,938.

The enterprise, which began as a producing proposition in 1911 with the milling of 1,000 tons of ore, at the end of last year had milled 1,950,000 tons, of a value of $19,728,000 In that period there has been distributed to shareholders $8,194,000.

The Hollinger in 1917 disbursed $738,000, as against $3,126,000 paid in 1916. The deficit of $269,590 which stood on the books at the beginning of 1917 has been wiped out, and a surplus of $713,724 has taken its place. Expenditures on plant amounting to $673,000 were made, $131,224 was charged to capital development, and $100,000 written off plant for depreciation. A programme of larger development, permitted by the use of earnings for this purpose instead of paying dividends, made possible the exposure of $10,300,000 of new ore. Although 508,000 tons of ore carrying values of $4,373,000 were removed in 1917, managing director Robbins estimates an increase in ore reserves from $34,185,000 to $40,231,000.

The plant, which is capable of handling 2,500 to 2,800 tons of ore daily, and which has cost over $3,000,000, is completed and paid for, and that, as a result of the expenditure of $1,300,000 upon development, ore reserves of $40,000,000 are reasonably certain. There is a surplus of $712,724, which may be considered to be made up entirely of cash, bonds, debentures and bullion, as the current assets and bullion, amounting to $1,037,168, exceed by $798,292 the current liabilities of $238,875. The report of the managing director shows a revenue of $4,261,938 from gold and silver produced in the year. This was disposed of as follows:—

General charges	$ 235,542
Mining charges	1,503,146
Milling charges	523.022
	$2,261,711
Depreciation	100,000
Taxes	184,134
Donations	5,100
	$ 289,234
Paid out in dividends	738,000
Added to surplus	982,314

The company added to surplus in the last year some $44,000 more than was paid out in dividends.

Canada Iron Foundries, Limited.—A substantial increase in sales and earnings in 1917 permitted a further strengthening of the position of Canada Iron Foundries, Limited, successor to Canada Iron Corporation, which went into liquidation about four years ago. The reorganized company, in its second annual report, submitted to shareholders on January 31st, reported an increase of 44 per cent. in the year's sales, which make the total for the 12 months ended September 30th last about $2,849,000, against $1,979,933 the previous year. Earnings are stated in a different form, charges for repairs and renewals and also administration expenses being charged up before showing earnings, instead of being shown in a separate account. If allowance is made for the change, the foundry earnings for the year, amounting to $528,097, compare apparently with $337,692 in 1916. Including $14,160 earned as interest, discount, etc., the net revenue of the year was $542,257.

The entire revenue was devoted, apart from the payment of interest and sinking fund, on A debentures, amounting to $36,281, to strengthening the position of the company. By resolution of the B debenture shareholders, passed recently in London, the company was authorized to carry its inventories of raw material, supplies and manufactured products at pre-war prices until one year after the termination of the war. This necessitated the appropriation of $229,819 out of the year's profits. A similar appropriation of $86,866 was made out of the accounts as of September, 1916, and the reserve of $150,000 then created for the purpose was cancelled. After deduction of $135,615 for depreciation on foundry buildings and machinery, providing for A debenture interest and the maintenance of non-operating plants, the balance of earnings for the year was $105,422. This amount was appropriated toward the cost of the renewal of the company's foundry at Three Rivers.

BRANCHES AND CONNECTIONS THROUGHOUT CANADA

The substance of the foregoing is that approximately $469,000 went from earnings last year to improve the company's position through allowances for depreciation, writing down, etc. One of the furnaces at Midland was sold for $325,000, and since the close of the year the money has been received by the trustees and applied to the redemption of A debenture stock. The balance sheet reflects the recent conservation of earnings. Current assets foot up $1,217,948, with current liabilities only $136,531. The main features of the balance sheet compare as follows:—

Assets.

	1917.	1916.
Properties	$5,966,253	$6,201,998

Net earnings	65,300	823,800	— 758,500
Aggregate gross earnings from July 1st	3,335,100	6,296,100	— 2,961,000
Aggregate net earnings from July 1st	3,335,100	6,296,100	— 2,961,000

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Chatham, Ont.—The total loss for 1917 was $1,262. The value of the property risk was $2,000,000.

Guelph, Ont.—January 27—Drygoods store of C. B. Ryan and Company was destroyed. A total insurance loss of $90,000 was divided among the following companies: Hand-in-Hand, $5,000; Queen City, $5,500; Hartford, $5,000; Wellington, $2,500; Gore, $5,000; Queen, $5,000; Liverpool and London and Globe, $2,500; Western, $2,500; North British and Mercantile, $5,000; Phœnix of London, $5,000; Merchants, $2,000; Scottish Union, $6,500; General, $2,000; North Western National, $,2500; National-Ben Franklin, $1,500; Norwich Union, $4,500; Liverpool-Manitoba, $2,500; London Assurance, $5,000; Ætna, $4,000; Guardian, $8,000; Waterloo, $4,000; Economical, $2,000; Sun, $2,500.

Joliette, P.Q.—January 24—A loss of $52,500 was involved when St. Viateur School was destroyed. A total insurance loss of $72,700 was divided among the following companies: British-America, $10,000; Sun, $7,000; Law Union and Rock, $4,000; Norwich Union, $2,000; Atlas, $3,000; North British and Mercantile, $6,000; Guardian, $1,800; Commercial Union, $6,900; London and Lancashire, $7,000; Alliance, $7,000; Queen, $5,000; Royal, $4,000; Union of Paris, $4,000; Liverpool and London and Globe, $5,000.

Peterborough, Ont.—January 27—A total insurance loss of $150,000 was caused when R. Neill's boot and shoe store was destroyed. The following is a partial list of insurance: Phœnix of London, $87,000; Nationale, $2,500; Norwich Union, $2,500; Hand-in-Hand, $5,000; Wellington, $1,000; Guardian, $5,000; Alliance, $5,000; Mount Royal, $2,500; Law Union, $1,000; Ocean, $20,000; Sun, $2,500; Queen City, $1,000; Perth Mutual, $2,500; Western, $5,000; London Mutual, $2,500; Dominion, $2,500; Ætna, $2,500. In addition to the above loss the Royal Theatre, the Matthews-Blackwell store, the Dominion Bank and the Masonic Hall, adjoining the Neill store were damaged.

Toronto, Ont.—Statistics of the fire department show a considerable decrease in total fire losses during the year of 1917 compared with the previous year. The losses on both buildings and contents not covered by insurance shows a large increase. Last year the loss on buildings not covered by insurance was $10,352, compared with only $3,289 in 1916. Loss on contents with no insurance last year amounted to $19,606, compared with $13,171 the previous year.

The following statement gives a comparison of the last two years:—

	1917.	1916.
Loss on buildings	$ 260,775	$ 336,938
Insurance on buildings	3,276,145	4,515,210
Loss on contents	907,802	1,188,223
Insurance on contents	2,668,240	6,930,624
Total loss on buildings and contents	1,166,577	1,525,161
Total insurance on buildings and contents	5,994,385	11,445,834
Loss on buildings with no insurance	10,352	3,289
Loss on contents with no insurance	19,606	13,171
Fire alarms	2,080	2,071

Winnipeg, Man.—January 11—The owners of the Enderton Block, which was destroyed, carry a total insurance of $249,600, which is divided among the following companies: Ætna, $4,000; Alliance, $5,000; American Central, $700; British America, $6,000; British Empire Underwriters, $1,000; Commercial Union, $2,500; Continental of Winnipeg, $3,800; Firemen's of Newark, $1,000; Firemen's Fund, $19,000; Hamilton Fire, $3,500; Hudson Bay, $1,000; North America, $17,000; Law Union, $35,000; Liverpool and London and Globe, $4,000; London Assurance, $30,000; London and Lancashire, $2,000; London Mutual, $5,000; Millers National, $4,500; Mercantile, $1,000; Mount Royal, $1,200; National-Ben. Franklin, $2,000; New York Underwriters, $15,000; Niagara, $15,000; North British and Mercantile, $3,000; North Empire, $400; Northern, $15,000; Norwich Union, $5,000; North Western National, $7,500; Occidental, $4,500; Palatine, $5,000; Protector Underwriters, $2,000; Provincial, $7,500; Springfield, $8,000; Sun, $2,500; Western, $10,000. In addition to the above the Gordon Mitchell Drugs lost about $90,000. Blanket insurance in the Globe and Rutgers covering all stores in Canada and United States, $150,000.

WORKMEN'S COMPENSATION IN ALBERTA

Official Synopsis of Commission's Report and Recommendations—All Claims to Board

The following synopsis of the report of the commission which investigated workmen's compensation in Alberta, has been furnished *The Monetary Times* by Hon. Charles Stewart, premier of Alberta:—

On August 22nd, 1917, a commission consisting of three members was appointed by the lieutenant-governor-in-council to make an investigation into workmen's compensation in Alberta, and as a result of their investigation submitted, on January 22nd, 1918, to the lieutenant-governor-in-council, a report in the form of a draft bill.

Among other things this bill provides that what is known as state insurance should be adopted covering all industries covered by the Workmen's Compensation Act now in force

In addition to this, provision is made for the payment of immediate medical aid and the payment of compensation for industrial diseases.

It is suggested that the different industries be divided into schedules and that the act should go into force on August 1st, 1918.

Board of Three Members.

For the purpose of administration a board consisting of three members to be appointed by the lieutenant-governor-in-council will be constituted. This board will be responsible for the collection of a sufficient amount of money from the employers without the assistance of the employees for the purpose of establishing a fund from which all compensation for injuries to workmen would be paid.

For the purposes of assessment if any workmen is being paid at the rate of more than $2,000 per annum, the employer of such workman will pay assessment on his wages as if they were $2,000 per annum.

Compensation in the case of death will be paid to a widow at the rate of $20 per month and $5 per month for each child, not exceeding in the whole, however, $2,500. Where no dependants are left by the workman who has been killed, the expenses of burial, not exceeding $75, will be provided.

Permanent and Temporary Incapacity.

In the case of a workman meeting with an accident which causes permanent total incapacity, monthly payments, not exceeding in the whole $2,500, will be made.

In the case of permanent partial incapacity, stipulated sums are provided, varying according to the nature of the incapacity. The largest amount paid is $1,000 for the loss of an arm.

In the case of temporary total incapacity, a flat rate of $10 per week is paid for any person over twenty-one years of age, and $7.50 for any person under twenty-one years of age.

For temporary partial incapacity an amount equal to fifty-five per cent. of the difference between the wages earned by the person previous to the injury and the wages earned by him after the injury.

The assessment to be made on the employer may be either a percentage on the payroll or a lump sum, but in no case will the sum assessed be less than $5.

Where a workman received an injury which disables him for a period of fourteen days or more, he shall be paid compensation from the day of the accident, but if he is disabled for a period of less than fourteen days he shall be paid for and from the fourth day after the accident, except where the injury is attributable to the wilful and serious mis-conduct of the workman, unless the injury results in death or serious disablement.

All Claims to Board.

No action shall lie for the recovery of compensation, but all claims for compensation shall be heard and determined by the board. The provisions of the act shall be in lieu of all rights and right of action, statutory or otherwise to each workman or his dependants are or may be entitled, against the employer of such workman for or by reason of any accident happening to him while in the employment of such employer and action in respect thereof shall lie.

No sum payable as compensation shall be capable of being assigned, charged or attached.

A medical referee shall be appointed by the board who shall examine any person coming under the provisions of this act when required by the board to do so.

All compensation due shall be paid on the first and third Saturdays of each month.

Must Comply With Act.

It shall be a contravention of the act if any employer keeps in his employment any workman unless such employer has complied with the provisions of this act.

Each employer shall be required to notify the board within twenty-four hours after the happening of an accident.

Penalties not exceeding $500 and costs and in default of payment, imprisonment for a period not exceeding three months are provided for any violation of the act.

No proceedings shall be instituted for violations against the act except by some person appointed by the board.

GREAT-WEST LIFE ASSURANCE COMPANY

In an exceptionally clear and concise address to the shareholders, Mr. A. Macdonald, president of the Great-West Life Assurance Company, at the annual meeting outlined the company's progress and emphasized the many strong features of its position. There has been a definite improvement in the three vital surplus factors, and this appears in the form of surplus earnings increased by 20 per cent. A large new business usually has an adverse effect upon the surplus of the year in which the substantial business is secured through the first-year premiums being inadequate to cover the initial expenses and the reserve required by law. In 1917, the Great-West Life, however, increased the new business by 25 per cent. and the surplus earnings by 20 per cent., a commendable achievement.

During the past year the company received applications for policies of $34,435,396, and insurances were issued amounting to $30,309,542, an increase of nearly $5,000,000 over the previous year. The total insurance in force now amounts to $152,643,165, an increase of $19,626,717 during the year. This is the largest increase in the company's history, and is a record of which the field force particularly may feel proud.

The assets of the Great-West Life show an increase of $2,683,095 for the year, and now amount to $24,385,666. The premiums received in 1917 amounted to $4,934,625, the receipts from interest and rents were $1,499,807, and the total income was $6,437,320 (not including calls on capital). The company has $13,021,491 invested in first mortgages on real estate, and the experience of the past year has again confirmed the directors' belief that this form of investment combines the best security with the highest interest returns. The rate of interest for 1917, as reported to the government, was 7.36 per cent. The company has subscribed to our war loans to the extent of $5,652,500, of which $3,829,000 has been allotted and $2,505,337 paid up.

The death claims of 1917 exceeded those of 1916 by $76,797. As a percentage, this is an increase of 7 per cent., but, on the other hand, the business in force increased nearly 15 per cent. Consequently, the experience of the year was more favorable than in 1916, and the actual claims were 74 per cent. of those provided for under the mortality tables. The Great-West Life has always enjoyed a low mortality rate, and in view of the fact that war claims to the amount of $457,082 were incurred in 1917, the past year was actually one of the best in the company's history, so far as claims from ordinary causes are concerned.

The Great-West Life, which is under the capable management of Mr. C. C. Ferguson, has become one of our largest and leading companies. Its growth in the past decade is seen in the following table:—

Year.	Business in force.	Assets.	Surplus.
1907	$33,566,724	$ 4,525,558	$ 523,398
1912	83,978,739	12,251,982	1,675,051
1917	152,643,165	24,385,666	3,074,959

In ten years, therefore, the company has multiplied the business in force by over four, the assets by over five and the surplus by nearly six, a notable record. During 1917 45 per cent. of the total new business of the company was obtained east of the Great Lakes, the balance coming from Western Canada and North Dakota.

VALUE OF CANADIAN NORTHERN STOCK

Arbitration Board Meets at Toronto — Drayton-Acworth Report

Arbitration proceedings were begun on Monday at Osgoode Hall, Toronto, to fix the price to be paid by the Dominion government for the 600,000 shares of stock of the Canadian Northern Railway. That day was spent by Hon. F. H. Phippen, K.C., Canadian Northern Railway counsel, in giving a historical sketch of the road. He declared that the Canadian Northern Railway was the best railroad in America. Occasion was taken by Mr. Phippen to attack the Drayton-Acworth report, which was presented last fall, and which found the Canadian Northern Railway stock was of no value. Mr. Phippen declared that several items had been left out of the report, which should have been included. Sir William Meredith asked Mr. Tilley to take the matter up with Sir Henry Drayton, and, if possible, secure an explanation.

The arbitrators are Sir William Meredith as chairman; Wallace Nesbitt, K.C., representing Mackenzie, Mann and Company; and Mr. Justice Harris. W. N. Tilley, K.C., is chief government counsel, and is assisted by Gerard Ruel and Eugene E. Fairweather; I. F. Hellmuth, K.C., and A. M. Stewart, represent the Canadian Bank of Commerce; McGregor Young, K.C., and Pierce Butler, the latter of St. Paul, Minn., are appearing for Mackenzie, Mann and Company, Limited, and Hon. F. H. Phippen, K.C., and Mr. Orange Clarke represent the Canadian Northern Railway.

It was agreed that the statement of Mr. Phippen should not be considered as evidence, the chairman saying that it would be taken for what it was worth.

Drayton-Acworth Report.

The Drayton-Acworth report, which set the value of the common stock of the company at zero was the central topic for discussion at Tuesday's session. Mr. F. H. Phippen, K.C., counsel for Mackenzie and Mann, contended that the Drayton-Acworth report neglected assets aggregating $64,000,000, and was seriously at fault in its definition of depreciation. The point of Mr. Phippen's argument was that a fair exposition of these factors of value would result in an appraisal of values approximately $100,000,000 higher than that set out in the Drayton-Acworth report.

The statement of assets which counsel suggested had been overlooked by the commissioners included: Cash in trust account, earmarked for the construction of particular sections of the road, $20,899,687; current account, $2,354,788; proceeds of land sales on deposit with the National Trust, $1,657,500; accounts receivable, $8,722,438; book value of the company's unsold lands, $19,855,485; deferred payments on land sales, $7,140,996, and other items approximating $5,000,000.

Six Millions for Deferred Maintenance.

Professor Swain contended that the purchase value of the Canadian Northern Railway was equal to the cost of reproduction as new, less any amount of deferred maintenance. He had set the cost of reproduction at $397,000,000, and estimated that at present it was worth that amount less $6,000,000 on account of essential maintenance that had been deferred. Maintenance, he explained, was a obligation of the company to replace every element in kind to repair the losses caused by the wear of operation.

In the discussion of the item of depreciation it was generally conceded that from the $40,000,000 set by the Drayton-Acworth report, at least $12,500,000 should be allowed on account of such depreciation as had occurred during the period between the beginning and completion of construction. This amount was an accrued liability assumed by the company when it took the road over for operation, explained Prof. Swain, and, he added, should be added rather than deducted, as it would be appropriated from earnings and actually be put into the road to maintain it as an operating concern.

Matter of Depreciation.

In the matter of depreciation, which the Drayton-Acworth report set at over $40,000,000, counsel contended that this had been improperly defined, and in his argument he elaborated upon the idea that nothing should be deducted for depreciation except for depreciation resulting directly from deferred maintenance. This point was carried forward and examined in detail at the afternoon sitting, when Prof. George H. Swain, the Boston consulting engineer, who prepared the data for the commissioners, was examined. Prof. Swain, during an examination by Pierce Butler, representing Mackenzie, Mann and Company, declared that he was not in accord with the definition of depreciation as applied by the commissioners in the Drayton-Acworth report. He admitted that he had set depreciation down at $40,000,000, but he argued that the amount so given was intended to represent the difference between the cost of constructing the entire system "new," and the physical valuation of the system as it was estimated by his engineers as they found it. He was, he declared, personally opposed to the theory of depreciation adopted by the commissioners, and when asked to fix an amount which would, in his judgment, cover a proper estimate of depreciation to determine values for the purpose of the present arbitration, he stated that approximately $6,000,000—the amount of deferred maintenance—would be a fair deduction. "It was not I, but Sir Henry Drayton, who deducted the $40,000,000," he said.

NORTH AMERICAN LIFE ASSURANCE COMPANY

The total business on the books of the North American Life Assurance Company, Toronto, exceeds $65,000,000. The increase during the past year was over $5,500,000, the largest addition ever made in one year. The new business for the past year was also the largest in the company's history. The policies issued, together with those revived, amounted to $12,535,832. The cash income for the year from premiums, interest, etc., was $3,138,817. There was paid during the year to policyholders $1,574,291, which included $248,857 paid as dividends or surplus, while the amount paid to guarantors was only $6,000, an indication that the interests of the policyholders are paramount.

During the past ten years there has been paid as dividends or surplus to policyholders the sum of $1,882,467.

In explaining the various items in the statement, at the annual meeting of the company at Toronto last week, Mr. L. Goldman, the president, directed attention with pride to the payment of $6,000, paid as interest on the guarantee fund (in some companies called capital stock), because this amount has remained stationary for a number of years. "We deem it only fair to our policyholders," he said, "to point out that this company, so far as they are concerned, as to profits is almost a mutual company, because their interests, as repeatedly pointed out, are certainly paramount."

The addition to the company's assets last year, which now total $17,268,471, was $890,757, but in view of the government requirement as to certain of the securities being taken in at market value, which conservative course meets with the directors' approval, they were required to make an addition to the investment reserve fund of $65,000, thus leaving the net increase as $825,757. The investment reserve fund now amounts to $160,000, which is more than sufficient to place the assets on a very conservative and substantial basis, according to the government requirements.

Some interesting figures were submitted by Mr. Goldman as to the distribution of the company's assets, as follow:—

	1913.	1914.	1915.	1916.	1917.
Mortgages on real estate..	34.01	31.58	29.38	26.94	25.19
Real estate and building fund	1.05	1.05	1.05	1.03	.91
Bonds and debentures....	32.20	33.59	36.22	41.87	43.80
Stocks owned	13.75	13.08	11.70	10.89	10.67
Loans on stocks and bonds	.58	.12	.07	.04	....
Loans on policies	14.02	15.26	15.25	14.31	13.34
Fire premiums paid re mortgages	.01	.01	.01	.02	.02
Cash in banks—Cash at head office	.45	1.13	2.27	.90	2.14
Other assets—					
Outstanding and deferred premiums	2.42	2.56	2.32	2.27	2.22
Interest due and accrued; rent due and accrued...	1.50	1.62	1.73	1.73	1.67
Special deposit	....	....	....	....	.04

An analysis of the annual report shows that the North American Life Assurance Company continues to maintain a splendid financial position. It has always lived up to its motto, "Solid as the Continent." Mr. L. Goldman, the president and managing director, has always insisted upon a properly conservative policy, together with a degree of enterprise which has assured progress. He is supported by an excellent staff and an active directorate.

HAVE YOUR WILL DRAWN BY YOUR SOLICITOR

There are many ways in which the legality of a Will may be nullified. It is so easy to make the terms ambiguous that it is advisable to have your Will drawn by your solicitor. Proper provisions and accepted legal phrases are necessary to make a Will clear and indisputable. One important provision is the naming of your Executor, and in this connection we solicit that you name this Corporation. Explanatory literature sent on request.

Wills appointing this Corporation as Executor may be filed in our safe keeping free of charge. Correspondence invited.

LIFE INSURANCE LEGISLATION

Differences in Provincial Legislation Affecting Life Insurance Contracts in Canada

BY WILLIAM B. TAYLOR, B.A., LL.B.

(Fifth Article.)

Wife and Children. (As Specially Construed.)

Ontario.—A. Where the contract or declaration states that the insurance or part shall be for the benefit of wife and children or of children generally, the word "wife" shall mean the wife living at the maturity of the contract and the word "children," shall include children of the insured then living whether by his then or any former wife, and also the child or children then living of any deceased child who predeceased the insured, such last child or children taking the share that the parent would have taken if living. As amended May 1, 1914.

B. Where insurance designates a wife by name and she is not the wife living at the maturity of the contract the insurance money or part of it shall be for the benefit in equal shares of the wife living at the maturity of the contract and the children of the insured and also the children of any deceased child who shall be entitled to take the parent's share by representation. As amended April, 1916.

C. Where an unmarried man or a widower effects insurance for the benefit of his future wife or future wife and children, and the intended wife is designated by name or otherwise clearly ascertained, but the intended marriage does not take place, the contract shall be determined as in the case of an ordinary beneficiary. But where the intended wife is not named or ascertained, the insurance moneys form part of the insured's estate.

Manitoba.—There is no special provision in the Manitoba statutes.

Saskatchewan.—The statute is similar as in Ontario.

Alberta.—The statute is similar as in Ontario.

British Columbia.—Where the insurance is effected by an unmarried man or widower for the benefit of his future wife or children, but such person is not designated by name or otherwise ascertained, the wife to benefit by the policy shall be the wife living at the maturity thereof, and if unmarried the benefit shall form part of the insured's estate.

Similarly the children shall be construed as being the children living at the maturity of the contract.

Quebec.—See under "Beneficiaries."

New Brunswick.—The wife where not specifically stated by name shall be the wife living at the maturity of the contract.

Nova Scotia.—The wife where not specially stated by name shall be the wife living at the maturity of the contract, and the word children shall mean the children living at that time.

Where an unmarried man effects insurance naming a future wife or future wife and children and the intended wife is designated or clearly ascertained, but the intended marriage does not take place, all questions arising on the contract shall be determined as in the case of an ordinary beneficiary.

Prince Edward Island.—Similar provisions as in Nova Scotia.

Newfoundland.—Where the contract declares the insurance shall be for the benefit of wife and children generally, or to the children generally without specifying the names of such, the word children shall mean the children issue of the insured living at the maturity of the contract whether by his then or any former wife, and the wife to benefit shall be the wife living at the maturity thereof.

Where an unmarried man effects insurance for the benefit of his future wife or future wife and children and the intended wife is not designated by name or clearly ascertained, but the intended marriage does not take place, the contract shall be determined as in the case of an ordinary beneficiary.

Will.

Ontario.—A. The insured has power to deal with the policy by his last will.

B. Until the insurer has received the original or a copy of any written instrument affecting the moneys, he may deal with the moneys as if such instrument had not been made.

C. Special limitation is made as to the cost of probating the will or taking out letters of administration for the purpose of obtaining insurance moneys. Where the insurance money does not exceed $1,000, the cost is $4, not exceeding $2,000, $6, not exceeding $3,000, $8.

Manitoba.—A. Power to deal with contract under will.

Saskatchewan.—A. and B. same as Ontario.

Alberta.—A. and B. same as Ontario.

British Columbia.—All documents should be filed affecting insurance contracts.

Quebec.—A. The insured has power to deal with the policy in his last will and a copy of the will must be filed with the company.

New Brunswick.—A., B. and C. same as Ontario.

Nova Scotia and Prince Edward Island.—A., B. and C. same as Ontario.

Newfoundland.—A. and B. same as Ontario.

(To be Concluded.)

[The articles of Mr. Taylor, of which the above is the fifth, will be reprinted by *The Monetary Times* in pamphlet form and will constitute a valuable reference. Orders are being received now.]

FINANCE AND SPORTS

It is recognized that Britishers in the Old Country are keen supporters of outdoor recreations and amateur field or grass sports, and the rule applies particularly to financial and professional circles. This feature was noticed by the last party of Eastern Canada lawn bowlers touring the British Isles during the summer of 1913, when the opposing teams contained numbers of the banking fraternity and stock exchange men, especially in London and Scotland. It was only the outbreak of war that stopped the Imperial Bowling Board organizing a return visit to the Dominion in 1915. We, therefore, are interested to receive from the auditor of the English Bowling Association—the body regulating the laws and conditions of the "level-green" game in England—a copy of the "Statement of Receipts and Payments" for the fourteenth season ended September 30th, 1917. The auditor is an ex-resident of Montreal and Toronto, Mr. Edmund Woodroffe, C.A. (Ontario), and had the privilege of holding the office of honorary secretary to the Middlesex County Bowling Association at the time this county played the Canadian team at Wood Green, North London, when the teams received a municipal reception and were entertained, together with the guests, including representatives from the government offices in London of Canada, South Africa, New Zealand and Australia, at the Alexandra Palace. The palace and spacious grounds are now an internment camp for German civilian prisoners, a sharp contrast, as the Canadian bowlers can verify, to the inhuman quarters given the British civilian prisoners of war interned in semi-heated horse-boxes and unventilated lofts of the stables on the bitingly cold racecourse of Ruhleben, outside Berlin. To return to our review, we note the annual international contests between the four kingdoms and the individual national championships are abandoned for the duration of the war, but the diminished interest has not yet seriously decreased the annual subscriptions received from the affiliated clubs and counties. The International Bowling Board is being kept in working condition to regulate the future international contests and inter-Imperial tours of bowlers from across the seas. Another war sign is the item of insuring the challenge trophies, valued at £500, against risks of damage by aircraft and bombardment. For five leading competitions there are the Australia cup, the Sir Thomas Lipton cup, the Sir Thomas Dewar cup, the Lord Rosebery (London-Scottish v. London-English) cup, and the John Bull inter-county cup, presented by the paper "John Bull," the virile weekly critic. Incidentally, we know it has been the ambition of the auditor to secure from Canada a trophy, to be called "The Dominion of Canada Cup," in line with the Australian trophy. The publication of the E. B. A. Year Book is being continued. The surplus funds carried forward to the 1918 season are £135, a good showing for an amateur athletic body in semi-active war days. We congratulate the association on the clear exposition of its annual monetary statement, which shows income and expenditures under arranged headings, with the figures relating to the previous season, in parallel columns for comparison purposes.

GEORGE HOPE, President D. M. CAMERON, Treasurer

"INVESTMENTS"

A MUCH MISUSED TERM

Many who should be, and think they are laying up money for their old age, are misled into so-called "Investments," where their hard-earned money is jeopardized, and frequently lost, though it is of the utmost importance to them and to those who may be dependent upon them that its absolute safety should be beyond peradventure.

To those who should invest safely and with caution, not speculate, the bonds of the Canada Permanent Mortgage Corporation can be confidently recommended. This Corporation is most conservative in the investment of the funds entrusted to it. For more than sixty years it has held a leading position among Canada's financial institutions, and its bonds are a LEGAL INVESTMENT FOR TRUST FUNDS. They are issued for one hundred dollars and upwards. Write for full particulars.

DOMINION PERMANENT LOAN FAILURE

Searching Inquiry Requested—Caustic Comment of Press —Annual Disclosure Should be Made of Investments

Commenting upon the failure of the Dominion Permanent Loan Company, The Toronto Globe, in its issue of February 4th, said:—

"Blue-sky laws to prevent the flotation of mining and similar speculative companies by means of promises of temptingly large returns will be of little use in safeguarding the public if nothing is done to prevent the recurrence of financial tragedies such as the failure of the Dominion Permanent Loan Company. It appears that for many years one of the chief assets of the company has been a stretch of railway between Grand Forks in British Columbia and the town of Republic in the state of Washington. The financial community has known that the company was in deep water, and that only the sale of the railway to the Canadian Pacific or the Great Northern would enable the management to return even a part of the money invested by thrifty debenture-holders and depositors. Yet so little was known of these things outside of financial circles that the debenture-holders and depositors are taken entirely by surprise. Few of them appear to have known anything about the 'white elephant' their money has been used to feed. It is reasonably certain that these debenture-holders and depositors would have taken their losses years ago and put their savings into some more stable form of investment had the Dominion Permanent been required by law to disclose the number and the amount of its investments in the various classes of securities in which it charter permitted it to venture their money. It is doubtful whether many of the shareholders knew any more about the company's affairs than did its creditors, for on the surface the company's financial statements indicated not only solvency, but a considerable surplus.

Searching Inquiry Demanded.

"A searching inquiry is called for as to the circumstances under which the company put all its eggs into a very insecure basket. That will doubtless do good. But much more good would be accomplished by the prompt adoption of a law requiring companies such as the Dominion Permanent to disclose from year to year the number and the form of their investments. A loan company with a thousand mortgages, ranging from a thousand to five thousand dollars, upon property located all over Canada, would be an immensely stronger institution, and far more able to stand up against the blasts of misfortune, than a company like the Dominion Permanent, with most of its resources tied up in a single speculative enterprise.

"It should be the duty of the government of Ontario at the coming session to require the publication of information as to the form of their investments by all loan companies doing business in the province. This duty is all the more imperative because the name of Dr. Jamieson, speaker of the legislature, appears in the list of those having the direction of the Dominion Permanent's affairs, as vice-president of the company. Dr. Jamieson states that he has been with the company only a few months, and has attended only one or two directors' meetings. He desired to resign, he adds, when he learned of the position of the company, but his fellow-directors objected. The serious thing is that by failing to resign Dr. Jamieson and Attorney-General Johnson, of Manitoba, another director, permitted the small investors, who have in many cases lost the savings of years ot frugal living, to continue putting their money into a hopelessly insolvent concern because of their faith in the integrity of the speaker of the Ontario legislature and the attorney-general of Manitoba. The people demand, and intend to have, a higher standard than that from the men whom they elect to public office.

Should Pass Law.

"The least that Sir William Hearst can do to show that egislature condemns the sort of high finance exemplified e Dominion Permanent management, is to pass a strin- law requiring the annual disclosure in considerable de- the number, amount and kind of investments held by debenture companies doing business in Ontario."

INTER-IMPERIAL TRADE PREFERENCE

Suggested Establishment of Rates of Exchange Within the Empire

Canadian bank managers express interest in pronouncements of leading British bankers in favor of measures to create inter-Imperial trade preference through the establishing of rates of exchange within the Empire, says a London cable message to the Montreal Star.

If feasible it may prove a greater stimulant of Empire commerce even than tariff preferences which the British government have now followed the example of Canada and other Dominions in making a permanent feature of British policy.

Fixed Exchange Rates.

Mr. Frederick Goodenough, chairman of Barclay's Bank, said: "The extension of banking organizations and the maintenance of fixed rates of exchange within the British Empire will give the dominions and colonies a substantial preference which would serve to consolidate and promote trade within the empire and induce economy in the use of gold and enable gold resources to be utilized elsewhere. Drafts on London at fixed rates would be obtainable at all points. Similarly London would sell in the same manner and the balance of trade within the empire would be adjusted by closer administration of inter-Imperial finance."

Mr. Goodenough announced that in view of greatly enlarged trade after the war, Barclay's Bank had arranged with the Colonial Bank, of which Lord Beaverbrook is president, for working together on joint account in financing exports and imports from and to the West Indies, West Africa, and elsewhere.

Gold Production.

Mr. Charles Milburn, president of the London Joint Stock Bank, strongly urges increased gold production within the empire to rectify the disproportion of gold to war liabilities. Canada has her share of sixty millions sterling of empire gold out of the world's total output of 95 millions.

Mr. Milburn said he foresees the development of a firmly united empire which will carry and ultimately pay off the war debt, heavy though it is, but sound banking must have an adequate gold basis.

MUTUAL LIFE INSURANCE COMPANY OF CANADA

At the end of 1917, the Mutual Life Insurance Company of Canada, which has its head office at Waterloo, Ontario, had total business in force of $123,510,899. During the year nearly $500,000 were distributed in death claims to the families of deceased soldiers who had been insured in the company. The company is one of the oldest life assurance corporations in the Dominion, having been established in 1869. Since that date, it has made continued and substantial progress, as will be seen from the following table:—

Year.	Income.	Assets.	Paid to policyholders.	Business in force.
1877	$ 55,319	$ 110,309	$ 11,064	$ 1,699,301
1887	352,923	1,084,852	114,602	11,081,090
1897	819,980	3,730,777	347,862	21,487,181
1907	2,243,570	11,656,409	680,220	51,091,848
1917	6,424,515	32,165,432	2,513,991	123,510,899

During the past year an excellent record was made. The amount of new assurances written, the decrease in lapses, the lowness of the ratio of expense to income and the substantial increase in assets are all gratifying features of the year's successful operations. The new business issued amounted to 10,251 policies for $20,124,563, and, allowing for discontinued policies, the net increase in the business in force was $13,865,318—that is, the permanent increase in the volume of business was equal to 69 per cent. of the new business issued. This shows clearly how stable the business of the Mutual is and to how small an extent the business has suffered from lapsation.

Mr. George Wegenast is the company's managing director, and Mr. E. P. Clement is president. Under their direction, and with the assistance of a strong board of directors, an energetic field force and a capable head office staff, the Mutual Life of Canada has placed itself in an enviable position among underwriting corporations.

The Toronto General Trusts Corporation

Report of the Proceedings of the Thirty-Sixth Annual General Meeting.

The Thirty-sixth Annual Meeting of the Shareholders of The Toronto General Trusts Corporation was held in the Board Room of the Corporation's Head Office, corner of Bay and Melinda Streets, Toronto, on Wednesday, the 6th of February, 1918.

The President, Mr. Featherston Osler, K.C., D.C.L., took the chair, and Mr. W. G. Watson, Assistant General Manager, acted as Secretary of the meeting.

Mr. A. D. Langmuir, General Manager, submitted and commented upon the financial statements, showing the operations of the Corporation for the year ended 31st December, 1917.

The report to the Shareholders was then read, as follows:—

To the Shareholders:—

The Board of Directors have pleasure in submitting the Thirty-sixth Annual Report of the Corporation, together with the statements of Assets and Liabilities and Profit and Loss for the year ended the 31st of December, 1917.

The net profits for the year, after payment of salaries, advertising, fees and all expenses of management at the Head Office and Branches, and providing for all ascertained or anticipated losses, amount to $300,886.11, to which sum must be added $98,557.00, the amount brought forward from the preceding year, making a total of $399,443.11, which your Directors have dealt with as follows:—

To payment of four quarterly dividends at the rate of ten per cent. per annum		$150,000.00
To amount subscribed as follows:—		
Canadian Patriotic Fund..........	$10,000.00	
British Red Cross Society........	1,000.00	
Y.M.C.A. Military Fund	1,000.00	
		12,000.00
To amount provided for 1917 Federal Income Tax (payable in 1918)		11,000.00
To amount written off Head Office Building......		25,000.00
To amount transferred to Reserve Fund (increasing this Fund to $1,950,000.00)		100,000.00
To balance carried forward		101,443.11
		$399,443.11

The Assets and Liabilities Statement shows that the total assets in the hands of the Corporation amount to $83,286,782.69, an increase of $6,106,269.07 over the preceding year.

The Board of Directors have on your behalf made subscriptions to the Canadian Patriotic Fund, the British Red Cross Society, and the Y.M.C.A. Military Fund, confirmation of which will be asked for at the Annual Meeting.

It is with regret your Directors have to report the death during the year of Sir Wm. Mortimer Clark, K.C., and Mr. W. R. Brock, two valued members of the Board. The vacancies on the Board have been filled by the appointment of Mr. E. T. Malone, K.C., and Mr. H. H. Williams.

All of which is respectfully submitted.

A. D. LANGMUIR, General Manager.
FEATHERSTON OSLER, President.

Toronto, January 22nd, 1918.

Assets and Liabilities Statement for the Year Ended December 31st, 1917

To Amount transferred to Reserve Fund		100,000.00
To Balance carried forward		101,443.11
		$399,443.11

AUDITORS' REPORT.

We, the undersigned, beg to report that we have made a full examination of the books, accounts and vouchers of The Toronto General Trusts Corporation to 31st December, 1917, and find same to be correct and properly set forth in the above statements of Profit and Loss and Assets and Liabilities.

We have examined, and find in order, all the mortgages, debentures, bonds and scrip of the Corporation, as well as those negotiated for the Supreme Court of Ontario, and Trusts, Estates and Agencies in the Corporation's hands, and we have checked same with the mortgage and debenture ledgers and registers.

The trust investments and funds are kept separate from the Corporation's own securities and funds, and all securities are so earmarked in the books of the Corporation as to show the particular Estate, Trust or Guaranteed Account to which they belong.

The Banker's Balances, after deducting outstanding cheques, agree with the books of the Corporation.

All our requirements as Auditors have been complied with.

We have also examined the reports of the Auditors of the Winnipeg, Ottawa, Saskatoon and Vancouver Branches, and find that they agree with the Head Office books.

R. F. SPENCE, F.C.A., "Can." } Auditors.
GEO. MACBETH,

Toronto, January 21st, 1918.

The President, the Hon. Featherston Osler, K.C., D.C.L., in moving the adoption of the report, which was seconded by John Hoskin, K.C., LL.D., D.C.L., addressed the Shareholders as follows:—

The financial statements which have been placed in the shareholders' hands showing the results of the year's business will, the Directors feel assured, be received by them with satisfaction.

That the work of the Corporation has been carried on at a high level of efficiency, notwithstanding the present disturbance of business conditions—if one may judge of efficiency by results, as we are fairly entitled to do—is indicated by the facts that out of the net profits for the year the usual dividend is maintained; the sum of $100,000 added to the Reserve Fund, and an increased balance carried forward to the credit of profit and loss. These facts speak for themselves, and, supported as they are by the reports of the Auditors and the Inspection Committee, need not be further emphasized or enlarged upon. Nor need I go into the details of the work of the Head Office and Branches, as these are fully covered by the statements which have been laid before you and the address you will presently hear from the General Manager.

Perhaps I may usefully direct the attention of the Shareholders to one or two matters of general interest at this time:

First: That the investments of the Corporation are always of a legitimate, non-speculative character, vouched as to value as closely as care and caution can insure. The nature of these investments is disclosed in the yearly statutory returns made to the Government, which are open to inspection and criticism by anyone.

Second: The Corporation does not borrow money on deposit—indeed, every Trust Company is by law forbidden to do so; nor does it issue debentures, and its Guarantee Investment Receipts—the nearest approach to the latter—are non-assignable and are secured by securities ear-marked and appropriated to each Investor.

While it is inevitable that there should be some shrinkage or default in the payments of interest, these payments, considering the times, have been well kept up, and the very moderate extent to which the Corporation has been affected by the Moratorium Acts is indicative of the care taken in the selection of its investments.

The Trustee side—which I regard as the most important side of a Corporation of this character—has been very satisfactorily maintained, and it is this side to which I invite the serious attention of the shareholders, as it is the one which they can best extend and assist by their individual action and manifestation of confidence. The Corporation acts, as you know, not merely as Executor and Administrator and Guardian and Committee of persons and estates, but also in trusts of the most diverse description—charities, settlements, trust mortgages, frequently administering estates, the assets of which include the ownership or a partnership in some going concern or business, either to be sold as soon as convenient or carried on for a certain period. These businesses comprise a great variety of trade and commerce scattered in many cities and towns, for the handling of all or any of which the Corporation has the facilities incident to a trained staff and continuous management.

A resolution will be laid before you to approve and confirm the grants made by the Directors on your behalf to the Canadian Patriotic Fund, the British Red Cross Society and the Y.M.C.A. Military Fund.

The shareholders will join with me in regretting the loss by death during the year of Sir Wm. Mortimer Clark, K.C., and Mr. W. R. Brock, two valued members of the Board, who have been associated with the Corporation for many years. Their places on the Board were filled for the remainder of the term by the appointment of Mr. E. T. Malone, K.C., and Mr. H. H. Williams.

In conclusion, I would direct the thoughts of the Shareholders to the Roll of Honor on the walls of the Board Room—the simple but glorious record of the numerous employees of the Corporation who have devoted, some, their lives and all their service to the cause of their country in the world-war in which Canada is taking so splendid and unforgettable a part.

The President then called upon Mr. Langmuir, the General Manager, to address the Shareholders.

Mr. Langmuir said:—

The results obtained through the operations of the Corporation for the past year, as set forth in the very voluminous statements which have been submitted to you to-day cannot be regarded as anything but most satisfactory.

At the outset of the World War which has convulsed the great nations of the world for the past three and a half years the affairs of this Corporation were found to be in an absolutely sound and satisfactory condition, not only as to its own investments, but also in respect of investments taken by the Corporation for Estates and Trusts entrusted to its care, and we have been able to meet the new and changed conditions in a manner entirely satisfactory to our clients, scattered as they are in many lands.

If ever there was a time in which the advantages of a Corporate Trustee in preference to a private or individual trustee were clearly demonstrated, it has been during these three and a half war years; and it is here in the Corporate Trustee's continuous application of the best methods, in its systematic conduct of business on principles settled and approved by a wide and growing experience, in the facilities due to its great connection, and in its capacity to apply a sound judgment, that the Corporation claims special and marked advantages over any individual, private executor or agent however responsible. Every difficult or important question which may arise, whether in the management of estates, in the investment of moneys or in any other part of the Corporation's business, is carefully considered and disposed of by a trained Executive, in close touch and counsel with a Board of Directors composed of financial, commercial and legal men of ability and standing in the community. Consequently our clients have not only received their income promptly at stated periods during these war years, but they have also received, owing to the character of our investments, the benefit of increased rates of interest, thereby enabling them to meet more easily the increased cost of living, besides being free from the worries and anxieties which have attended under the changing conditions the care and management of such affairs. These changed conditions have entailed great care and thought, and the protection of the assets of estates could only be safeguarded by people of long experience, having practical knowledge of the manner and procedure of providing for same.

In the case of individual Executors and Trustees, many require to seek outside assistance and advice in the care and management of Trusts committed to their charge, often entailing expense and delay; whereas with the Corporate Trustee the responsibility is shifted to experts trained for the performance of just such duties.

The war naturally has brought about certain Federal and Legislative enactments with the object of helping food production and protecting soldiers on active service. These enactments have, however, not always had regard to the contract right of mortgagees, and as a consequence they have been the cause of a good deal of anxiety, and in some instances loss, to mortgagee interests.

The Seed Grain and Relief Act of the Dominion Government placed prior liens on all Northwest farm lands receiving benefits of advances regardless of the rights of existing encumbrances. Although two years have gone by since these advances were made, there still remains outstanding over $5,000,000 of liens on which there are very considerable arrears of interest showing. Having regard to the excellent crops and extraordinarily high prices which farmers have had for their produce, some dissatisfaction is felt by lending interests that more energetic efforts have not been made to collect these arrears.

Then we have had the Moratorium, and Volunteer and Reservist Acts, which protect debtors on active service, many of whom have never been overseas.

These Enactments, operating as they do, in some instances, greatly to the detriment of the mortgagee, are likely, unless some remedial legislation is passed, to have a very deterrent effect on capital being loaned in the Western Provinces or in those provinces that are unnecessarily protecting certain interests to the disadvantage of the lending companies. It is only fair to state that, as a result of the representations made to these provinces, there is an effort being made to rectify some of the unreasonable and prejudicial legislation. I consider the time is not inopportune to impress upon Western interests that, instead of antagonizing capital going into the West, their effort should be to do everything to attract it. The flow of money is, as everyone knows, governed in normal times by supply and demand. At the present time the supply is greatly depleted; Canada's source, which in the past has largely been from Great Britain, is entirely cut off, and so it is from the United States, and we are now almost entirely dependent upon Canadian funds; and having regard to the high rates of interest which lending companies have to pay for this money, it can only be accepted and loaned out again on a basis that will be reasonably profitable, and when it is known that the security will not be interfered with.

With regard to Real Estate conditions: Shortly after the commencement of the war in 1914, Real Estate sales in Toronto were practically at a standstill, and many vacancies were in evidence, compelling the owners to grant large reductions in rent, in order to retain tenants. After the first year of the war conditions began to improve slightly until the spring of 1917, when the demand for leased properties was so improved that rents were increased materially. Latterly there has been a dearth of houses to rent, with the result that there has been a fairly active demand for the purchase of modern houses, and particularly the smaller house. These conditions, however, do not apply to business properties, of which there are a good many vacant, and owners of many of those occupied have been compelled to reduce the rents, notwithstanding the fact that leases were in existence, in order to retain their tenants. In some sections of the city, stores that were vacant for a long time have been turned into apartments by the owners.

In Western cities the settlement of the tax situation is a matter of very considerable interest. Until Western cities can arrange a satisfactory basis for the collection of the great arrears of taxes that are owing on lands, little improvement can be expected in values for some time to come.

In light of these conditions and increasing taxation for patriotic and other purposes, which will make a heavy charge for a considerable number of years, it must of necessity be evident that too great care cannot be had in determining values of real estate taken as security for mortgage investments.

The volume of Trust Estates business entrusted to the Corporation during the year just closed compares favorably with the preceding year; 488 estates have been received having an aggregate inventory value of of $10,090,647.97, as compared with 455 estates in the year 1916, which amounted to $10,075,979.17. In this connection it will be opportune to say a word as to the charges and fees allowed to Trust Companies in regard to the management of estates.

The allowances to a Trust Company are not different from those made by the courts to an individual Executor and Trustee. Companies have no fixed tariff of fees, and if they had such a tariff, it would be optional to the beneficiaries of estates, if they were dissatisfied with the charges, to have the accounts of the estate referred to the courts for the purpose of determining what the charges should be.

It may be that some individual Executors and Trustees are not expected or do not propose to make any charge for their work; with that condition, of course, Trust Companies cannot compete. My experience is, however, that, as a rule, they take whatever is allowed to them by the courts, which is the same as the Corporate Executor and Trustee, with this difference, that no charges are made by the Trust Company for postage, stationery, books, etc.

The amount of investments negotiated by the Corporation during the past year in mortgages, Government and Municipal debentures aggregated the sum of $3,906,574.62. Our total investments, therefore, in these classes of securities (exclusive of original assets) at the end of our financial year amounted to as follows:—

Mortgages on Real Estate	$23,162,992.69
Government and Municipal Debentures	8,289,345.94
Making a grand total of	$31,452,338.63

being an increase during the year of $714,197.69.

Our interest collections have been satisfactorily maintained during the year. Of the interest charged, including arrears brought forward from 1916, there has been received in respect of our Ontario mortgages 97.77%, and with respect of the Mortgages in the Western Provinces 84.98%.

I am pleased to be able to report again this year that we have no unpaid interest on our holdings of Municipal Debentures.

The average rate of interest return from Ontario mortgage investments is 6.33%, and with respect of Western mortgages 7.72%.

With regard to the Corporation's Safe Deposit Vaults, this Department of the Corporation's business is being taken advantage of to a much greater extent, which fact, no doubt, is largely attributable to the great extent to which the public have subscribed for Dominion of Canada War Bond issues, and the desire to have a safe depository for those and other securities. These vaults, as you know, represent the most up-to-date construction; the annual charge for compartments is very low, and there is every facility to enable renters of compartments to transact their business as privately and conveniently as possible.

The net profits for the year, after providing for all ascertained or anticipated losses, amounted to $300,886.11, which with the balance of $98,557.00 brought forward to credit of Profit and Loss for 1916 left an amount to be dealt with by your Directors of $399,443.11. The disposition of this sum is shown in the Profit and Loss statement, and also in the report of the Board of Directors to the Shareholders, so that I need not take up your time in giving you these details again, other than to point out that in transferring $100,000 to the Reserve Account this fund has thereby been increased to the sum of $1,950,000, or $450,000 in excess of our Corporation's paid-up Capital Stock.

The Assets and Liabilities Statement shows a total of assets under the control of the Corporation of $83,286,782.69, or an increase over 1916 of $6,106,269.07, indicating a tendency on the part of the individual to provide in a permanent way by Trust Deed or Will a life income for his family, or friends, or charitable objects.

I very much regret to report that during the past year two additional members of our staff have made the great sacrifice—Lieutenant Hugh J. Watson, son of our Assistant General Manager, and Pte. W. C. McGregor, of our Winnipeg Branch. In addition to these heroes who have fallen we have to report the death of our esteemed Vancouver Branch Manager, Mr. F. M. Pratt, and two old and valued members of our Head Office Staff.

In closing I have pleasure in expressing my appreciation of the very faithful and efficient manner in which the staff of the Corporation both at the Head Office and its Branches have rendered their services during the year.

The Report was unanimously adopted.

It was then moved by Mr. E. R. Greig, seconded by Mr. Herbert Langlois, and resolved, that the following Shareholders be and are hereby appointed Directors for the current year, namely: Hamilton Cassels, K.C., LL.D., Hon. Senator W. C. Edwards, Brig.-Gen. Sir John M. Gibson, K.C.M.G., LL.D., Arthur C. Hardy, John Hoskin, K.C., LL.D., Lieut.-Col. R. W. Leonard, Thomas Long, J. Bruce Macdonald, Hon. Sir. D. H. McMillan, K.C.M.G., W. D. Matthews, Hon. Peter McLaren, Lieut.-Col. John F. Michie, Sir Edmund Osler, the Hon. Featherston Osler, K.C., D.C.L., J. G. Scott, K.C., Sir Edmund Walker, C.V.O., LL.D., E. C. Whitney, Wellington Francis, K.C., E. T. Malone, K.C., H. H. Williams.

At a subsequent meeting of the Directors the following officers were elected:—President, the Hon. Featherston Osler, K.C., D.C.L.; Vice-Presidents, Hamilton Cassels, K.C., LL.D., and Brig.-General Sir John M. Gibson, K.C.M.G., LL.D.

BANK CLEARINGS

The following are the bank clearings for the weeks of February 1st, 1917, and February 2nd, 1918, respectively, with changes:—

	Week ended Feb. 2, '18.	Week ended Feb. 1, '17.		Changes.
Montreal	$ 75,023,124	$ 66,613,747	+	$ 8,409,377
Toronto	56,223,257	50,641,615	+	5,581,642
Winnipeg	35,632,897	36,683,973	—	1,051,076
Vancouver	7,823,971	5,387,031	+	2,436,940
Ottawa	5,185,180	5,040,741	+	144,439
Calgary	6,029,227	4,289,672	+	1,739,555
Hamilton	4,186,938	4,109,820	+	77,118
Quebec	3,310,719	3,581,127	—	270,408
Edmonton	2,879,390	1,705,363	+	1,174,027
Halifax	3,225,856	2,134,480	+	1,091,376
London	1,649,293	1,817,625	—	168,332
Regina	2,498,980	2,097,669	+	401,311
St. John	1,927,169	1,508,665	+	418,504
Victoria	1,581,391	1,041,282	+	540,109
Saskatoon	1,402,256	1,281,536	+	120,720
Moose Jaw	883,599	895,509	—	11,910
Brandon	442,068	396,794	+	45,274
Brantford	672,490	851,618	—	179,128
Fort William	595,423	373,689	+	221,734
Lethbridge	492,673	517,305	—	24,632
Medicine Hat	418,123	426,203	—	8,080
New Westminster ..	303,023	260,466	+	42,557
Peterboro	546,325	551,893	—	5,568
Sherbrooke	624,962	493,998	+	130,964
Kitchener	446,770	463,758	—	16,988
Totals	$214,005,104	$193,165,579	+	$20,839,525

The Toronto bank clearings for the current week are $53,566,128, compared with $57,034,118 for the same week in 1917, and $42,494,062 in 1916.

ONTARIO SELLS BONDS

An issue of the province of Ontario securities was put on the market to-day, in the form of $2,000,000 6 per cent. coupon gold bonds. The bonds are dated February 1, 1918, and mature February 1, 1928, interest being payable on February 1 and August 1 of each year. The bonds will be registered, but may be exchanged for bearer bonds later on. The price is par and interest.

The gross earnings of Canadian railways for the month of January, 1918, owing to the cold and stormy weather and the consequent hindering of traffic, showed a decrease from those for the corresponding month last year. Earnings of the three principal Canadian railways aggregated $17,368.662 this past January, a decrease of $82,326, or .5 per cent. The Canadian Pacific Railway's earnings last month were $10,570,000, an increase of $629,000; Grand Trunk's, $4,083,362, a decrease of $594.026; Canadian Northern Railway's, $2,715,300, a decrease of $117,300.

JANUARY BANK CLEARINGS

The following are the bank clearings for the months of January, 1917, and January, 1918, respectively, with changes:—

	Jan., 1918.	Jan., 1917.		Changes.
Montreal	$343,925,558	$320,446,690	+	$23,478,868
Toronto	259,470,999	246,464,674	+	13,006,325
Winnipeg	176,539,246	160,752,399	+	15,786,847
Vancouver	38,174,171	28,757,111	+	9,417,060
Ottawa	25,528,300	21,974,359	+	3,553,941
Calgary	30,515,776	21,066,862	+	9,448,914
Hamilton	21,228,508	20,066,534	+	1,161,974
Quebec	16,732,685	16,350,128	+	382,557
Edmonton	15,235,467	11,199,510	+	4,035,957
Halifax	15,311,960	12,992,959	+	2,319,001
London	10,506,756	9,537,107	+	969,649
Regina	13,946,415	12,127,928	+	1,818,487
St. John	9,497,410	9,102,643	+	394,767
Victoria	7,518,345	6,241,300	+	1,277,045
Saskatoon	7,302,289	6,701,232	+	601,057
Moose Jaw	5,182,860	5,176,519	+	6,341
Brandon	2,675,515	2,216,315	+	459,200

EUROPEAN BANK RATES

The following table shows the current official minimum discount rates of all the European state banks, with the respective date at which the present rates were established, and the rates at the corresponding dates in previous years:—

Bank of—	Date of last change.	1918.	1917.	1916.	1915.
England	April 5, 1917	5	5½	5	5
France	Aug. 20, 1914	5	5	5	5
Germany	Dec. 23, 1914	5	5	5	5
Holland	July 1, 1915	4½	4½	4½	5
Austria	April 10, 1915	5	5	5	5½
Italy	Nov. 7, 1917	5½	5	5½	5
Russia	July 29, 1914	6	6	6	6
Spain	Oct. 27, 1914	4½	4½	4½	4½
Switzerland	Jan. 2, 1915	4½	4½	4½	4½
Portugal	Jan. 15, 1914	5½	5½	5½	5½
Sweden	Dec. 12, 1917	7	5½	5½	5½
Norway	Dec. 13, 1917	6	5½	5	5½
Denmark	July 10, 1915	5	5	5	5½

The purchase of $118,000 5 per cent. 1923-1937 bonds of Moncton, N.B., noted in *The Monetary Times* last week, was made by Messrs. Macneill and Young, bond dealers, Toronto.

The Toronto Mortgage Company

The Annual General Meeting of the Shareholders of the Toronto Mortgage Company was held at its offices, No. 13 Toronto Street, at 12 o'clock noon Wednesday, the 6th day of February, 1918.

On the motion of Mr. C. S. Gzowski, seconded by Mr. T. H. Wood, the President, Mr. Wellington Francis, K.C., took the chair and the Manager acted as Secretary. The Secretary read the notes calling the meeting, after which was read the minutes of the last Annual Meeting (which were confirmed), the Financial Statement, Profit and Loss Account for 1917 and the Annual Report.

Before moving the adoption of the Report, the President reviewed the operations during 1917 and spoke of the pleasure it gave him to be able to present such a satisfactory statement of the Company's affairs.

The Reserve Fund is now equal to 81 per cent. of the Capital Stock, now amounting to the substantial sum of $590,000.00. Reference was made to the great loss which the Company had sustained in the death of the late President, Sir William Mortimer Clark.

J. HARDY, F.C.A., } *Auditors.*

TORONTO, January 9th, 1918.

REPORT OF SCRUTINEERS

TORONTO, 6th February, 1918.

We hereby certify that the following gentlemen have been unanimously elected Directors of the Toronto Mortgage Company, at the Nineteenth Annual Meeting, held at the offices of the said Company this day, at 12 o'clock noon:—

Wellington Francis, K.C., Thomas Gilmour, C. S. Gzowski, George S. Henry, M.P.P., Herbert Langlois, Thomas H. Wood and Walter Gillespie.

(Signed) EDWARD R. GREIG, }
(Signed) WM. MARTIN, } Scrutineers.

At a subsequent meeting held by the Board, Mr. Wellington Francis, K.C., was re-elected President, and Mr. Herbert Langlois Vice-President.

The Toronto Railway Company

REPORT OF THE PRESIDENT AND DIRECTORS

For the Year Ending 31st December, 1917

TWENTY-SIXTH ANNUAL REPORT PRESENTED TO THE SHAREHOLDERS AT THE ANNUAL MEETING, WEDNESDAY, FEBRUARY 6th, 1918.

To the Shareholders:

Your Directors with pleasure submit the Twenty-sixth Annual Report, together with Balance Sheet and Profit and Loss Account of the Company, for the year ending 31st December, 1917.

While the gross income of the Company has shown an increase, the net income has been adversely affected owing to increase in wages and to the abnormal war conditions causing the price of all classes of supplies to advance very materially.

The gross earnings amounted to	$6,291,759.06
Charges for operating, maintenance, etc.	3,815,277.82
NET EARNINGS	$2,476,481.24

From which net earnings there was deducted the sum of $2,293,918.98, distributed as follows:—

Dividends	$960,000.00	
Bond Interest, etc.	146,887.66	
		$1,106,887.66
Payments to City:		
Percentage on earnings	$970,512.41	
Pavement charges	98,840.80	
General Taxes	117,678.11	
		1,187,031.32
		$2.293.918.98

The gross passenger earnings show an increase of $321,057.39, being for the year $6.202,562.67, compared with $5,881,505.28 for the year 1916. When one has in mind the large number of our citizens who are still engaged in the war overseas, the income from the operation of the system must be recognized as satisfactory.

The operating charges have increased—(*a*) through the large increase in the wages of conductors, motormen and shop hands; (*b*) owing to the fact that in nearly every line of material used in the upkeep of the Company's plant, the price has advanced greatly—in some cases the material used has increased over 200 per cent.

The operating and maintenance cost for the year amounted to the sum of $3.815,277.82, an increase of 4.5 per cent. over the cost of operation in 1916.

The payments made to the City of Toronto amounted to the sum of $1,187,031.32, which when compared with payments made during the previous year, shows an increase of $74,021.57.

The Company's agreement with its employees under which they were receiving 27½c. an hour, expired in June, 1917. The employees demanded a new agreement with a maximum of 40c. an hour and other onerous conditions. After negotiations and notwithstanding the Company's offer to arbitrate, the men went on strike, which lasted for two and a half days. Upon their return to work an arbitration was held under the Lemieux Act, which resulted in a majority award of 37c. an hour maximum rate. In other respects the previous agreement was substantially confirmed. Owing to the scarcity of labor and war conditions, your Directors reluctantly decided that they had no other course than to accept the award, although it meant an increase in operating expenses of about $600,000.00 per annum. The Directors feel that this award was not warranted by the weight of evidence submitted to the Board of Arbitration; that it was not justified by any comparison with the rates of wages paid for similar work in Canadian or American cities, and was not warranted by the earnings of the Company; that in fact the award was essentially unjust to the shareholders.

The seventh drawing of the Company's currency and sterling bonds, under the terms of the mortgage deed dated 1st September, 1892, took place on the 21st day of June. Under said terms the Company draws annually during the last ten years of its franchise, five per cent. (5%) of the amount of bonds issued, thus reducing during the ten years mentioned, the outstanding bonds to fifty per cent. (50%) of the original issue, and all bonds so drawn are to be redeemed on or after the 31st day of August following the date of drawing, from which date no interest is payable on bonds so drawn. There has been drawn to date a total of $1,592,519.98.

Careful attention has been paid to the maintenance of the plant, rolling stock equipment and other properties of the Company.

Your Directors declared, out of the accumulated surplus earnings of the Company, four quarterly dividends of two per cent. (2%), all of which dividends were paid on the several dates set for payment.

A regular monthly audit and verification of the books, accounts and vouchers, was made by W. S. Andrews & Company, Chartered Accountants, and their certificate has been attached to the Company's balance sheet.

Respectfully submitted,

WILLIAM MACKENZIE,
President.

TORONTO GENERAL TRUSTS CORPORATION

A financial institution, reflecting credit upon the Dominion, managed and directed by capable men of sterling integrity, the Toronto General Trusts Corporation has reached the thirty-sixth year of its career. In addressing the shareholders at the company's annual meeting on Wednesday, Mr. A. D. Langmuir, the general manager, was able to report that the volume of trust estates business entrusted to the corporation during the year just closed compares favorably with the preceding year; 488 estates have been received having an aggregate inventory value of $10,090,647, as compared with 455 estates in 1916, which amounted to $10,075,979. The assets and liabilities statement reflects a strong financial position and shows a total of assets under the control of the corporation of $83,286,782. This is an increase over 1916 of $6,106,269, indicating a tendency on the part of the individual to provide in a permanent way by trust deed or will a life income for his family, or friends, or charitable objects.

The amount of investments negotiated by the corporation during the past year in mortgages, government and municipal debentures totalled $3,906,574. The total investments in these classes of securities (exclusive of original assets) at the end of the company's financial year were as follow: Mortgages on real estate, $23,162,992; and government and municipal debentures, $8,289.346, making a grand total of $31,452,338. This is an increase during the year of $714,197. The company's interest collections were satisfactorily maintained during the year. Of the interest charged, including arrears brought forward from 1916, there was received in respect of the Ontario mortgages 97.77 per cent., and with respect of the mortgages in the western provinces 84.98 per cent., a splendid record.

The company's net profits for the year, after providing for all ascertained or anticipated losses, amounted to $300,886, which with the balance of $98,557 brought forward to credit of profit and loss from 1916 left $399,443 for distribution. In transferring $100,000 to the reserve account that fund was increased to $1,950,000, or $450,000 in excess of the corporation's paid-up capital stock, a creditable feature. Mr. A. D. Langmuir, as general manager, has piloted the company with marked success during the past few years, and he has an unusually experienced and capable assistant general manager in Mr. W. G. Watson. Mr. T. J. McQuire holds the responsible position of secretary. The company, generally, has an excellent personnel and organization.

SUN LIFE ASSURANCE COMPANY

Preliminary figures of the statement to be submitted to the shareholders of the Sun Life Assurance Company of Canada at the next annual meeting show that the total assets of the company on December 31st last amounted to $90,160,174, an increase of $7,211,178 for the year. Cash income from premiums, rents, interest, etc., which created a new record at $19,288,997, increased $789,866 over that for 1916.

At the end of the year the total surplus over all liabilities, including capital, amounted to $8,840,245, after allowing for payment or allotment to policyholders the sum of $1,560,389, an increase over the allotment for the previous year of $449,488. During the year the company paid in death claims, matured endowments and profits, etc., $8,840,245, bringing the total since the company's inception up to $69,094,316. In new assurance issued and paid for in cash the company beat its previous year's record by $5.039.270, with a total of $47.811,567, making the total assurance in force on the books of the company $311.870,945, an increase since December, 1916, of $30.436,245.

Mr. Norman Alan Hill, who was formerly consulting efficiency engineer for a number of United States companies, among them being the E. I. DuPont de Nemours and Company, of Wilmington, Del., has been recently appointed general manager of Carriage Factories, Limited. The company is a merger of Canadian Briscoe Motor Company, Limited, Brockville, Canadian Carriage Company, Limited, Brockville, Heney Carriage and Harness Company, Limited, Montreal, Munro and McIntosh, Limited, Alexandria and Tudhope Carriage Company, Limited, Orillia. The head office is in the Excelsior Life Building, Toronto.

PERSONAL NOTES

Mr. W. F. Tye, the well-known consulting engineer of Montreal, has been appointed a member of the Commission of Conservation in the place of the late Sir Sandford Fleming.

Mr. C. R. Drayton, Canadian manager of the Union Insurance Society of Canton, states that he has received instructions from his head office to subscribe $5,000 towards the Halifax Relief Fund.

Mr. E. F. B. Johnston, K.C., chairman of the board of directors of the Standard Reliance Mortgage Corporation, and a vice-president of the Royal Bank of Canada, has been elected president of the Sterling Trusts Corporation.

Hon. W. J. Hanna, who resigned the office of Food Controller recently, left for Peru this week for the purpose of adjusting some matters between the International Petroleum Corporation and the Peruvian government. Mr. Hanna is a director of the International Petroleum Corporation, which produces a considerable amount of crude oil in Peru.

Mr. W. T. Rundle, general manager of the National Trust Company, has been elected vice-president and a director. Mr. Rundle has managed the affairs of the company with considerable success and its sound and extensive expansion in the past five years is in no small measure due to his personal energy and business acumen. He is surrounded by a capable staff, among whom there is that friendly spirit which helps so much to make an efficient organization.

W. T. RUNDLE,

Elected vice-president and director of the National Trust Company.

Mr. A. D. Braithwaite, assistant general manager of the Bank of Montreal, has resigned his post, after a long and honorable service in the field of Canadian banking. Mr. Braithwaite's career with the bank dates back about 40 years, and before advancing to the position of assistant general manager he had filled a number of important posts, including the managership of the Toronto branch and the superintendency of Ontario branches. The war has laid a heavy hand on Mr. Braithwaite's family circle. Two sons-in-law, Capt. Guy Drummond and Capt. Trumbull Warren, made the supreme sacrifice in France, while a daughter was lost in the sinking of the Lusitania. Mr. Braithwaite's health has been indifferent, and recently he returned from a lengthy trip to Japan. Mr. Braithwaite is succeeded by Mr. F. J. Cockburn, with the title of acting assistant general manager. Mr. Cockburn, like Mr. Braithwaite, has been long in the service of the Bank of Montreal, and latterly had been filling the important post of superintendent of Quebec, Maritime Provinces and Newfoundland branches. Other changes in the list of the officials of the bank include the appointment of Mr. O. R. Sharp, as assistant to the general manager. Mr. Sharp succeeded Mr. James Aird as secretary of the bank about three years ago, and became acting assistant to the general manager, when the late Capt. D. J. Barker went to France. Mr. C. H. Cronyn has been appointed acting secretary of the bank.

A. D. BRAITHWAITE,

Who has resigned after long and distinguished service with the Bank of Montreal.

CITY AUDITOR WANTED

Applications for the position of City Auditor will be received by the undersigned up till twelve o'clock noon of Wednesday, the twenty-seventh day of February, 1918. A full statement of qualifications and experience must accompany applications. Applicants will particularly state whether they hold certificates as certified accountants and any municipal experience. An adequate salary will be arranged.

NORMAN H. H. LETT,
City Clerk.

Ottawa, February 5th, 1918.

WESTERN CANADA'S MISTAKE

Entire Rental of Land Should Go Into Public Treasury, Says New York Paper

There appeared in *The Monetary Times* of November 16th, 1917, an extract from a report on assessment and taxation by Mr. C. J. Yorath, city commissioner for Saskatoon. "The Public," a journal of democracy, published weekly in New York, in its issue of January 25th last, contains the following answer to Mr. Yorath's article:—

Wide circulation has been given to objections to municipal land value taxation in Western Canada presented by the city commissioner of Saskatoon, Mr. C. J. Yorath. Yet it seems that these objections answer themselves. Commissioner Yorath says of the actual results of the system:—

1. It has proved to be the most difficult method of raising revenue.

2. It induced owners to develop property beyond normal demand, with the result that increased taxation has been incurred and rents have been reduced. Six and ten story buildings were built with the result that store and office accommodations are corralled upon a small parcel of land and owners outside are prevented from development, even if they would.

3. It did not prevent land speculation. While it was in operation Western Canada passed through the greatest period of speculation in its history.

4. No system of taxation can be just which makes it impossible for an owner to earn a fair interest on his investment and result in confiscation of his property.

5. It did not spread the burden of taxation over the community—i.e., through the payment of rents, etc., as owners have been compelled to take in the way of rent whatever they were offered, which in the majority of cases was not sufficient to pay 3 per cent. on the money invested.

These objections may be treated seriatim:—

Due to Defects of Law.

1. Any difficulty in collecting the tax must be due either to needless defects in the law for proceeding against delinquents, or to negligence of officials. No difficulty of that kind has been reported from New Zealand where many localities have had the same system for a much longer time. Mr. Yorath should not blame the system for faulty legislation or administration that interferes with it.

2. How increased development happened to increase taxation, Mr. Yorath does not explain. If, as we are led to suppose, improvements are exempt from taxation in Saskatoon, it could not have increased the taxes of the improvers, unless the law should be improperly administered. In that case the administration is at fault. It may be that the development increased the value of unused property and consequently the assessments. That is as it should be. The same applies to the statements that it encouraged development and reduced rents. That some owners showed bad judgment in building is unfortunate, but whatever may be the evils of an over-production of buildings, it affects fewer people and is more easily borne than a system which makes rents high and withholds land from those who would use it. In the absence of more definite information from Mr. Yorath, it must be assumed that what prevents some unfortunate owners from developing is lack of demand. Now land that is not in demand must be valueless, and being valueless the owners have nothing on which to pay taxes, and can, without loss, refrain from paying. But Mr. Yorath may consider them unfortunate because they have been deprived of a chance to forestall industry and exact heavy tribute. From a predatory point of view that is unfortunate. But it looks otherwise when one considers the producer's interest.

Land Speculation and Taxes.

3. Apparently this contradicts the preceding objection. Mr. Yorath being on the ground, must be credited with knowing whereof he speaks. But he presents a picture hard to visualize: A community where land is being over-developed and at the same time held on speculation on a falling market. However, if there is land speculation—and undoubtedly there is—it is because the land value taxes fell far short of taking the entire rental value for public use. Mr. Yorath should have explained more at length. His two apparently contradictory objections can be reconciled on the assumption that exemption of improvements attracted capital to Saskatoon to invest in buildings, and attracted people. Certain individuals in the hope of indefinite continuation of these conditions sought to monopolize the benefits by grabbing land and holding it at high prices. Had the land value tax been high enough this could have been prevented. But because it was not, speculation proceeded until inflated values kept industry from spreading, and forced it to stop. Hence the corralling of six and ten story buildings on a small space and inability of owners to improve the balance. Saskatoon's remedy is to increase the tax.

Investments on Land.

4. Mr. Yorath should discriminate between investments. His argument is remarkably similar to that advanced by slaveholders against abolition. Investments in land have not the moral basis on which investments in labor products rest.

5. This indicates that the owners of improved building sites were robbed when they purchased. They had to pay so much above the real value of the sites that, in a majority of cases rents are not sufficient to pay 3 per cent. on the combined investment in buildings and land. Such occurrences are inevitable under a system that makes land a salable commodity. Mr. Yorath complains because the robbed ones were not able to shift their loss onto others. That is not an objection but an advantage. If robbery is to be stopped the last victims must not be allowed to hold up others. That may be hard on the last victims, but it is just nevertheless, and beneficial to the rest of the community.

Mistakes and Mistakes.

Mr. Yorath's story does show that Western Canada has made a serious mistake, but it is not what he supposes. The mistake was that, having begun to untax improvements and put all local taxes on land values, the western provinces have not raised provincial revenues the same way and have not insisted that all Dominion revenues be taken from the same source, so that the entire rental value of land would go into the public treasury. Half-way measures cannot be perfect, and must have results far from satisfactory. Canada is suffering from land monopoly. The evil must not be treated tenderly. Its total abolition should be the answer to those who would put the blame for its pernicious results upon a just taxation system.

WESTERN EMPIRE LIFE ASSURANCE COMPANY

The report for 1917 of the Western Empire Life Assurance Company, Winnipeg, indicates that good progress was made during the past year. Applications were received during the year for $1,214,835, and new insurance issued for $1,105,500, an increase of $78.63 per cent. over the business of the previous year. The total amount of insurance in force at the end of the year amounted to $3,234,768, an increase of $531,000, representing an increase of premiums upon business in force of 22.45 per cent.

The assets have increased $36,841, and now total $322,781. The net receipts on revenue account total $95,809, an increase of $23,262, or 32.06 per cent. over the previous year, being premiums, less amount paid for reinsurance, $77,414; interest, $18,304. There were also mortgage repayments $6,488, and policy loan repayments $3.500, which brings the total net cash received up to $120,101. This sum includes $14,302 received from shareholders on account of capital stock. There is a balance of about $49,000 to be collected on this account; the management anticipates that the greater part of that sum will be received during the next two years.

The total amount of claims paid was $9,625, of which $6,125 accrued from the previous year. The death claims for 1917 amounted to $3,500. Other payments were: Annuity instalment, $414; surrender values, $1,275; and dividends, $564. The amount of insurance participating in the dividend was $24,000. Of the death claims paid, $9,500 resulted from the war. The company's mortality experience is favorable, the total losses since the commencement of business being only 30.65 per cent. of the expected. Of the total claims paid, 47.66 per cent. have been war claims.

Mr. William Smith is managing director of the company. Messrs. R. W. Craig, K.C., and W. P. Rundle are vice-presidents, and Mr. Miles M Dawson, of New York, is the consulting actuary. In his report on the company's progress, Mr. Dawson says: "It should be possible to keep up, or even to increase this rate of growth while at the same time building up the company's resources and surplus. It is usually very difficult for a company to reach the stage which the Western Empire has now attained, but after that with care and steady management it has clear sailing."

EXPANSION OF MINERAL INDUSTRY ESSENTIAL

Instead of Importing, Canada Should Export Mineral Products

Canada pays more money for imported mineral products than she receives from her mines, the commissioner of conservation reminds us. The value of the mineral production for the calendar years 1913, 1914 and 1915 was $145,600,000, $128,865,000 and $137,100,000 respectively. The imports of products of the mine and manufactures of mine products for the same years were valued at $259,300,000, $181,676,000 and $146,324,000. As the imports also include manufactured, or partly manufactured products, they are much more valuable than the minerals we produce. If, however, Canadian minerals were turned into manufactured products in Canada, the present trade balance in minerals would be reversed.

Under Serious Disadvantages.

It is only fair, though, to point out that Canada is under serious disadvantages in the matter of manufacturing. The relatively small and scattered population makes distribution from points of production to points of consumption both difficult and costly. Similarly, where, for example, coal is essential for reducing ore and for manufacturing, the cost of transportation necessary to bring the two raw products together, bears heavily on manufacture. Copper, zinc and lead are produced principally in Western Canada, while the manufacturers and chief markets are in eastern Canada. In spite of these handicaps, a comparison of the figures for imports and those for production shows the opportunity that exists for developing a home market that will increase as the war goes on. Premier Lloyd George in his recent address stated that "Economic conditions at the end of the war will be in the highest degree difficult. . . . There must follow a world shortage of raw materials, which will increase the longer the war lasts, and it is inevitable that those countries which have control of raw materials will desire to help themselves and their friends first."

Export a Surplus.

The mineral resources of Canada, if developed, could supply not only our own needs but also permit the exportation of a surplus to other parts of the British Empire. There is, in Canada, an urgent need for production to pay for our war debt and borrowings before the war, and if we are to get the greatest value out of our mineral industry it is necessary that our metals and minerals be refined and made into manufactured or partly manufactured products in Canada. The production of certain mineral products in Canada has been stimulated by the war and new industries created. In the period of reconstruction, after the war, it will be necessary to safeguard and provide for the further extension of these industries.—W. J. D.

OXFORD PERMANENT LOAN AND SAVINGS SOCIETY

The province of Ontario is the home of a number of enterprising loan companies. Among them is the Oxford Permanent Loan and Savings Society, which, although a comparatively small institution, has been successfully managed, and, according to its latest annual report, is in a good financial condition. The total earnings last year were $58,884. Out of these were paid $22,609 interest on deposits, debentures, etc., and $7,859 for management, expenses and war taxes. This left a balance of $28,414. Out of that sum two half-yearly dividends at the rate of 7 per cent. per annum were paid, accounting for $20,414; $8,000 was added to the reserve fund. The reserve account now totals $144,300, compared with capital stock of $291,640.

The company's liabilities to the public are as follow: Deposits and interest, $357,242; debentures and interest, $246,555; sundry accounts and balances, $261. The assets of the Oxord Permanent, which has its headquarters at Woodstock, Ontario, total $1,051,308, of which $735,056 are represented by mortgages and loans, as follow: Mortgages on realty, $707,215; loans on society's stock, $16,654; loans on society's debentures, $4,367; loans on municipal debentures, $5,665; loans on stocks of other corporations, $1,154. The remaining assets comprise: Stocks and accrued interest, $33,046; government and municipal debentures, $183,455; office building, $6.500; rents, office building, $69; cash, $93,181. Mr. H. A. Finkle is president of the company and Mr. Malcolm Douglas is manager.

DECLINE IN VALUATION OF SECURITIES

The valuation of stock exchange securities by the Bankers' Magazine of London shows a decline of £158,000,000 during 1917 in their list of 387 representative securities, as compared with £149,000,000 in 1916. The total decrease is more than accounted for by a decline of £160,000,000 in the value of United States securities, which is ascribed to entry into the war and her flotation of over £1,000,000,000 in loans.

In other departments there have been considerable increases, especially in the industrial section. Brewery stocks, for example, have risen by no less than 41 per cent., electric lighting and power by 15½ per cent., canals and docks by 14 per cent., insurance shares by 14½ per cent., and shipping shares by 8¾ per cent. In British and Indian funds there is a slight movement in a downward direction, but colonial stocks are a little better on balance. English and colonial railway stocks have declined severely. In the mining departments movements have been slight, and, apart from copper shares, which are rather higher, the changes are adverse.

SASKATCHEWAN LIFE INSURANCE COMPANY

The only life insurance company with head office in the province of Saskatchewan, which is also owned and operated by and for the benefit of the people of that province, is the distinction claimed by the Saskatchewan Life Insurance Company. In submitting the financial statementt for the past year, the directors pointed out that, as upwards of 90 per cent. of the company's business is secured from agriculturists, it might properly be termed "The Farmers Life Insurance Company of Saskatchewan."

The company's premium receipts of over $71,000, with $2,315,000 of insurance at risk at the end of the past year, is evidence of the quality of the business. The favorable rate of mortality during the year (total losses of $5,500 only being reported) indicates that this business has been carefully selected, from a physical point of view. Expenses incurred, despite the increase in prices of all commodities, are moderate, and may be taken as a vindication of the policy of the directors in limiting the operations of the company to the province of Saskatchewan.

The directors' report says that the statement of assets and liabilities has been prepared on a conservative basis. The amount of outstanding and deferred premiums is small compared with the cash premium income, and in the liabilities has been included the sum of $7,500 as a special or contingent reserve fund. The amount of new insurances issued during 1917, all secured in Saskatchewan, was $1,198,998, the total amount in force being $2,315,306, upon which an average premium of over $30 per $1,000 was collected in cash.

In a statement to the shareholders, the directors say: "In a short existence very substantial progress has been made, and we feel justified in predicting that with a continuation of the support of the Saskatchewan people, the company will continue to prosper and reflect credit on the policyholders, shareholders and the great province after which the company is named."

Mr. T. F. Conrod is managing director of the company. He is a practical life insurance man, and has a lengthy experience in the business. The directorate includes a number of other well-known financial and business men of the province as follows—:

Messrs. George H. Barr, K.C., barrister, solicitor, etc., Regina, Sask.; Wm. H. Duncan, contractor, Regina, Sask.; Thos. Lees, farmer, Kisby, Sask.; David Low, physician and surgeon, Regina, Sask. (vice-president and medical referee); Hon. W. M. Martin, premium, province of Saskatchewan, Regina, Sask.; A. A. Meneley, merchant, Maple Creek, Sask.; Wm. T. Mollard, president, Saskatchewan General Trusts Corporation, Regina, Sask.; H. O. Powell (vice-president), general manager, Weyburn Security Bank, Weyburn, Sask.; J. W. Sifton, superintendent city schools, Moose Jaw, Sask.; and Chas. Willoughby (president), contractor, Regina, Sask.

Mr. W. F. Cowan, as president of the Standard Bank of Canada, heads the following directorate of that institution: Messrs. Wellington Francis, K.C. (vice-president), W. F. Allen, F. W. Cowan, H. Langlois, Thomas H. Wood, T. B. Greening and James Hardy. Mr. C. H. Easson is general manager and Mr. J. S. Loudon is assistant general manager.

The Great-West Life Assurance Company

held its twenty-fifth Annual Meeting on February 5th, 1918

Attention is drawn to the following statements:

Business issued, 1917 . . .	$ 30,309,542
Increase for the year .	4,734,169
Business in force Dec. 31st, 1917 .	152,643,165
Increase for the year .	19,626,717
Income for 1917	6,437,320
Increase for the year .	843,279
Assets, Dec. 31st, 1917 . . .	24,385,666
Increase for the year .	2,683,096

The expense rates were again lowered in 1917, and the interest rate earned was 7.36%. In addition to the actuarial reserves, the balance sheet shows, in surplus, capital and special funds, the sum of $4,493,611, being over 18% of the assets.

Mortality, including war losses of $457,082 only 74% of the "expected."

Canadian Government Bonds held, $2,505,337 (Being over 10% of the total assets.)

The Great-West Life is noted for its large profits to policy-holders. Write for full report and profit booklet.

NEW INCORPORATIONS

Gold Mining Company, With $1,000,000 Authorized Capital, is Chartered

The largest company incorporated during the past week was the Victory Gold Mines, Limited (no personal liability), with authorized capital of $1,000,000, and head office at Toronto.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are provisional directors:—

Fort William, Ont.—The Jarvis Agency, Limited, $40,000; F. M. Ross, F. Babe, M. M. Parish.

Bracebridge, Ont.—W. W. Kinsey Company, Limited, $40,000; R. Pawson, J. L. Yeoman, C. E. Lount.

St. Catharines, Ont.—H. Braidberg and Company, Limited, $40,000; H. Shapiro, J. Tobias, H. Braidberg.

Massey Station, Ont.—West Lake Telephone Company, Limited, $9,100; D. McAuley, C. Caldwell, J. Witty.

Victoria, B.C.—Bainbridge Lumber Company, Limited, $500,000. Wm. Cathcart Company, Limited, $20,000.

Renfrew, Ont.—Interprovincial Flour Mills, Limited, $500,000; J. A. O'Brien, W. O. Matthews, M. J. Gorman.

Village of Roland, Man.—The Roland Hardware Company, Limited, $25,000; G. Ross, M. J. Horn, W. Watson.

Port Arthur, Ont.—J. F. Hewitson Company, Limited, $40,000; A. J. McComber, W. F. Langworthy, G. A. McTeigue.

Sherbrooke, Que.—G. T. Armstrong and Sons, Limited, $150,000; K. J. Armstrong, J. F. Armstrong, H. S. Armstrong.

Ville Laval de Montreal, Que.—The J. Cadieux Company, Limited, $250,000; H. J. Brunelle, A. Langelier, L'Anse-a-Gilles.

Montreal, Que.—Hagar and Pettigrew, Limited, $50,000; E. E. Howard, J. De Witt, H. E. Rose. Leonard Steam Trawlers, Limited, $250,000; H. G. Lajoie, A. Lacoste, T. J. Shallow. Franklin Railway Supply Company of Canada, Limited, $25,000; J. S. Coffin, S. Coffin, S. G. Allen.

Toronto, Ont.—The British-Canadian Toy, Limited, $40,000; T. G. Clements, D. Clements, W. J. Ambrose. Victory Gold Mines, Limited (no personal liability), $1,000,000; L. C. Leigh, A. Gordon, M. Stern. Canada Decalcomania Company, Limited, $100,000; J. C. Irwin, C. H. J. Jagger, F. L. Burton.

Vancouver, B.C.—Allan and McKelvie Engineering Company, Limited, $50,000. Colonial Shipping Company, Limited, $40,000. Central British Columbia Colonization Company, Limited, $45,000. Estey and Brison, Limited, $10,000. The City Taxi Cab Auto and Sightseeing Company, Limited, $75,000. Seaside Lumber Company, Limited, $12,000.

Winnipeg, Man.—Manitoba Supply Company, Limited, $20,000; A. E. Harris, A. Nemerovsky, A. Harris. The Reliance Fuel, Timber and Lumber Company, Limited, $5,000; H. Leveten, M. Rady, H. Greenberg. Auto Accessories, Limited, $40,000; L. S. Baxter, H. Rennie, W. F. Yeo. Winnipeg and Canadian Northwestern Bible Institute, Limited, $5,000; S. T. Smith, J. Bellingham, C. J. Frogley.

WAR MISSION AT WASHINGTON

Canada has established a war mission at Washington. Mr. Lloyd Harris, who has been associated with the British war mission there for several months, will act as chairman. The Canadian war mission will act in the closest conjunction with the British war mission at Washington, as well as with the British embassy. It will act on behalf of the various departments of the Canadian government in respect of negotiations relating to purely Canadian affairs, and will exercise general supervision and direction over all officers of the government of Canada stationed in the United States in respect of matters connected with or incident to the prosecution of the war.

SURRENDER OF LIFE INSURANCE

Assured is Not Acting in His Own Best Interest—Disability Benefit Clause

"A life insurance company from its inception, passes through many phases of existence," said Mr. E. T. Malone, vice-president of the Imperial Life Insurance Company, Toronto, at the company's recent annual meeting. "At first it is engaged mainly in the collection of premiums and in the investment and apportionment of its funds for distribution in future years. Later it is its pleasant duty to distribute to its clients the moneys which have been so collected and apportioned.

"The beneficent work of life insurance is demonstrated, not only by the payments to beneficiaries under death claims, but by the payments to policyholders themselves on reaching an age when their earning power is impaired. It is also a demonstration of the great benefit to the commonwealth of the daily appeal of the life insurance salesman for the practice of thrift and economy by the public. From this company's point of view the maturing of an endowment policy is of advantage in that it gives our representatives in the field an opportunity of securing new business upon the lives of the policyholders themselves or upon the lives of the children or relatives of such policyholders."

Surrender of Policies.

Speaking of the funds paid out by insurance companies as surrender values to holders of life and endowment policies who have surrendered their contracts, Mr. Malone said:—

"A great part of this amount could be ranked with the payments under endowment policies and be regarded as moneys saved by the insuring public against the loss of earning power in maturer years. I cannot, however, fail to deprecate the tendency of some policyholders at the expiration of the dividend period under their life policies to surrender these contracts for the cash value. It is possible that this tendency is due to the fact that when the contract was sold an undue emphasis was laid upon the return in cash to the assured at the end of 20 years. It cannot be denied, however, that the assured in surrendering such a policy is not acting in his own best interest Without any question it is decidedly to his advantage to maintain his policy in force taking the profits which have been earned, and securing additional profits every five years thereafter. His policy thus provides for him a sure and certain estate and in addition is a revenue producer during his lifetime. By surrendering the policy for its cash value at the end of the dividend period the assured forfeits all of the future payments of profits for which the premiums paid have already provided."

Disability Benefit Clause.

Mr. Malone explained the disability benefit which a number of the Canadian life insurance companies have adopted. This will provide, in event of the total and permanent disability of the assured, a monthly income during the lifetime of the assured of $10 per month for every $1,000 of assurance under the contract. Moreover, on proof of this disability no further premiums are payable under the policy and the policy still continues to earn the regular profits and would have the regular increases in surrender values. The payment of any benefit under this disability provision does not in any way affect the benefit payable at the death of the assured. The extra premium to be paid by the policyholder taking out a contract with the new disability benefit included is not large and the benefit is necessarily restricted to those policyholders who can present an unblemished personal and family history and whose occupation is such as to preclude any undue number of disability claims incident to their occupation.

CANADIANS DOING BUSINESS WITH UNITED STATES

The United States War Trade Board, 1435 K Street, Washington, D.C., invites Canadian firms to communicate direct with the board so that such firms doing an import or export business with the United States may have their names and addresses placed on the mailing list of the War Trade Board to receive direct copies of all publications issued by that board.

A Newspaper Devoted to Municipal Bonds

THERE is published in New York City a daily and weekly newspaper which has for over twenty-five years been devoted to municipal bonds. Bankers, bond dealers, investors and public officials consider it an authority in its field. Municipalities consider it the logical medium in which to announce bond offerings.

CANADIAN BANKS IN UNITED STATES

Canadian bankers are interested in the measure recently introduced in the Albany legislature, providing that banks organized under the laws of a foreign country, with a duly authorized branch in New York State, may receive deposits and make discounts in the same manner as other banks upon making deposit with the state banking department of satisfactory securities. There will probably be some opposition to the proposed plan by national and state banks. Canadian banks are the principal foreign institutions represented in the New York market.

A Canadian banker says that, in his opinion, "the volume of business will be so great when peace is consummated that both Great Britain and the United States will have more business than they can handle, and there is no reason why Canada should not participate in the great demands for banking accommodation which must arise after the war."

The matter of depositing securities at Albany interests Canadian bankers, and they are curious to know what securities will be required. They will probably be obliged to deposit United States government, New York State and New York city bonds. This is expected to stimulate the market for United States bonds.

CUSTOMS RECEIPTS INCREASED

Customs receipts for the ten months of the fiscal year ended January 31st totalled $136,562,706, an increase of $17,013,310 over the same period last year, when they amounted to $119,549,396. A decrease of $2,637,571 in receipts for the month of January this year, as against January, 1917, is shown by the monthly customs statements. Last year receipts for January totalled $12,936,314, while this year they amounted to $10,298,743.

Mr. Herbert W. Taylor, who, for six years before the war, was branch manager at Regina for the London Guarantee and Accident Company, went overseas as an officer in the 46th South Saskatchewan Battalion. After 25 months' service in England, Belgium and France, he has resumed his position as western supervisor of the company, with headquarters in the Paris Building, Winnipeg.

THE WESTERN EMPIRE LIFE ASSURANCE CO.

SIXTH ANNUAL REPORT

The sixth annual meeting of the shareholders of The Western Empire Life Assurance Company was held at the company's offices, 701 Somerset Building, on Wednesday, the 23rd day of January, 1918, when a large number of shareholders were present.

The Directors' Report and Financial Statement, as set out below, were presented to the meeting and unanimously adopted. The following gentlemen were elected to the Board of Directors: R. W. Craig, K.C., W. P. Rundle, Dr. A. J. Fraser, F. D. Byers, S. D. Hannah, G. N. Broatch, G. E. Graham, William Smith.

Directors' Report for Year ending December 31st, 1917

To the Shareholders, The Western Empire Life Assurance Company:

Gentlemen,—Your Directors find pleasure and satisfaction in submitting to you their report for the year 1917, being their sixth annual report, together with the balance sheet and statement of receipts and disbursements.

New Business.—Applications were received during the year for $1,214,835.00, and new Insurance issued for $1,105,500.00, an increase of 78.63 per cent. over the business of the previous year.

Business in Force.—The total amount of Insurance in force at the end of the year amounted to $3,234,768.00, an increase of $531,000.00. Representing an increase of Premiums upon business in force of 22.45 per cent.

Assets.—The assets have increased during the year $36,841.10, and have now reached a total of $322,781.58.

Income.—The net receipts on revenue account total $95,809.42, an increase of $23,262.47, or 32.06 per cent. over the previous year; being premiums, less amount paid for re-insurance, $77,414.72, interest, $18,394.70. We also received from Shareholders $14,302.94. Mortgage repayments $6,488.41, and policy loan repayments, $3,500.60, which brings the total net cash received up to $120,101.37.

Interest.—The interest collections are the best yet experienced; the same pleasing statement applies to the premium Receipts. The amount of interest collected is 7.41 per cent. of the gross invested assets.

Expenses.—The total expenses of management amount to $60,018.50.

Payments to Policyholders and Beneficiaries.—The total amount of claims paid was $9,625.00. of which $6,125.00 accrued from the previous year. The death claims for 1917 amounted to $3,500.00. Other payments were: Annuity Instalment, $414.00; surrender values, $1,275.30, and dividends, $564.81. The amount of insurance participating in the dividend was $24,000.00. The surrender values are exceptionally low and reflect the satisfaction of the policyholders. Of the death claims paid, $9,500.00 resulted from the war.

Our mortality experience continues to be exceptionally favorable, the total losses since the commencement of business being only 30.65 per cent. of the expected. Of the total claims paid, 47.66 per cent. have been war claims.

Liabilities and Surplus.—The total liabilities, exclusive of capital stock, amount to $172,595.28. The surplus to policyholders has increased to $150,186.30.

Investments.—Your Directors are well satisfied with the investments. The amount of interest collected during the year is evidence of their quality. The greatest care has been exercised in the matter of investments, absolute security being the watchword. Victory Bonds were subscribed for to the extent of $75,000.00.

Government Deposits.—Our deposits with the governments have increased to $138,000.00. This amount is exceeded by only two other Canadian Life Insurance Companies.

Audit.—A continuous audit was carried on throughout the year by the Auditor and his staff as usual; who also examined at the year-end the Company's securities.

Our Agency Staff are entitled to commendation for the splendid increase in volume of new business written during the year.

The Company's Officers and Head Office Staff continue to perform their respective duties to the satisfaction of the Board.

The Directors retire annually and are all eligible for re-election.

(Signed) WM. SMITH,
President and Managing Director.

AUDITORS' REPORT.

We have examined the Books and Accounts of The Western Empire Life Assurance Company for the year ended December 31st, 1917. Satisfactory Vouchers were produced for all disbursements, and, in our opinion the above statement exhibits a true and correct view of the Company's affairs, as shown by the books of the Company at the said date. The securities, excepting those lodged with the Provincial Governments, of which we have seen satisfactory evidence, have been exhibited to us and found in order.

(Signed) STIRLING & RANKIN,
Chartered Accountants, Auditors.

Winnipeg, January 7th, 1918.

A copy of the Annual Report will be mailed on application.

THE TWENTY-FIFTH ANNUAL REPORT OF

THE HOME INVESTMENT AND SAVINGS ASSOCIATION

The 25th Annual Meeting of the Shareholders of the above Association was held at the Head Office, Winnipeg, on Monday, February 4th, A.D. 1918, at 4 o'clock p.m. The President, Mr. M. Bull, acted as Chairman, and the Managing Director, Mr. W. A. Windatt, as Secretary. The Secretary read the Directors' Report, Financial Statement and Auditors' Report as follows:—

Your Directors have pleasure in submitting the Balance Sheet and Statement of Profit and Loss Account for the year ending December 31st, 1917.

In spite of the difficulty experienced in loaning our funds owing to the limited demand for good loans, the results of the year's operations are very satisfactory.

We do not anticipate any change in the conditions until after the war, when doubtless the development of the country will call for all the capital available.

The usual examination by the Inspection Committee has been made and their report will be laid before the meeting.

M. BULL,
President.

BALANCE SHEET, DECEMBER 31, 1917.

ASSETS.

Loans on First Mortgages on Improved Real Estate	$1,820,445.77

		1,603,581.13
Total		$2,304,771.98

We have to report to the Shareholders that we have audited the books of The Home Investment & Savings Association for the year ended December 31, 1917.

We hereby certify that the accompanying Balance Sheet and Profit and Loss Account are in accordance with the books, and, in our opinion, are properly drawn up so as to exhibit a full and fair statement of the financial position of the Association as at December 31, 1917, and the result of the operations for the year ended that date. All our requirements as Auditors have been complied with.

MARWICK, MITCHELL, PEAT & CO.,
Chartered Accountants.

Winnipeg, Man., January 26, 1918.

			$130,969.20
Four quarterly dividends at rate of 9% per annum			88,769.00
Balance carried forward			$ 42,200.20

THE INSPECTION COMMITTEE'S REPORT.

To the President and Directors of The Home Investment and Savings Association,—

Your Inspection Committee having completed the duty assigned to it of checking over the loans of the Association begs to report as follows:—

Every loan entered in the records was examined most carefully and where arrears of interest for over six months existed note was taken of same. The list thus prepared is herewith submitted for your information, and for whatever action you may deem necessary under the circumstances.

Speaking generally, we have pleasure in stating that the loans as a whole were found in better condition than at the time of our inspection twelve months ago.

We again observe that a number of properties were taken over by the Association during the year, but there was also a large increase in the number of parcels disposed of over the previous year, so that the net increase in our holdings is less than we anticipated. Any possible losses we may sustain in connection with these properties have, in our opinion, been well provided for by the Contingent Reserve created for this purpose.

It is also satisfactory to find that the amount received from the rental of properties which have come into our possession is much larger than formerly.

Your Committee desires to thank the officials of the Association for assistance rendered while the work of inspection was in progress. We also note with satisfaction the condition in which the loan ledgers are kept and the attention to duty of the staff in this department of the office.

P. C. McINTYRE,
F. H. SCHOFIELD,
Committee.

Winnipeg, January 26th, 1918.

The retiring Directors, Messrs. M. Bull, P. C. McIntyre, W. A. Black, F. W. Drewry, F. H. Schofield, H. Byrnes, W. H. Cross and W. A. Windatt, were re-elected, and at a subsequent meeting of the new Board Mr. M. Bull was re-elected President, Mr. P. C. McIntyre, Vice-President, and Mr. W. A. Windatt, Managing Director.

BRITISH COLUMBIA WILL TAKE OVER RAILWAY

Suits brought by the government against Foley, Welch and Stewart and the Pacific Great Eastern Railway property have been settled. The government will take over the entire Pacific Great Eastern project and the contractors will drop out of it.

Following an official announcement on the terms of the settlement, which is expected to be made by the premier or minister of railways shortly after the opening of the House, legislation may be introduced that will provide for the completion of the Pacific Great Eastern from the present end of steel, a point 23 miles north of Clinton, to Prince George.

Under the proposal to settle what probably will soon remove the Pacific Great Eastern question from the courts, administration of the railroad will pass into the hands of the minister of railways. Foley, Welch and Stewart are to give up all their interest in the property, and will leave on the ground a great deal of equipment and material that they had on hand. The lands and property of the Pacific Great Eastern Land Company and all subsidiary companies are to be handed over to the government.

A sum of approximately $441,000, which remained to the credit of the Pacific Great Eastern in the Union Bank, Victoria, at the time of the Victoria investigation, also passes into the provincial treasury. The government, on its part, relieves the contractors from their obligations.

There are now on hand 8,000 tons of rails available for the completion of the road through to Prince George, and there is standing an order for 21,000 tons of rails recently financed by the government, let to the United States Steel Corporation, which, on instructions, must commence delivery. Thus, enough rails are on hand or on order to finish the line.

Representations are being made to Sir Robert Borden by Premier Brewster to the effect that some assistance from the federal government may be secured, not only for completing the line to Prince George, but also for continuing it to Peace River.

EXCELSIOR LIFE INSURANCE COMPANY

An excellent report was presented at the annual meeting last week of the Excelsior Life Insurance Company, Toronto. Mr. J. H. Black, managing director, and his colleagues on the board are to be congratulated on the results of the past year's operations, results to which an active field force and head office staff have also materially contributed. The new assurances written in 1917 totalled $6,191,154, an increase of 27 per cent. over the previous year. The total assurances in force amount to $24,118,126. A notable feature last year was the increased number of applications from male lives under twenty and from self-supporting women.

The mortality experience of the company was again favorable, the total claims amounting to only 64 per cent. of the expected. There was an increase of $54,524 in the surplus, a reduction of 22 per cent. in the expense ratio, and a reduction in the lapse rate as compared with 1916, a combination of gratifying features.

The amount paid to policyholders, added to the amount set aside for their future benefit during the year, totalled $734,521, being over 92 per cent. of the premiums actually received from policyholders during the year. The directors have made generous provision for all liabilities. In addition to the policy and annuity funds, amounting to $3,648,644, a special reserve has been set aside for possible unreported death claims. The investment reserve account has been increased to $16,316.

The total assets of the company show an increase of over $400,000, the investments during the year being confined to war loans, the company's holdings of which are now $587,500.

PROTECTION OF LIFE INSURANCE

"The increase of insurance in force indicates that tl war and business conditions generally have turned the min of people more to the subject of life insurance than ever b fore," said Mr. W. K. George, vice-president of the Nor American Life Assurance Company, at the company's annu meeting at Toronto last week. "I know from coming in co tact with business men and others that they now realize mo forcibly the importance of protection by way of life insuranc This applies in so many different ways and in such a bett manner than was the case when I first took out insurance c my life. A man nowadays can insure his life, nominate h wife as beneficiary, and provide under the policy that she to have a certain monthly income payable as long as sh lives. Thus he is absolutely assured beyond question that i case he predeceases his wife she is sure of a stated su monthly. Business men are now able to take out joint insu ance to protect their respective interests, while corporatior have insurance on the life of an expert who is in their en ploy, because in case of his death it would be difficult to r place him. The banks now require that manufacturers, bus ness men and others indebted to them shall insure their live and assign the amount by way of security, and in many case where this has been done it has been the salvation of th partners engaged in special business. I think Peter McArthu puts the question of life insurance in a very apt manner b stating: 'There was never a time when the benefits of lit insurance meant so much to the home-makers of the countr as they do to-day. In this crisis, when the future is unce tain, it is the duty of every father to see to it that the hom he is establishing for his family is made secure.' "

GOVERNMENT AND DOMINION PERMANENT LOAN

"There is no inspection of these loan companies," said Hon. I. B. Lucas, attorney-general of Ontario, in the course of an interview this week. "No government has instituted inspection, because that would ultimately involve responsibility for their solvency. We are ready to do anything we can, and if the assignee, as a result of his enquiry into the company's affairs, can suggest anything that might help to prevent a repetition of such an affair we would be ready to consider it."

* * *

Production of spruce in British Columbia for aeroplane purposes is being achieved on a large scale. This activity will continue until the end of the war and will mean a large increase in the value of timber products, probably bringing the figures of this business for 1918 into first place again among British Columbia's industries.

Hon. Walter Mitchell's bill dealing with taxes on estates was given third reading in the Quebec legislative assembly last week. Under one clause beneficiaries under insurance policies must pay succession duties on the proceeds of such policies. The present law had several clauses touching on this, but they were not clear nor operative, consequently Mr. Mitchell aims to put the matter beyond doubt. It is stipulated, however, that every insurance beneficiary shall be personally liable for the duties due in respect of his share in the succession, and for no more.

THE STORY OF A YOUNG FINANCIAL MAN'S SUCCESS.—A financial man, thirty-three years of age, came to our office four years ago to take up a new line of business—a line against which he had been prejudiced, but which he knew carried great rewards for the successful. His average commissions this year will be over $5,000.00, and he has built up a future income of over $3,000.00 a year on business already written. We are enlarging our organization to prepare for an enormous expansion of business during the next few years. We have positions for two good men with successful records. This offer will be open during the next week. Only applicants of unquestioned integrity and with the highest references will be considered. W. A. Peace, Manager Toronto Branch, Imperial Life Assurance Company, 20 Victoria Street, Toronto.

WANTED.—Fire Insurance Inspector for Ontario Field; headquarters, Toronto. Must be capable draftsman and familiar with schedule rating. Apply stating age, whether married or subject to military draft, also state experience and salary expected. Applications will be treated in strictest confidence. Box 143, *The Monetary Times*, Toronto.

MOOSE JAW RENTAL AGENTS.—The Ralph Manley Agency, Limited, Walter Scott Block, Moose Jaw, handle the renting of Moose Jaw Improved City Property. Their facilities permit them to rent and re-rent property as well as looking after collections and any necessary repairs. Established 1908. Correspondence solicited.

Moral: Insure in The Travelers

NEW SHIPBUILDING ENTERPRISES

A number of representative citizens of Sault Ste. Marie called upon Sir William Hearst, premier of Ontario, last week to discuss with him plans for establishing a shipbuilding industry at Sault Ste. Marie. Before the war steps were taken to establish a shipbuilding plant and drydock, but work has been delayed. Now it is proposed to begin the construction of wooden ships in connection with the steel plant, with a view to steel-ship construction later.

The British Columbia shipbuilding programme is to be augmented by the construction of forty wooden ships, aggregating a total of 140,000 tons. Twenty of these ships will be built in Victoria by a syndicate of capitalists, headed by Mr. J. G. Price, president of the Cameron-Genoa Mills Shipbuilding, Limited, the new shipbuilding concern to be known as the Victoria Shipbuilding, Limited, while the remainder will be built by the British-American Shipbuilding and Engineering Company, Limited, which had secured the lease of a shipbuilding site on the old Kitsilano Indian reserve at Vancouver. The larger company is headed by Mr. J. A. Sears, of Vancouver.

Mr. Charles Magee, a former president of the Bank of Ottawa, and in his 77th year, was found dead in his office on Monday. Death was due to natural causes.

Mr. Charles Archibald, who is one of the prominent citizens of Halifax, and pursued the vocation of mining engineer early in his professional life, becoming a mine owner in the Cape Breton coal field, has been appointed to the presidency of the Bank of Nova Scotia. He retired from his activities in that connection a number of years ago. He took an active interest in the promotion and management of West Indian traction enterprises and is president of the Camaguey Electric Company, and a director of Demerara and Trinidad Electric Railway companies. He has been a director of the bank for 20 years.

HEAD OFFICE - TORONTO, CANADA

"MUTUAL" PROTECTION AGAINST DISABILITY AND DEATH

Many Policyholders fear that a time will come when, owing to permanent disability from illness or accident, they will be disqualified from earning an income and paying their premiums. The Mutual Life of Canada issues a Policy which not only waives further payment of premiums but provides a monthly income of $10.00 per thousand of Insurance, should such a condition develop and be clearly proven. This is a Policy which affords protection to the full amount of the policy at death for the beneficiary and protection for the assured while helpless—Write for full particulars.

One of the most perfect Insurance Policies issued.

The Mutual Life Assurance Co. of Canada
Waterloo Ontario

THE UNAVOIDABLE "IF"

If a man were certain of living a specified time—IF he could foresee the future—perhaps he could do without Life Insurance. But the elements of uncertainty enters, and makes the best schemes of no account. It is this uncertainty that makes Life Insurance so invaluable. A Life Policy is the one certain way of providing for an uncertain future.

The Great-West Life Policies embody all the essentials of profitable Life Insurance. Low premium rates are charged—these premiums may be paid annually or otherwise, as suits the insured—the Policy conditions are liberal and clearly expressed, and the profit returns to Policyholders are so satisfactory that seldom does a participant fail to express both gratification and surprise at returns under his Policy.

Full particulars of suitable Policies will be mailed to any applicant.

The Great-West Life Assurance Co.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

The three bills of Hon. Walter Mitchell, provincial treasurer of Quebec province, providing for the creation of a department of municipal affairs were given second reading in the legislature last week. The minister of the new department who will be named later, will have supervision over the administration of the laws concerning the municipalities of the province. To this department will be entrusted the complete control of municipal finances, the issuing of loans, the provisions for sinking funds, as well as the methods of book-keeping to be employed. According to the new law municipalities must deposit with the provincial treasurer moneys to meet municipal and school corporation bonds when these fall due. In order to defray the expenses of the new department a system of fees is provided, payable by municipalities which make and withdraw the deposits with the provincial treasurer. The government will pay interest of 3½ per cent., and will be able to make a good margin by re-investing the money.

Oakville, Ont.—Messrs. A. E. Ames & Company have purchased $43,564 6 per cent. 20-instalment electric light and highway debentures of the town.

Walkerville, Ont.—The following bids were received for the town's $88,365 6 per cent. 9, 10 and 25-instalment bonds awarded to Messrs. A. E. Ames & Company, Toronto, as reported in *The Monetary Times* last week:—

A. E. Ames & Company	94.40
C. H. Burgess & Company	94.11
Wood, Gundy & Company	93.31
Canada Bond Corporation	93.24
W. A. Mackenzie & Company	93.05
Brent, Noxon & Company	92.76

Montreal, Que.—The Bank of Montreal is prepared to make advances to the city to the extent of $2,000,000 in anticipation of revenue, on the following conditions.

"It is understood the said advances are to be repaid from the taxes for this year. No portion of the proceeds to be used for capital expenditure. The $1,000,000 treasury bills now held by us overdue, to be repaid from the proceeds, and that no large cheques be issued without being first referred to the bank."

The board of control have resolved to issue treasury notes to the extent of $1,500,000 in favor of the Bank of Montreal, and further that the attention of the Bank be drawn to the fact that all the large cheques now issued do not cover expenses and capital, but represent salaries and other current outlay.

Ottawa, Ont.—The city last week awarded to the Bank of Ottawa three bond issues, aggregating $223,484, at a price to cost the city approximately 6⅛ per cent. The following were among the tenders received:—

Bank of Ottawa	94.875
A. E. Ames & Company	93.69
Wood, Gundy & Company	93.525
Canada Bond Corporation	92.69
Housser, Wood & Company	92.61
Dominion Securities Corporation	92.17
W. A. Mackenzie & Company	92.15
Morrow & Jellett	92.00
Brent, Noxon & Company	91.87

The issues comprised $120,984 5½ per cent. 20-instalment local improvement; $100,000 5 per cent. 10-instalment Patriotic and Red Cross and $2,500 5½ per cent. 10-year Y.M.C.A. grant bonds.

Prince Rupert, B.C.—In view of the fact that so much publicity was given the city regarding the temporary default in taking up their treasury certificates in London, brought about by the action of the Imperial treasury in 1914, it is interesting to know of the progress made by the city since that date. In a statement to *The Monetary Times*, Mr. E. D. Johnson, city treasurer and collector, points out that in 1914 the city's total bonded indebtedness was $2,594,838, of which only $250,070 was permanently sold; $1,371,000 was represented by treasury certificates which were renewed for one year (conditionally that they were taken up by cash payment); $202,237 were hypothecated to the bank for loans made; and $771,530 unsold. The assessed valuation for taxation was $17,486,485, and the gross mill rate was 13.975 mills. The city borrowed from the bank, $37,000 against current revenue. In 1915, $70,990 of short-term debentures matured and were taken up. In 1916, a further $25,870 matured and were paid for. The same year the whole of the debt was converted into serial bond form; two by-laws repealed, and the remaining debt permanently sold in the United States.

In 1917, the entire debt stands at $1,624,000, a reduction since 1914 of $970,838; besides which the city has on deposit $78,560 earning interest to meet payment of interest and principal on serial bonds due April 1st, 1918, and $48,210 to meet local improvement debentures due June 10th, 1918, and the whole transactions of the city for 1917 were carried on without borrowing from the bank against current revenue, or for any other purpose.

The assessed valuation for taxation for 1917 levy was $11,596,295, a reduction of $5,890,190 since 1914, and our tax rate 10 mills gross. Our local improvement levy in 1914 of $146,643 was reduced in 1917 to $81,000, making a total reduction in taxation since war was declared of 62 per cent., with arrears of taxes, $178,000; all sinking funds completed, and no obligations outstanding.

"I therefore submit," says Mr. Johnson, "having regard for the unenviable position in which the city stood in 1914, the fact of having resources sufficient to enable it to recover in this way, in spite of war conditions, should confirm the high regard bond houses have for Canadian municipal bonds, especially when applied to the older established cities, and argues well for the possibilities of British Columbia."

MANITOBA TELEPHONES LOSE MONEY

The report of the Manitoba government telephones for the year, which was tabled by the Hon. T. H. Johnson in the provincial legislature recently, shows a deficit of $30,349. The revenue for the year is reported to have been $1,847,704, while the operating expenses totalled $1,406,940, showing the net telephone earnings as $440,764. Against this were items of $45,450 for salaries to men of the department in military service and $425,663 interest charges.

HOME INVESTMENT AND SAVINGS ASSOCIATION

Difficulty was experienced by the Home Investment and Savings Association, Winnipeg, in loaning its funds last year owing to the limited demand for good loans. That has been the experience of other companies. An examination of the Winnipeg company's balance sheet, however, shows that, despite this drawback, the results of the year's operations were satisfactory. The net profits, after making the usual deductions, were $113,809, compared with $115,153 a year ago. Various taxes absorbed $5,312. Dividends were paid at the rate of 9 per cent. per annum, accounting for $88,769. There was a balance of $42,200 carried forward, which is twice the amount of the balance of profit and loss account at the end of 1916.

The company's total assets are $2,304,771, of which loans on first mortgages on improved real estate represent $1,820,445. The interest on mortgages totals $117,575. The company has an inspection committee, whose duty it is to check the loans. Every loan entered in the records was examined by the committee, who state that the loans as a whole were found in a better condition than at the time of inspection twelve months ago. They report that a number of properties were taken over by the company during the past year, but, as there was also a large increase in the number of parcels sold, the net increase in the company's holdings was less than anticipated. Any possible losses which may be sustained in connection with these properties the committee believe have been well provided for by the contingent reserve created for that purpose. This reserve is shown in the balance sheet at $50,000. The company holds $213,197 real estate. Office furniture is put in the balance sheet at the nominal figure of $1. There is cash on hand and in bank amounting to $66,915.

Of the liabilities to the public, debentures and accrued interest represent $234,594. There are deposits of $376,143 at call and $85,772 for fixed term. The company's paid-up capital stock is $989,131, and there is a substantial reserve fund of $500,000. Mr. M. Bull is president and Mr. W. A. Windatt is managing director. Judging by the annual statement, the company is in good financial condition, and has reason to be well satisfied with the past year's operations.

A SQUARE DEAL
IN LIFE ASSURANCE

Do YOU know anything about "loadings" ? ? ?

When the average Life Assurance Actuary figures out your premium he first finds the "net" premium, then adds to it a percentage called a "loading" to provide for expenses.

This method has been condemned by world famous actuaries for over half a century.

"First in the Northwest."

The Northwestern is the only Canadian Life Company that uses a scientific method of providing for expenses, and this results in

TRAVELERS INSURANCE COMPANY

The statement of the Travelers Insurance Company for the past year again shows an increase in business greater than that of any previous year. It is pleasing to note that L. F. Butler, the president, in the annual report, pays a tribute to the efforts of the field men in increasing the volume of business, as well as to their co-operation in maintaining the company's standard of quality. This old and substantial underwriting corporation has its head office in Hartford, Conn., but has a large volume of business in Canada, having commenced operations here in 1865, only two years after that company's incorporation.

Last year the company received premiums of $40,116,754, divided as follows: For life insurance, $16,516,888; accident insurance, $4,679,368; health insurance, $1,200,808; workmen's compensation insurance, $11,335,400; and liability insurance, $6,384,290. These figures do not include reinsurance premiums. In addition, there was received a sum of $6,295,157 for interest, dividends, rents, etc., making the total income for the year $46,411,911. The company paid claims of $18.272,297 in 1917, and for the prevention of accidents by inspection the large sum of $531,146 was paid. At the end of the year the company was able to record increases in every important department as follows: In assets, $14,215,836; life insurance paid for, $70.876,608; life insurance in force, $140,923.162; total income, $9,360,411; payments to policyholders, $2,641,246; reserves for protection of policyholders, $14,624.223; premiums for life insurance, $2,856,392; premiums for accident insurance, $180,823; premiums for health insurance, $254,104; premiums for workmen's compensation, $3,450,093; premiums for liability insurance, $1,242,564, while the increase in total premium income was $7.983,076.

Some idea of the strength of this corporation is gathered from the fact that its total assets amount to $129.311,109. It has reserves and all other liabilities of $115,248,166. Its capital and surplus total $14,062,943. Since its inception payments of $195.314,111 have been made to policyholders.

The company's chief agent in Canada is Mr. F. F. Parkins, with head office for the Dominion at Montreal. There is an excellent organization throughout Canada. At the end of 1916, its total assets in this country amounted to no less than $5,580,976. Its income here in the same year was $998,070, and its expenditure in Canada was $541,771.

ELECTRIC SMELTING IN CANADA

Not many years ago the opinion prevailed in Canada that, while electric smelting was interesting, the time was far distant when it would be put into practical operation. The situation, however, has radically changed. There are, at the present time, 32 Heroult electric furnaces in Canada and 22 of other types—in all, 54 furnaces using the electric process. These furnaces have a capacity of 173,000 tons of iron and steel, 50,000 tons of ferro-silicon, and 8,000 tons of other ferro-alloys per annum. The British Forgings plant at Toronto has ten electric furnaces of the Heroult type and a total capacity of 60 tons per heat, or about 72,000 tons per annum, making it the largest electric-process steel plant in the world.

FLAX STRAW FOR BINDER TWINE

The Flax Fibre Development Association of Regina, Sask., announces that it has discovered a process for manufacturing flax straw into binder twine, commercial twine and yarns for weaving into heavy sacking and toweling. Heretofore, the flax straw of the three western provinces, amounting to over 1,000,000 tons annually, has been burned after thrashing.

It is said that experiments carried out this autumn with the new binder twine showed that it bound 99 per cent. of the sheaves perfectly, a better result than was obtained with sisal twine. A co-operative company is being formed to manufacture the new twine.

JANUARY FIRE LOSSES

Six Business Sections Destroyed Last Month—Many Large Fires Reported

The Monetary Times' estimate of Canada's fire loss during January, 1918, is $2,688,556, compared with the December, 1917, loss of $5,144,100 and $1,918,660 for January, 1917. The following is the estimate of the January losses:—

Fires exceeding $10,000	$2,222,900
Small fires reported	114,975
Estimate for unreported fires (15 per cent. of total)	350,681
Total	$2,688,556

The Monetary Times' record of the past four years shows the following monthly losses:—

	1915.	1916.	1917.	1918.
January	$ 1,249,886	$ 1,649,217	$ 1,918,660	$ 2,688,556
February	1,019,556	3,275,600	2,009,953	....
March	1,632,696	1,406,501	2,050,650	....
April	1,463,747	1,460,437	1,317,714	....
May	881,855	1,850,205	1,163,110	....
June	1,157,156	494,557	1,184,627	....
July	773,269	3,039,634	1,101,734	....
August	403,693	1,057,109	1,230,183	....
September	1,116,109	981,703	1,301,700	....
October	1,290,325	1,077,815	704,605	....
November	1,087,980	923,235	959,049	....
December	1,595.255	3.271,496	5,144,100	....
Totals	$13,671,527	$20,487,509	$20,086,085	$ 2,688,556

The fires reported in January at which the losses amounted to $10,000 and over were:—

Hartland, N.B., January 4, C. H. Taylor's brick block, $18,000.

Hamilton, Ont., January 9, Gage Avenue School, $14,000.

Hamilton, Ont., January 9, Rilett block, $33,000.

Knowlton, Que., January 4, summer residence of John Bailey, $15,000.

Montreal, Que., January 1, Arena Ice Plant and several houses, $100,000.

Munson, Alta., January 2, business block, $35,000

Peterboro, Ont., January 6, Peterboro Canoe Company's factory, $40,000.

Quebec, Que., January 4, employees' residence, storage house and many motor and other vehicles, $10,000.

Toronto, Ont., January 6, Toronto Ferry Company's dock, $30,000.

St. Joseph, Que., January 3, four houses, $10,000.

St. John, N.B., January 2, jewelry store of A. B. Smalley, $50,000.

St. John, N.B., January 2, Hamm Brothers' biscuit manufacturing buildings, $100,000.

St. John, N.B., January 4, residence of Mr. F. E. Williams, $35,000.

Vancouver, B.C., January 8, H. A. Timms' printing plant, $30,000.

Westmount, Que., January 5, block of brick houses, $15,000.

Winnipeg, Man., January 8, Winnipeg Brass Company's premises, $10.000.

Listowel, Ont., January 13, large business block, $200,000.

Peterboro, Ont., January 10, Boston Cafe, $15,000.

Welland, Ont., January 16, premises of the Chinese Y.M.C.A. and two adjoining houses, $25,000.

Bathurst, N.B., January 20, Robertson Hotel, $22,000.

Edmonton, Alta., January 15, John McKinnon's livery barn and 19 horses, $10,000.

Montreal, Que., January 18, B. Silver & Company's furrier establishment, $25,000.

St. Catharines, Ont., January 21, Daily Journal newspaper office, $15,000.

St. John, N.B., January 20, Main Street tenement, $10,000.

Toronto, Ont., January 23, Ticonix building, $8,300.

Brandon, Man., January 23, business block, $200,000.

Peterboro, Ont., January 26, business block, $500,000.

Guelph, Ont., January 27, dry goods establishment of G. B. Ryan & Company, $225,000.

Edmonton, Alta., January 26, Sandison block, $25,000.

St. Lambert, Que., January 29, large office building, $20,000.

Cabono, Que., January 20, D. Frazer & Sons' lumber mills, $20,000.

Picton, Ont., January 28, Picton Hotel, $10,000.

Hespeler, Ont., January 23, Hespeler Roman Catholic church, $13,000.

Joliette, Que., January 25, St. Viateur Academy, $100,000.

New Ross, N.S., January 28, mill of N. S. Manganese Company, $100,000.

Winnipeg, Man., January 26, Monadnock block, $20,000.

Parry Sound, Ont., January 15, Rose Point Hotel, $25,500.

Bardon, Ont., Blubacher factory, $22,400.

Chatham, Ont., January 5, Dominion Steel Company's plant, $15,000.

Gananoque, Ont., January 14, Ontario Steel Products Company's plant, $14,700.

Norwich, Ont., January 13, Wood Flour Mills, $12,000.

Ottawa, Ont., January 10, Water Street Catholic Hospital, $25,000.

Destroyed or Damaged.

The structures damaged or destroyed last month were:—Residences, 16; stores, 4; vacant house, 1; printing plants, 3; factories, 6; brick blocks, 2; business buildings, 3; hotels, 5; plants, 7; livery barns, 2; boathouses, 2; shoe repair shop, 1; army building, 1; frame shed, 1; freight shed, 1; lumber mill, 1; boarding house, 1; flour mills, 2; woolen mill, 1; farm house, 1; club building, 1; apartment house, 1; theatre, 1; school, 1; employees' residence, 1; convent, 1; storage shed, 1; manufacturing buildings, 3; Jewish synagogue, 1; dairy, 1; hospital, 1; cafe, 1; oil tanks, 3; church, 1; military hospital, 1; academy, 1; warehouse, 1; ferry dock, 1; tenement, 1; barns, 3; roundhouse, 1; railway station, 1; business blocks, 6.

The causes of fires reported were:—Conflagration after an explosion, 1; hot ashes, 1; overheated stove, 2; defective controller, 1; playing with matches, 1; fire from blazing dock, 1; spontaneous combustion, 1; overheated stove pipe, 1; crossed electric wires, 1; igniting of gas from oil tank, 1; cat upsetting oil stove, 1; thawing out frozen pipes, 2; chimney fire, 1; explosion of oil stove, 1; explosion of gas main, 1; rats nibbling matches, 1; explosion of gas, 1; explosion of acetylene tank, 1; gas left burning over night, 1.

Many Fatalities Last Month.

The following is a list of the fires at which fatalities occurred last month:—

Ingersoll, Ont., January 3	Explosion at plant	2
Quebec, Que., January 4	Trapped in employees' residence	1
Dawson, Man., January 4	Trapped in burning house	1
Winnipeg, Man., January 5	Fire from gas grate	1
Stoneham, N.B., January 7	Clothing took fire from stove	1
Westlock, Alta., January 7	Trapped in burning house	1
Edmonton, Alta., January 7	Trapped in burning house	1
Ottawa, Ont., January 10	Trapped in burning hospital	5
Peterboro, Ont., January 10	Trapped in burning cafe	1
Mimico, Ont., January 11	Trapped in burning train caboose	3
Windsor, Ont., January 23	Trapped in burning house	2
London, Ont., January 20	Playing with matches	1
Guelph, Ont., January 24	Igniting coal oil	1
Montreal, Que., January 25	Trapped in burning house	4
Toronto, Ont., January 31	Fire from gas heater	1
Regina, Sask., January 31	Trapped in burning house	2
Total		28

The following table compiled by *The Monetary Times*, shows deaths caused by fire during January, as compared with previous returns:—

	1911.	1912.	1913.	1914.	1915.	1916.	1917.	1918.

FIRE LOSSES IN WAR INDUSTRIES

The National Board of Fire Underwriters of the United States has compiled a list of losses in excess of $100,000 of war materials and munitions by fire from all causes from the time war was declared by the United States on Germany last April. Some of the losses are believed to be of incendiary origin, but many were the result of other causes, including criminal carelessness and preventable physical conditions. The losses in foods, clothing, metals, oils, lumber, leather, coal, chemicals and other war supplies, as well as damage to piers and grain elevators, aggregated $43,558,000 from April 1st to December 31st, 1917. The grain losses alone were approximately $6,000,000. It is pointed out that losses on this scale indicate the need for an efficient, armed watch service, as well as the utmost care in the prevention of accumulation of fire-breeding materials, the elimination of physical hazards as far as possible, and thorough inspection of the fire protection in order that it may be certain to be ready for service should occasion demand.

Immigration to Canada in War Time

THE DOMINION *Has Received 300,000 Immigrants Since the Struggle Commenced—New Population from United Kingdom Naturally has been Small—United States Has Sent Us Many Citizens—What is the Outlook after the War?*

By **CHARLES W. STOKES**

IN the matter of immigration there is a tendency to allow the possible phenomena of the future to overshadow the *faits accomplis* of the present. It is the most monotonous of bromides to predict an enormous immigration into Canada after the war, sometimes with very superficial consideration of the very complex problems involved, very often as a panacea for all the abnormal circumstances that will demonstrate themselves at the cessation of hostilities, and occasionally as a probable menace to industrial conditions. But what is most often overlooked is that immigration is going on at the same time, and has, indeed, shown a very marked revival.

War, theoretically, should terminate immigration. On one hand is the difficulty if leaving belligerent countries; on the other is the patriotic aversion to seeking material advancement (for that is what immigration means) during a period of national stress. Habituated, as we are in Canada, to considering immigration in the mass, most of us fail to remember its unit origin; or, to put it in other words, the reason why we have immigration at all is because a number of men and women in other countries have, separately and individually, resolved to seek their fortunes here. There is every theoretical argument why this class should disappear during the war; but the fact remains that social dissatisfaction, as expressed in the process of emigration, has not been stifled, even in the clash of arms.

Whether or not the result is in the best national interests of the various countries concerned is a matter for debate, but it is still remarkable that Canada, during the three years and more that it has been at war, has received about three hundred thousand immigrants, and that the last fiscal year witnessed a 50 per cent. increase over the previous year.

War, in fact, has failed to stop immigration. True, it has greatly reduced its volume; but, as a compensation, it has improved its quality. Instead of the 402,000 immigrants who entered Canada during the fiscal year 1912-13, only 75,374 entered in the year 1916-17; but there was an evident difference in the composition of the immigrating class. Instead of the four hundred thousand assorted human beings who clamored at our gates, of every nationality, trade, and condition of life, physique and mentality, we had last year seventy-five thousand who exhibited their faith in Canada by braving the dangers of reaching it, and—in the case of American immigrants, for the United States was not then at war—by leaving the haven of neutrality for the uncertainties of a country at war.

An organized campaign of mendacity, it must not be forgotten, was conducted by unseen interests in the United States previous to the entry of that country into the Allied ranks with the object of preventing American migration into Canada. It took the form, generally, of the dissemination of "reports," chronicling the imposition of heavy war taxes, the confiscation of land, the conscription of Americans, and the oppression of neutrals not openly sympathetic with the Allies. There is a great amount of credit due to the two hundred thousand sturdy Americans who refused to accept such puerile detraction, and, between August, 1914, and April, 1917, crossed the border to make their homes on belligerent soil.

War eliminated the curiosity seekers and revealed the really serious in intent, thereby purifying immigration of much that was inimical to progress, but was difficult to avoid without recourse to absolute mandatory prohibition. With the exception of 1915-16 (48,537 immigrants) immigration in 1916-17 was the smallest since 1903; but, nevertheless, it comprised 22,715 farmers, a percentage of 30. In 1912-13 the percentage was 28—only 2 per cent. difference, it is true, but sufficiently encouraging in a change that takes years to accomplish. In 1916-17, only 31,440 declared their occupations as being general laborers, mechanics or clerks as against 218,582 in 1912-13—42 per cent. against 54 per cent. An upward tendency manifested itself, even in the westernization of immigrants. In 1916-17, 27,539 (37 per cent.) stated upon arrival, or showed railroad transportation proving, their destination as the prairie provinces, against 137,033 (34 per cent.) in 1912-13. It is the prairie provinces that need the immigrant, not the East, and to see him on his way there instead of being stranded in Montreal or Toronto is not the least remarkable happening of the present unusual condition.

As would have been expected, British immigration has been very small in volume. The following table shows the decline from the bumper year, 1912-13. It is a little misleading, perhaps, in regard to the first year of war, owing to the fact that, the fiscal year beginning April 1st, the major part of the immigration season—the spring and early summer months—is not separated from the period of collapse from August 1st; but it will illustrate how the war has reduced British immigration to the lowest since 1899:—

Year ending. March 31st.	Total.	British.	American.
1913	402,432	150,542	139,009
1914	384,878	142,622	107,530
1915	144,789	43,276	59,779
1916	48,537	8,664	36,937
1917	75,374	8,282	61,389

Of the British immigrants in the last year, 1,803 declared their occupations as agricultural; of the Americans, 20,822. Of the other nationalities, the greatest immigrant class has been Newfoundlanders (1,243) and Italians (758). To bring these figures down to date, to illustrate the marked revival in American immigration, it can be added that during the first ten months of 1917, 33,134 United States immigrants entered western Canada—an immigrant being a person who states his intention of living permanently in a country—bringing with them $4,932,190 in cash and $1,488,808 in effects. These totals are more than double those of the same period of 1916 and nearly four times those of the same period of 1915.

If, as J. Obed Smith, commissioner of Canadian immigration in London, once declared to the writer, the personal value of each immigrant to Canada, represented by his wealth-producing power, is $1,200 per annum, it is a fact that must not be allowed to escape observation that Canada, since it has been engaged in war, has actually imported a total of about $360,000,000 of wealth-producing power.

The cause of the increased American immigration has, perhaps, been threefold. It represents, of course, the consummation of the advertisnig efforts of the Dominion; but these three causes, although embodied in the advertising, have really an independent origin. First, here was the enormous Canadian harvest of 1915, as a result of which western Canada's extraordinary wheat average of 29 bushels per acre received very widespread publicity in the United States, which has only 17 bushels. The immigration statistics for the fiscal year, 1916-17, which comprised the whole of the summer of 1916, show how rapidly the American market responded to this leading publicity feature.

Activity in Agriculture.

Secondly, there has been the universal activity in agriculture as a result of the scarcity of food and the prosperity of the agricultural class. This boom has nowhere been more pronounced than in western Canada, whose farmers are walking examples of the unexpected prosperity that has come to the man on the soil. Concurrent with this has been the advertising of the cheapness of western land. Selling prices of Canadian Pacific Railway land in 1916 averaged only $16.12 per acre, and Hudson Bay lands only about $18, which prices, in comparison with prices in the United States, have not escaped the land-hungry man. Thirdly, the demand for farm labor in the west, both in spring and autumn, and the high prices paid for it, have attracted a great number of foot-loose men, whose occupations have been more or less close to the soil. To get these men, the Canadian government lent its assistance in the shape of advertising campaigns; and a very large percentage of these imported laborers have remained in the west, buying lands or filing on homesteads.

Immigration propaganda is still being continued in London with hardly unabated force. Advertising is still continued both by the Canadian government and by the various parties interested in the immigration business—and this, withstanding the heavy demands upon the Canadian government, the Canadian Pacific, and every other Canadian interest in London, with office organization and space for various forms of personal service in the ranks of the Canadian forces. There could scarcely be a more convincing belief in advertising as a means of creating future "goodwill" than that the Canadian government still buys advertising space in order to stimulate a desire—intangible and complex at the best of times—in the minds of those who, for the present, owing to military necessity, constitute an absolutely non-responsive market.

Future of British Immigration.

What will be the future of British immigration is difficult to say, bearing in mind the uncertain quantity of discharged soldier movement. Only a vague outline of the subject could be attempted; but it is fairly safe to hazard a guess that it will be composed largely of non-agricultural immigration. Every European country is going to offer the brightest possible inducements to keep its agriculturists and would-be agriculturists at home. The war has created amongst other problems, entirely new considerations of nationality, and it is obvious that if Canada is to specialize in agricultural immigration, it must go outside the British Isles. The United States will in the future be the biggest immigration field, and next to it, probably, will be the Scandinavian countries. Nationality, indeed, is only one of the vexed questions that will arise for early settlement. The attitude of labor—more especially, organized urban labor—is, for example, an uncertain factor that already casts its shadow upon the future. The workingman is already awake to the possible depreciation in the labor market consequent upon the arrival of a great mass of discharged soldier labor that may find its way to the farm, but, on the other hand, may fail to get farther than the cities. It is impossible to do more than mention this important aspect of post-bellum immigration; but, as was suggested at the beginning of this article, we are all apt, when predicting large immigration after the war, to do so somewhat superficially, without regard to what the active resumption of immigration, even on the old basis, would actually mean.

DOMINION PERMANENT LOAN STATEMENT

Position of Assets and Liabilities—Fair Return for Shareholders and Depositors Expected

The following interim statement of assets and liabilities of the Dominion Permanent Loan Company, Toronto, which closed its doors two weeks ago, has been issued by Mr. G. T. Clarkson, of E. R. C. Clarkson and Company, interim liquidator for the company:—

LIABILITIES.

Due to Creditors—		
Debentures, with accrued interest		$2,555,312.39
Savings deposits		208,974.5
Unclaimed dividends		45.00
Sundry Creditors		5,282.18
		$2,769,614.13
Due to Shareholders—		
Permanent stock subscribed	$1,410,700.00	
Prepaid shares subscribed	118,400.00	
		1,529,100.00
Total		$4,298,714.13

ASSETS.

Cash on hand and in banks	$ 7,705.19	
Call loans	825.92	
Loans against shares of company	320.00	
		$ 8,851.11
Loans secured by mortgages—valued at—		
In Ontario	$ 2,968.78	
In British Columbia	7,684.48	
In Manitoba	2,390.76	
In other Western Provinces	8,465.33	
In Nova Scotia	8,020.14	
Of Provincial Loan Company	9,007.27	
		38,536.76
Due by Shareholders:		
On Permanent shares	273,121.97	
On prepaid shares	45,878.43	
		319,000.40
Real estate owned by the company, valued at		13,155.00
Advances to Grand Forks Townsite Company and Spokane and British Columbia Railway, including interest charged thereupon, book value		4,389,520.91
Office furniture and motor		1,250.00
Total		$4,770,314.18

Those in control of the liquidation proceedings are of the opinion that the Spokane and British Columbia Railway and townsite properties, which represent the most substantial part of the company's assets, are good assets. It is hoped to realize upon them and to deal with them so that a very fair return will be obtained for the debenture holders and depositors of the Dominion Permanent. Under present conditions, it is entirely impossible to forecast the result of negotiations which will be commenced in respect to these properties, or to predict how these matters will ultimately be settled. The railway was built as an investment, when the mines at Republic, Washington State, were active. It is said to run through good territory, from Republic to Grand Forks. The section from Republic to Spokane is not served by a railway, and that section is also considered sufficiently good to support a railroad. This is the unconstructed portion of the line in which the Dominion Permanent is interested. The railway company has met with difficulty in financing the construction of that part of the road. With the continuance of the war and the disturbed railroad situation, its opportunities for financing the new construction are poor.

In connection with the townsite lands, it appears that the Dominion Permanent advanced moneys to the Grand Forks Townsite Company, which in turn advanced funds to the railroad company for the construction of its undertaking.

It is improbable that the Dominion Permanent Loan Company has advanced more than $1,750,000 of actual capital, but it has been crediting interest from year to year upon such advances and carrying this to the credit of profit and loss account, out of which dividends have been paid. In view of the condition of affairs, it is therefore a question whether the company actually earned the profits out of which it is authorized to pay dividends. That is a matter which will undoubtedly be inquired into during the liquidation proceedings.

ONTARIO'S WORKMEN'S COMPENSATION ACT

Chairman Price Explains How Assessments are Determined—Experience of Previous Years

The workings of the Workmen's Compensation Act of Ontario and the determination of assessments for the different classes was the subject of an address by Mr. Samuel Price, chairman of the Ontario Workmen's Compensation Board, at the annual convention of the Canadian National Clay Products Association, at Toronto. Mr. Price stated that under the present law the workman or his dependants are compensated in a larger number of cases than under the former law, the underlying principle being that the industry should bear a portion of the loss caused by injury to its workmen just as it must bear the expense of replacing broken machinery.

He continued:—"Among the other advantages of the new law are the speedy and inexpensive mode of payment to the workman; immunity of the employer from litigation and from what might be ruinous liability for damages; and the removal of a prolific cause of friction between workmen and employer.

"The questions to be determined in the allowance of compensation are usually few and simple, and the amount in the great majority of cases is fixed by the act or is merely a matter of computation.

Must Notify Board.

"The workman is required to notify the accident promptly to his employer and the employer to notify the board. Reports giving the necessary information for determining the right to and fixing the amount of compensation are required from the workman, from the employer, and from the attending doctor, further inquiry or investigation being made where it seems necessary. In ordinary cases the award is made within a few days after the receipt of the last report and payments go forward promptly, cheques for temporary disability being sent bi-weekly, and pension payments monthly.

"The employer is notified of every award made to any of his workmen and of every payment made for medical aid, and the board is always glad to receive from him any useful suggestion or information concerning the case.

"The industries covered by the new law (omitting railways and other industries under schedule 2) are enumerated in what is called schedule 1 of the act. They are divided now into 34 classes or groups.

"For assessment and compensation purposes each class stands upon its own footing. Each carries its own burden, except only that a small general fund, one per cent. per year, known as the Disaster Reserve, is set aside to assist in meeting any extraordinary call that may arise in any class.

"Separate accounts are kept of all assessments received and all compensation awarded for each of these classes. Any balance at the end of the year, after all credits and charges have been made, is carried forward to the credit or debit of the class. Each of the 34 classes of industry is thus in effect a mutual insurance association of the employers in that class.

Governed by Requirements.

"The rates for each class are fixed and the assessments made much in the same way as a municipality levies its taxes. They are governed by the requirements. The assessment is in the form of a rate or percentage on every $100 of pay-roll. The rates fixed for the year are intended to cover the burden of that year. At the beginning of the year an estimate of his probable pay-roll is obtained from each employer and he is assessed provisionally upon that estimate. At the end of the year the actual amount of pay-roll is obtained and the assessment is adjusted accordingly.

"In fixing the rate the experience for previous years is used as a guide. The amount of compensation and the amount of assessments in the class for the preceding year are ascertained, an estimate being made of the amount still remaining to be paid for accidents which by reason of continuing disability or for lack of reports have not been finally disposed of before the end of the year, and an estimate being also made of the extent to which the actual pay-roll statements received from employers at the end of the year will exceed the estimates given by them at the beginning of the year. In this way the total expenditure and the total income of the class for the year are arrived at as nearly as possible, and the sufficiency or insufficiency of the rate charged determined.

"If it is seen that the rate charged has produced sufficient money, or if the surplus or deficit is small, the same rate will be continued for the current year. If there is any considerable difference, the rate will be increased or decreased accordingly; and if the difference is large, the rate will also be altered retroactively for the prior year.

"Any surplus to the credit of the class remains in the class funds, and this is also taken into consideration in fixing the rate. Any additional matters, such for instance as medical aid which went into effect the middle of last year, must be provided for by making an estimate of the probable amount of expenditure therefor, and this must be considered in fixing the rate.

"Where there are different lines of industry in the same class, each bearing a separate rate, the experience in each separate line of industry is also considered, and if the situation calls for it the proportionate ratings as between the different lines of industry in the class are altered. As, however, each class in the schedule is an insurance group, all lines of industry in the class must share to some extent the good or ill-fortune of the class as a whole, and the rating for each separate line of industry cannot be made to depend upon the experience in that line of industry alone. The experience of the class as a whole must be considered. This is especially the case where the amount of pay-roll in any line of industry is small. To charge that line of industry with its own cost might leave a very excessive burden on its employers for one year while perhaps relieving them almost wholly from assessment another year. This would destroy the underlying insurance principle which is the basis of the system.

Was the Best Estimate.

"The first table of rates fixed for the different classes of industry upon the coming into force of the act in 1915, and before there was any actual experience to go upon, was merely the best estimate that could be made of the requirements with such assistance as could be obtained from other rating schedules. At the end of the first year it was found that a general reduction could be made. This was done in a number of cases retroactively; and the rates for 1916 were made upon the whole considerably lower than the original 1915 rates. The 1917 rates, while making adjustments in a number of cases, were, even with the allowance estimated to be necessary for the new medical aid provisions, only slightly higher upon the whole than the 1916 rates. It is hoped that in general little increase will be required for 1918, even with the full year's medical aid to be provided for as against the half-year's medical aid in 1917.

"For the manufacture of clay products the original rate in 1915 was fixed at 90 cents per $100 of pay-roll. In 1916 this was reduced to 60 cents. At the end of 1916 it was found that the experience for the class was not as good as had been expected, and the rate was raised retroactively to 90 cents; and a 90 cent rate was also fixed for 1917. It is hoped that this rate may still be sufficient for 1918, but this cannot be definitely settled until the experience for the past year has been fully tabulated.

"Comparing this 90 cent rate with the rates elsewhere, we find that Ohio charges $1.45; Michigan, $2.06; New York, $2.91; Pennsylvania, $1.31; Illinois, $2.37; Wisconsin, $2.32; Indiana, $2.25; Kentucky, $1.97; Colorado, $1.53; Washington, $1.50; California, $2.30.

"The way to keep the rate low is to avoid accidents. This will now be a matter of special individual concern to each employer, inasmuch as under the system of merit rating which is to be adopted the employer having a bad accident experience will pay a higher rate of assessment than the employer whose accident experience is good. The adjustment will be made after the accident experience of each employer has been finally ascertained.

For Medical Aid.

"It is a gratifying feature of the administration of the Ontario Act that, apart from the contribution for the expenses of the employers' accident prevention associations, practically all the money contributed by employers goes to the workmen or their dependants as compensation or is paid for medical aid. For the year 1917 the total amount contributed by employers toward the expenses of administration will be less than one and one-sixth per cent. of the amount of compensation awarded. During the year awards of compensation amounting approximately to $2,900,000 involved an administration expense to employers of only $33,000, the remainder of the expense being borne by the province.

"The system of state insurance for compensation to workmen, to which the Ontario Act belongs, is one of recent growth. In 1911 it existed in only one state upon the continent. Now it prevails in fifteen of the United States and three of the provinces of Canada. Employers and workmen alike are interested in making it a success. Properly carried out it should be cheaper, more beneficial, and more equitable than any other system. Profits and unnecessary expenses are eliminated. The administrative body in such a system has no personal motive to give the workman or his dependants less than they are entitled to and no motive to charge the employer more than he should pay."

METHODIST CHURCH MAY CARRY FIRE RISKS

It is proposed that the Methodist Church establish a fire insurance company of its own, to carry risks on the church property held in Canada, Newfoundland. Japan and China, under the Canadian General Conference. Rev. Dr. Chown, the general superintendent, has prepared statistics supporting the scheme. He says: "The value of the property of the Methodist Church, as reported to the last General Conference, was $41,905,245. Deducting land values, there is insurable property worth $31,241,584. Upon this we are carrying insurance to the extent of $15,729,517, or about 50 per cent. of its estimated value. The manager of many an insurance company would be happy if he could step into a business of such dimensions. It should not be beyond the ability of the Methodist Church to provide for intelligent and economic administration of fire insurance as a branch of the Church's affairs.

"Fire insurance is not in general an unprofitable business. It usually earns dividends for its stockholders. These should be earned and applied to the support of worn-out ministers' fund or some other worthy object."

HOME INSURANCE COMPANY

Not only is the Home Insurance Company, of New York, known by its exceptional size—for it is the largest fire insurance company on this continent—but it is known also for its unusual strength and the excellent service it gives to clients. The company was incorporated in 1853, and since that time has built up an enviable financial position. At the end of the past year its cash assets exceeded $44,000,000 and its net surplus over liabilities was more than $13,000,000. Its surplus as regards policyholders is more than $19,000,000. The company's authorized capital is $6,000,000, all of which is paid up. According to the latest statement, the liabilities are approximately $25,000,000.

The Home Insurance Company has always had a serviceable organization, which has catered to the needs of both large and small insurers. In Canada, where it has done business for sixteen years, it has a splendid staff. Mr. Fred. W. Evans is the company's chief agent and attorney for the Dominion, with headquarters at Montreal. Mr. A. M. M. Kirkpatrick is the chief agent for the province of Ontario, with office at Toronto. Mr. A. C. Baillie acts as special agent for Canada, with headquarters at Winnipeg, and Mr. F. W. Underdown is special agent for the province of Quebec. In 1917, the company's total income in Canada amounted to over $2,000,000, representing the various lines transacted in this country, namely, fire, automobile, hail, windstorm, sprinkler leakage and explosion insurance. The income last year showed a substantial increase over that of 1916.

According to the Dominion government returns for 1916, the company had total assets in this country of $1,383,907, and this sum was materially increased in 1917. Among its holdings on deposit with the Dominion government at Ottawa are $1,283,733 par value of Canadian securities. In addition, $250,000 was subscribed by the company to our Victory Loan last fall. Mr. E. G. Snow is president of the Home Insurance Company and A. M. Burtis is secretary. The Canadian organization has achieved excellent results. They reflect in Canada the policy of the home office in New York, which has built up such a splendid business during the past sixty-five years.

NEW BRUNSWICK BORROWS $1,000,000

The province of New Brunswick is making an issue of $1,000,000 through Messrs. A. E. Ames and Company, Toronto. The bonds are 10-year sixes, dated February 15th, 1918, and due February 15th, 1928. The issue price of 99.08 and interest gives a yield to the investor of 6.18 per cent. The bonds are payable in gold, both for principal and interest, in Canada and the United States.

WORK ON FIRST STEEL SHIP

Fabrication and assembling of materials for the first of the fleet of merchantmen to be built by the Dominion government has been commenced, and a similar work for two other vessels will shortly be undertaken, according to Ottawa despatches. The first ship, which will be a steel steamer of 4,350 tons burden, will be laid down at the Canadian Vickers yard at Montreal. A second of 8,200 tons will follow at the same establishment, and, it is expected, a contract for a third ship of 3,800 tons will soon be made with the Collingwood Shipbuilding Company, which has a vacant berth in its yard. It is hoped that the ships to be built at the Vickers yard will be in commission by September next.

The government's shipbuilding programme contemplates the laying down of the keels of some forty ships to June, 1919.

Arrangements have been made whereby the government is assured of a supply of ship plates and steel materials for its shipbuilding programme to June, 1919.

WESTERN LIFE ASSURANCE COMPANY

A substantial volume of business was written by the Western Life Assurance Company, of Winnipeg, last year, the new policies issued and revived amounting to $1,054,750. The total insurance in force at the end of the past year was $2,091,899, an increase of $495,430, or 31 per cent., over the business of the previous year. As is the case with other insurance companies, the death losses of the Western Life included a substantial amount as the result of the war, $5,250 of total death claims of $8,309 being due to war.

The company received cash revenue from premiums and interest amounting to $78,058, an increase of $26,195, or 50 per cent., over 1916. A large sum of $115,739 was received from stockholders. This is a satisfactory feature of the financial statement. There is a balance of $36,945 owing on capital stock notes and a balance of $15.024 owing on stock premium notes. The company's total assets are shown at $193,153, of which mortgages represent $20,778; policy loans, $12,021; bonds and debentures, $78,849; cash on hand, $66,824; and net outstanding and deferred premiums, $11,093. Taking this total of assets, there is a surplus of $70,203. There are further assets which are not reckoned in the above figures. These include office furniture and equipment, bills receivable, capital called and paid, the balances owing and interest accrued on stock notes, and a small amount of agents' balances. If these assets are included, the total surplus to policyholders is increased to $134,445.

The reserves held for the security of policies in force, computed on the Om. (5) table of mortality, with interest at 3½ per cent., being in accordance with the Dominion Insurance Act, now amount to the sum of $110,917, an increase of $20,815, or 23 per cent., over 1916.

Mr. Adam Reid is managing director of the company, and has been energetic and enterprising in the always difficult work of building up a new life insurance company. The Western Life recently obtained a Dominion license. Mr. A. E. May, of Edmonton, is president of the company.

Mr. Adam Reid, managing director and founder of the Western Life Assurance Company, Winnipeg, was presented, at the company's annual meeting last week, with an illuminated address and a gold watch, suitably inscribed, by the field force, the branch office and the head office staffs of the company. The address expressed their appreciation of his services in the past and pledged their loyalty and confidence in his leadership for the future. The presentation was made to commemorate the granting of a Dominion license to the company.

INCOME TAX

According to the income Tax Act which operates in Canada for the first time this year, returns must be made to the Dominion government before February 28th. The taxes are payable on June 1st next. Returns of income in 1917 must be made by all married persons in receipt of income in excess of $3,000 and unmarried persons in receipt of incomes in excess of $1,500. The law applies to all residents of Canada within that category and all corporations operating in the Dominion. There has been delay in issuing the necessary forms on account of exceptionally heavy work in the government printing office. Because of this delay, the date by which returns should be made, namely, February 28th, will be extended. Copies of the Act may be obtained from the Department of Finance, Ottawa. Useful summaries and comments regarding it have been issued by the Royal Bank of Canada, Montreal, and the Bank of Hamilton, Hamilton.

In its compilation, the Bank of Hamilton points out that if one is the member of a partnership, or syndicate, one pays on one's share of the partnership, or syndicate, profits (the actual partnership is not taxed) and is liable to taxation on profits made but not distributed, as well as on what one actually withdrew during the year.

If in addition to salary, or fixed income from a trustee, one has real estate affording a revenue, expenses such as interest on mortgage, taxes, insurance, repairs and possibly reasonable depreciation on buildings (but not depreciation on the general value) may be deducted from the gross revenue, and on what is left of the income derived therefrom pay tax.

If one has a fixed salary and unproductive real estate, the cost of carrying this cannot be deducted from the income by way of salary, but if there are other sources of income one may, as far as they go, charge the expense of carrying the unproductive asset to them.

If outside salary or regular income a person invests, say, in bonds or stocks, profit on the capital invested is not taxable, nor loss deductible from income, but interest or dividends (unless in the latter case the company declaring them has paid tax under the Act, or in the former case they be Dominion bonds issued free of tax) received therefrom are taxable. As in the case of the business profits tax, many queries will arise but the act should be working smoothly in the near future. In the meantime, enough is known of its provisions for the public to prepare to complete their forms, as soon as received and return them promptly to the authorities.

INVESTORS AND PEAT

The shortage of fuel has revived interest in the proposal to manufacture peat fuel. Already there are signs of the organization of many companies to develop the peat bog areas of Canada. Appeals will probably be made to the public for capital for this purpose. In that event, investors will do well to remember that the Dominion government, through the mines branch of the Department of Mines, thoroughly investigated the manufacture of peat fuel some years ago. The investigation proved that, as the water in peat is in what is called the "colloidal" form, it cannot be expelled by pressure. Similarly, processes for expelling the moisture by the application of artificial heat will inevitably fail on account of excessive cost.

In a timely warning, the Commission of Conservation, Ottawa, states that it is because such methods of manufacture have been stubbornly adhered to in the past, that so much money has been lost in attempts to create a peat fuel industry in Canada. Raw peat contains from 80 to 90 per cent. of water. Pressure will not reduce this to less than 80 per cent. The only economical method for expelling the moisture is by the action of the sun and wind. The chemical properties of the raw peat foredoom to failure any process of manufacture utilizing pressure to reduce the moisture content.

REBATING AND INSURANCE

Various insurance departments have been advised that insurance agents have made a practice of agreeing with the insured before the issuance of the policy to accept goods in lieu of cash in the payment of premiums—that is, "to trade out the premium." The Minnesota state insurance department has been asked to give its opinion as to whether or not this constitutes rebating within the meaning of the law. The Minnesota law provides that no agent, special agent, broker, solicitor, employee, intermediary or representative of any insurance company shall permit any advantage or distinction in favor of any insured with respect to the amount of premium on any policy or shall offer to pay or allow directly or indirectly as an inducement any rebate on the premium on the policy, or any valuable consideration or inducement not specified in the policy, or to give, sell or purchase or offer to give, sell or purchase as an inducement to insure or in connection therewith anything of value whatsoever not specified in the policy.

The law further provides that no person shall receive or accept from any agent, special agent, broker, solicitor or employee, intermediary or representative or any other person any rebate or premium, special favor or any valuable consideration or inducement not specified in the policy of insurance. Any person violating any of the provisions of the law above referred to is punishable by fine of not less than sixty nor more than two hundred dollars.

The Minnesota commissioner of insurance is of the opinion that any agreement entered into by an insured and an agent whereby the agent agrees to take from the insured goods in lieu of cash in payment of the premium upon any policy would be a valuable consideration or inducement not specified in the policy and would therefore be in violation of the law. Where such an agreement was entered into the agent and the insured would be equally guilty of violating the law.

Occasional rebating is reported among Canadian insurance men. The practice, however, has almost ceased. The good work of the life underwriters' associations of Canada has been largely responsible for the improvement. During the past few years these associations have raised the standard of ethics in the life insurance business to a high plane. At the same time, the calibre of life insurance salesmen has rapidly improved. To-day the Canadian life insurance salesmen are, as a group, among the most straightforward and capable business men of the country.

PROVINCIAL RESOURCES

One of the most interesting statements in the budget speech of Hon. Edward Brown, provincial treasurer of Manitoba, referred to the suggested transfer by the Dominion to the province of its natural resources. This is a matter in which he has been active and the general subject will probably be discussed by the various provincial premiers in conference at Ottawa this week. Should this transfer take place, Manitoba will acquire title to 26,000,000 acres of lands held by the Dominion, in addition to large mineral resources, timber and fisheries. Mr. Brown emphasized the necessity, in view of these facts, of establishing now the principle in law that only the interest arising out of the sale of provincial assets should be treated as revenue, and that the principal moneys shall be placed in a special fund, ear-marked for investment, and invested so as to assist in developing the province and building up its industries.

Mr. Brown anticipated that, were this legislation passed and followed by the receipt by the province of its natural resources, during a period of 10 to 20 years of activity in these resources, a fund could be built up by way of mortgage investment that would not only be equal to but would make entire provision for the liquidation of the present provincial debt, at the same time aiding materially in settlement, production and in stimulating the trade of the province. This is an ambitious programme and naturally some difficulties will be met. However, it is a worthy plan for this great western province, which led the way in per capita subscriptions to our recent Victory Loan.

FINAL RETURNS OF CANADA'S VICTORY LOAN

	Population.	Number of subscribers.	Per capita.	Amount subscribed.	Subscription per capita.
Alberta	496,000	56,117	1 in 8.8	$ 16,515,150	$33.29
British Columbia	394,000	50,563	1 in 7.8	18,814,700	47.75
Manitoba	555,000	78,856	1 in 7.0	32,326,600	58.25
New Brunswick	350,000	26,469	1 in 13.2	10,463,350	29.89
Nova Scotia	508,000	39,521	1 in 12.8	18,588,150	36.59
Ontario	2,582,000	363,000	1 in 7.11	204,185,400	79.08
Quebec	2,263,000	126,534	1 in 17.88	94,287,250	41.66
Prince Edward Island	93,000	5,300	1 in 17.54	2,331,350	25.07
Saskatchewan	650,000	73,675	1 in 8.82	21,777,050	33.50
	7,891,000	820,035	1 in 9.62	$419,289,000	$53.13

The above are the final returns of the Canadian Victory Loan, issued in November last. The total subscriptions of $419,289,000 include $6,000,000 of conversions which have not yet been allocated to the various provinces, and adjustments made accordingly.

There were 820,035 subscribers to the Loan as compared with 40,800 subscribers to the previous loan. One in every 9.62 of our population subscribed to the Victory Loan, a remarkable record. In per capita subscriptions Manitoba did best with 1 subscriber to every 7 of population, followed by British Columbia, 1 in 7.8, and Ontario 1 in 7.11. Ontario furnished $204,185,400, or nearly half of the Loan. The total subscriptions were equal to $53.13 for every man, woman and child in the Dominion. If the war continues it will be necessary to float another large domestic loan, probably for as substantial an amount as the Victory Loan. This, however, is not a matter for consideration until possibly November or December next, except that in the meantime it is vital to the winning of the war that thrift should be practised and money saved for investment in our war loans.

MANITOBA'S BUDGET

Hon. Edward Brown, Provincial Treasurer, Reports Deficit of Only $184,000

The Manitoba government concluded the fiscal year ended November 30th last with a deficit of only $184,000. Analysing the provincial statement of assets and liabilities, Hon. Edward Brown, provincial treasurer, stated in his budget speech that following the plan adopted in the new system of accounting, the assets were classified as capital, current and deferred. They present a total, speaking in round figures, of $70,000,000, as compared with $66,500,000 last year, or an increase of $3,500,000. This increase is made up principally of an increase in the school land funds held in trust by the Dominion of some $200,000; an increase in the public buildings and public utilities of the province of $1,500,000, and a new item, the claim of the province against Thos. Kelly and Sons of $1,400,000, which includes interest to the date of the statement.

"Dealing with the other side of the ledger," said Mr. Brown, "namely the liabilities, we find that the bonded indebtedness of the province is made up of $18,000,000 of revenue-producing debt, which pays its own way, represented by the telephones, elevators, drainage and judicial district bonds, and $14,000,000 of non-revenue bonds, represented by public buildings. This debt shows an increase of $2,000,000 during the year, which was authorized at the last session of the legislature, and was disposed of on a basis of 5½ per cent. A considerable amount of this, however, is still on hand.

Two Treasury Bills.

"In addition to the increase in the bonded debt of the province there appears in the statement of current liabilities two treasury bills for $500,000 and $300,000 respectively, both of which have since been paid. The first-mentioned of these was issued for the purpose of supplying seed grain to the farmers, and the further purposes of advancing money to farmers to buy stockers and further of buying the wool product of the province in order that the highest price might be obtained for the aggregate quantity.

"In spite of high money rates the money for seed grain was advanced to the farmers of the province for the first time in our history at a rate of 5 per cent. This rate was made on the distinct understanding that repayments would be made by the end of the fiscal year, and it is a matter of some gratification to me that on January 2, when payment of the treasury bill had to be made of $500,000, we had actually in the bank by way of collections the sum of $183,000. Since that time the balance has been entirely wiped out.

"Of the amounts advanced for stockers only one account is at present unpaid, and we have the satisfaction of knowing that the stockers made money for their owners. This little item of business cost the province some $4,600, made up principally of exchange in paying the treasury bill $1,750, and the difference between the deposit rate of interest, namely 3½ per cent. and the 5 per cent. we paid for the loan during the period of collection. The other treasury bill mentioned in the statement, namely $300,000, was issued for the purpose of supplementing the revenue previous to the receipt of the Dominion half-yearly subsidy and has since been repaid.

Wrote Down Indebtedness.

"While we show an increase of $2,000,000 in our bonded indebtedness we wrote down our bonded indebtedness by $440,000 being the profit arising out of our bond conversion scheme for the benefit of the British treasury, and which appears for the first time in this statement. We fully expected a year ago to have carried out a further conversion of our sterling debt, but the entrance of the United States into the war closed the New York market to foreign securities and prevented us from doing so. If we were to deduct from this item the entire amount of discounts which have arisen out of the sale of our securities since the war period, putting these securities on a net 5 per cent. basis, we would still have a handsome balance. This cannot be said of the record made by any other province in Canada.

"Without going into further details of the assets and liabilities we find the surplus of assets over liabilities to be $34,000,000, or a gain of $950,000 since the last statement.

"The total amount of the provincial bonds or stock which has been acquired by our sinking fund has been definitely allocated in reduction of the telephone debt, namely, $455,530.

"Before the fiscal year closed, following our established custom, we advertised for claims against the province for 30 days, and that we actually succeeded in paying every claim whatsoever outstanding, except a sum of $17,000, which sum is shown in the balance sheet as 'unpaid accounts.' We have reckoned accrued interest on our bonded indebtedness to the date of the statement, charging ourselves with this amount, and have adjusted all revenues paid in advance, crediting ourselves only with the amount earned to the date of the statement, and we have also charged ourselves with all grants partly earned but not actually due at the date of the statement, these three items involving an amount of $550,000, which are items governments as a rule do not take cognizance of.

Unpaid Revenue.

"We have outstanding unpaid revenue as follows:—

Interest past due on school lands contracts held at Ottawa	$ 521,122
Interest past due on provincial land contracts	334,445
Amount outstanding of succession duties	278,178
Making a total of unpaid revenue of	$1,133,745

"We have not taken this unpaid revenue into our operating account at all. We not only charge ourselves with all unearned income and grants partly earned but not due, and with all unpaid bills, but we do not take into account on the other side all this unpaid revenue, merely showing it as a deferred asset in our balance sheet of assets and liabilities. The estimates approved by the legislature at the last session foreshadowed a probable deficit of $250,000.

"On a strictly revenue basis there is an adverse balance of only $184,175 for the fiscal year ended November 30 last.

Cash Balance.

"The following is a concise statement of the cash balance held by the province as at November 30, and upon which the province is receiving interest in every case at the rate of 3½ per cent. on the daily balances:—

Cash to credit of consolidated revenue ...	$ 191,437
Cash, seed grain and other collections ..	447,377
Unexpended capital for public buildings ..	1,473,806
Cash in hands municipal commissioner, judicial districts	406,003
Special provincial funds (trust accounts)	952,749
Cash in treasury of telephone commission	392,115
Total cash	$3,863,487

"The following investments are held within the province by the treasury department, in addition to the above cash:—

Province of Manitoba debentures	$1,000,000
Provincial bonds held by telephone commission	250,000
Provincial bonds held as investment for judicial district funds	50,000
War loan bonds telephone commission ...	100,000
War loans held for drainage districts	207,500
War loans held for trust account	36,920
Bonds of the municipality of Franklin	96,000
School district debentures	65,198
Town of Emerson bonds	24,315
Manitoba Farm Loans Association stock ..	100,000
War loan bonds held for town of Pipestone	18,010
Provincial bonds redeemed by sinking fund, and allocated in reduction of telephone debt	455,530
	$2,403,473

or a gain in investments over the previous year of $471,371.

"While the bonded indebtedness of the province has been increased by $5,000,000, the investments of funds within the province, together with the cash in hand amount to over $6,000,000, and by means of legislation introduced this session, it is proposed to increase the investments from year to year until such time as these amount to and provide for the entire debt of the province."

Hon. Frederic Nichols, Toronto, president of the Canadian General Electric Company, has been elected to the directorate of the United States Fidelity and Guarantee Company.

LIFE INSURANCE LEGISLATION

Differences in Provincial Legislation Affecting Life Insurance Contracts in Canada

BY WILLIAM B. TAYLOR, B.A., LL.B.

(Conclusion.)

Dominion of Canada.

Legislation under the Parliament of Canada affecting Life Insurance. Relates to those Insurance Companies licensed by the Insurance Department of the Dominion or incorporated under the laws of Canada.

The provisions of the Insurance Act of the Dominion, assented to on September 20th, 1917, do not relate to contracts of insurance in the same way as the legislation of the other provinces. The companies licensed or incorporated under the Dominion law carry out the provisions and restrictions of the Insurance Act of Canada.

Relating to Life Insurance Companies Generally.

The license of a company expires on the 31st day of March in each year but may be renewed from year to year; such renewal may be subject to any qaulification or limitation.

Policy Contract.

1. The policy contract must be contained in the policy and no provision shall be incorporated therein by reference to rules, by-laws, application or any other writing unless they are endorsed upon or attached to the policy when issued.

2. To furnish any estimate or statement of future dividends or surplus is forbidden.

3. No rebates or discrimination or distinction of any kind in favor of individuals of the same class in equal expectation of life in the amount of premiums charged or dividends payable under the policy shall be permitted. Penalties are imposed for breach of these conditions.

4. Each company shall deposit with the superintendent of insurance a copy of its rates for all plans of insurance.

5. Surplus on participating policies shall be ascertained and distributed at not longer intervals than every five years, provided that, where the company issues deferred dividend policies, it shall ascertain and apportion once in every five years to each class thereof the share in such surplus to which such class is equitably entitled, and the total sum of the shares so ascertained and apportioned shall be charged and carried in the company's accounts like a reserve until such fund has been actually disposed and paid to the policyholder entitled.

6. Where the policyholder upon receiving notice of the allotment of surplus to his policy does not elect to take any of the options given in the notice within three months after the date of mailing of the notice, the surplus shall be applied by the company to the purchase of a paid-up addition thereto, except in the case of term or industrial policies, where it is applied in payment of any premium that may be payable.

Policy.

1. No policy of life insurance shall be delivered in Canada by any company until a copy of the policy form has been sent by registered mail to the superintendent of insurance.

2. Every policy shall contain the following privileges:—

(a) Thirty days' grace for payment of premiums except in the case of the first premium. A company may, however, charge 6 per cent. interest during the days of grace.

(b) The insured may, without the consent of the company, engage in active service of the Militia of Canada. Notice is required to be given by or on his behalf to the company within 90 days after date of such engagement and such extra premium is to be paid during the continuance of such service as the company shall fix in pursuance of the terms of the policy.

(c) The policy shall be incontestable after two years from its date except for fraud, non-payment of premiums or for violation of the condition respecting military service and except as to adjustment of the amount on account of understatement of age.

(d) The policy and the endorsements or attachments thereto constitute the entire contract and in the absence of fraud all statements are deemed representations and not warranties.

(e) In case of understatement of the age the amount payable shall be such as the premium would have purchased at the correct age.

(f) A statement of surrender values, paid-up insurance or extended insurance to which the policyholder is entitled.

(g) After three years' premiums have been paid the company shall loan 95 per cent. of the surrender value of the policy at a rate of interest not exceeding 7 per cent. per annum to the insured upon production and assignment of the policy to the company, under form to be approved of, but after which the policy is to be returned to the policyholder if he so requests.

(h) A table showing surrender and loan values.

(i) A table showing the amount of instalment and annuity payments if provided for in the policy.

(j) Provision for renewal of the policy within two years from date of lapse under condition.

[The articles of Mr. Taylor, of which the above is the sixth and concluding, will be reprinted by *The Monetary Times* in pamphlet form, constituting a valuable reference. Orders are being received now.]

ALBERTA'S FUR INDUSTRY

That Alberta will this year have a fur production amounting to between $10,000,000 and $15,000,000 is the assertion of H. A. Simpson, of Calgary. This is a large increase over previous years, and the production this season is developing an export business that a few years ago was undreamed of It was estimated that 50,000 coyote pelts alone will have been shipped out of the province this year before the summer comes, and 1,500,000 rat hides. A great percentage of the rat skins are going to England to be used by the militia in lining coats for men in the aviation division, while the United States vies with England in bidding for the coyote hides. Five years ago $1 to $1.50 was considered a fair return to the trapper for coyote hides; this year the average for one hundred skins sold by one trapper was $15.50, while some sold at $18 in their raw state.

MANITOBA PUBLIC UTILITIES

The sixth annual report of the Manitoba Public Utilities Commission was tabled in the provincial legislature on February 4th.

The commissioner considered it advisable to address all municipalities and corporations operating or intending to install utilities, calling attention to the provisions of the Public Utilities Act, which require that authority be first obtained from the commission before issuing any stocks, certificates, bonds or other evidences of indebtedness (payable in more than one year from date thereof).

The purpose of this provision is to see that convenience and necessity warrant the proposed expenditure; that the securities to be issued are compatible with the value of the properties covered by same, and the application of proceeds to said purpose, to prevent the diversion of capital funds from proper channels, and the increasing of a debt to refund prior indebtedness. Obviously, securities so regulated and approved by the commission would be more readily negotiated, and have an enhanced market value.

The importance of establishing a uniform system of accounting for public utilities has been demonstrated in the case of the city of Winnipeg, in respect of its hydro-electric and waterworks utilities, as shown in the published annual reports.

The principle was also applied by the commission to the Winnipeg Electric Railway Company and subsidiary companies, which were ordered to separate the various utilities in accordance with a prescribed classification of accounts prepared by the commission. This work was accomplished by an eminent firm of engineers and accountants, and the annual statements of the several utilities as at December 31st, 1916, bear ample testimony to the value of the commission's requirements. The statements have not been analyzed and are given with reserve. The system is being gradually applied in the case of lesser utilities throughout the province, but this commission is not satisfied with the progress made. To obtain the desired results it will be necessary to add an accounting department to the activities of the commission.

BRANCHES AND CONNECTIONS THROUGHOUT CANADA

ONTARIO HAS LARGE SURPLUS

Hon. T. W. McGarry Presents His Budget—Provincial Borrowings

In three and a half years of wartime, which called for many unusual disbursements, Ontario piled up a surplus of over $3,000,000, including a net surplus of $1,751,374 for 1917, the largest in the history of the province, according to the budget speech in the legislature on Tuesday, by the Hon. T. W. McGarry, provincial treasurer.

"A statement of the first year of the war, a review of the year 1913-14, discloses the fact that there was a deficit of $697,928.58," he said. "As explained at the time, that deficit was due partly to the refusal of certain companies to pay taxes and partly to the fact that we had expended the sum of $294,000 in advances for flour for Great Britain and the Belgian people.

"In the following fiscal year, that of 1914-15 (the first full year of the Hearst administration), we were able to announce a surplus of ordinary receipts over ordinary expenditures of $271,370.

"Last year, when presenting the financial sheet for the fiscal year 1915-16, there was announced 'the greatest surplus that had been,' namely, $1,134,996.74. During 1917 our total ordinary receipts amounted to $18,269,597.23, and our total ordinary expenditures were $16,518,222.64, leaving a net surplus on the year's operations amounting to $1,751,374.59.

Reduced Net Debt.

"Not only have we the greatest surplus ever announced in this House, but we have, in addition, reduced the net debt by $1,216,301.70, and have expended on capital account $5,155,000 in excess of the amount borrowed for these purposes. Altogether we have expended on capital account the sum of $10,155,245.35. Our total borrowings were $5,000,000, so that, as stated above, we expended over $5,000,000 out of ordinary revenues and the balance carried over from last year.

"Of this sum of $10,000,000, $5,700,000 was for Hydro-Electric, $410,000 for Timiskaming and Northern Ontario Railway and $2,000,000 to pay off a loan. So, on the whole, our capital expenditure, outside of these particular items, was very considerably reduced.

"Last year we received from the provincial war tax the sum of $2,050,128.39, and we expended $2,414,447.55, or $364,319.16 more than we received, and this additional sum has been charged up to ordinary expenditures."

United States Money Markets.

The United States money markets had been closed to Ontario since the Republic entered the war and the province had been able to "carry on" financially as a result of the income and the balance from other years, said Mr. McGarry. Ontario was undoubtedly "the soundest province, Dominion or nation engaged in the war." During the year the province borrowed five millions. Of this, two millions were borrowed at 5.006 per cent. without any commission and one million at 4.92 per cent. No other province or country had been able to borrow at such favorable rates. In addition, two millions had been borrowed at one of the banks at the end of the year at 6 per cent. An extremely acute situation developed when the United States was shut off to Ontario for borrowing. It was not a favorable time to put on a loan here. The finance minister at Ottawa sent for the Ontario treasurer some weeks ago and satisfactory arrangements were made for financing Ontario so long as the war continues for what is absolutely essential. Some bonds would be placed locally in a short time at a lower rate than it would be possible to secure from the finance minister.

Mr. McGarry furnished the following figures showing the estimated receipts and the estimated expenditure for the fiscal year ending October 31, 1918:—

Estimated Receipts.

Subsidy, $2,396,378.88; interest on common school funds held by the Dominion ($75,000), interest on investments ($150,000), $225,000; lands, forest and mines department, $2,875,000; public institutions, $300,000; education department, $65,000; provincial secretary's department, $210,350; motor vehicles licenses, $1,100,000; agriculture, $200,000; casual revenue, $400,000; insurance department, $73,000; the amusement tax act, $500,000; succession duties, $2,500,000; corporation tax act, $1,800,000; the Ontario temperance act, $150,000; law stamps, $125,000; game and fisheries, $615,000; earnings Timiskaming and Northern Ontario Railway, $250,000; Hydro-Electric Power Commission, interest, etc., $1,200,000; provincial war tax, $2,060,000; total estimated receipts, $17,044,728.88.

Civil government, $1,109,478.36; legislation, $326,018; administration of justice, $807,097.05; education, $2,571,479.23; public institutions maintenance, $2,143,486.70; agriculture, $1,017,468; colonization and immigration, $98,112; hospitals and charities, $611,015.11; maintenance and repairs of government buildings, $257,628.49; public buildings, $277,347.28; public works, $117,800; colonization roads, $87,000; highways department, $81,604; game and fisheries, $340,804.87; attorney-general's department, miscellaneous, $186,355.75; treasury department, miscellaneous, $75,519.79; provincial secretary's department, miscellaneous, $303,693.74; charges on Crown lands, $955,543.35; refund account, $105,573.74; miscellaneous expenditure, $97,508.36; total, $11,570,533.82.

Capital Expenditure.

Purchase of No. 17 Queen's Park, $20,000; hospital for insane, Kingston, additional land, $30,000; hospital for feeble-minded, Orillia, additional buildings (part re-vote), $63,500; hospital for insane, Woodstock, additional buildings, $40,000; hospital for insane, Hamilton, additional buildings, $50,000; hospital for insane, London, new wing, $20,000; hospital for the insane, Whitby, additional buildings, etc. (part re-vote), $110,000; hospital for insane, Mimico, additional buildings, $75,000; educational buildings, $66,500; agricultural buildings, $37,500; court houses, industrial farms, jails and registry offices, districts, $64,000; total, $12,147,033.82.

CANADIAN CAR COMPANY'S CONTRACT

The Canadian Car and Foundry Company has obtained a contract for the construction of twelve mine sweepers for the French government, all for delivery this year. They will be built at the Fort William plant. This is the contract which street gossip had credited to the United States government. So Mr. W. W. Butler, general manager, informs *The Monetary Times.*

SOVEREIGN LIFE ASSURANCE COMPANY

Another strong financial statement has been submitted by the directors of the Sovereign Life Assurance Company of Canada, which has made satisfactory progress during the past few years. This company is one of the eastern institutions which moved to the West some years ago, and, under the management of Dr. H. J. Meiklejohn, managing director, has grown into a substantial underwriting corporation. Dr. Meiklejohn has been properly cautious in his policy, receiving the active support of his colleagues on the board, headed by Mr. R. R. Scott as president. The company's officers have watched the expenditures, both large and small, very closely and have managed affairs with economy, at the same time not losing sight of the important factors of enterprise and progress. The result has been shown in the annual statements of the past few years.

During 1917 policies were issued and revived during the year amounting to $2,237,500, an increase over the amount written in the previous year of $544,000, and the largest amount written in any one year since the company's inception The total assurance in force at December 31st amounted to $7,626,684, which is an increase of $1,232,600 over the amount in force one year previously. The net cash income from premiums was $257,572, which is $40,493 in excess of 1916. The cash interest income amounted to $78,282, exceeding the corresponding income for 1916 by $5,137. The total cash income, $335,998, exceeded that of 1916 by $45,701, and represents an increase over that of the previous year of 15.7 per cent.

Expenditures under all heads were $168,040, compared with $162,829 in 1916. The total amount paid to policyholders during the year (including claims, surrenders, profits on policies, etc.), was $55,690, comparing with $69,712 paid the previous year. The difference is largely accounted for by a number of claims reported towards the close of the year, in respect of which settlement will fall in 1918. The total assets increased from $1,358,587 at the beginning of the year to $1,538,840 at the end of the year (the actual net increase being thus $180,253—by far the largest in the company's experience).

LIFE INSURANCE COMPANIES' INVESTMENTS IN OUR FOUR WAR LOANS

COMPILED BY THE MONETARY TIMES

LIFE INSURANCE COMPANY	First War Loan		Second War Loan		Third War Loan		Victory Loan		Remarks
	Subscription	Allotment	Subscription	Allotment	Subscription	Allotment	Subscription	Allotment	
	$	$	$	$	$	$	$	$	
Aetna	525,000	525,000	100,000	100,000	250,000	250,000	300,000	300,000	—
British Columbia	20,000	20,000	......	......	20,000	20,000	40,000	40,000	This company was absorbed by the Sun Life Co. of Canada in December, 1917. $40,000 subscription represents conversion of 1st and 3rd War Loan Bonds, difference paid in cash
Canada	1,500,000	1,500,000	1,000,000	407,500	4,000,000	2,890,000	8,407,500	6,282,500	$1,500,000 of the 3rd War Loan subscription represents conversion of the issue due 1925 into the 1937 maturity. Since the allotment of the last loan, the company has purchased an amount of bonds to bring its holding of the 1937 issue to an even $3,000,000. $3,000,000 of subscription to Victory Loan represents conversion of 3rd War Loan and $407,500 conversion of 2nd War Loan
Capital	25,000	25,000	20,000	20,000	100,000	90,000	140,000	140,000	—
Confederation	500,000	500,000	250,000	207,500	2,000,000	1,440,000	2,500,000	2,273,750	The holding of the 2nd loan and $1,090,000 of the 3rd loan were turned in on account of the Victory Loan subscription
Continental	100,000	100,000	100,000	47,500	200,000	155,000	500,000	500,000	$292,500 of 1st, 2nd and 3rd War Loans were turned in on account of Victory Loan subscription
Crown	100,000	100,000	150,000	67,500	200,000	156,500	79,000	79,000	On the subscription of the 1931 War Loan, the company made a further purchase of $12,000. The company turned in its old bonds, and its new subscription of $79,000 was extra
Dominion	115,000	115,000	115,000	69,500	200,000	155,000	500,000	500,000	The company converted its previous holdings of $290,000 into the new Victory Loan, paying the difference in cash
Excelsior	150,000	150,000	100,000	82,500	300,000	255,000	200,000	200,000	The company subscribed for $200,000 of the Victory Loan, and converted the amounts it held of the second and third war loans so that the total holdings in the Victory Loan are $587,500. The company disposed of $50,000 of the first loan and converted the balance into the 3rd loan, this amount being included in the $300,000 mentioned as subscribed. To the 2nd loan $100,000 was subscribed, $82,000 of which was allotted. The company later purchased $50,000 of the 2nd loan.
Great-West	1,000,000	1,000,000	1,000,000	407,500	1,500,000	940,000	4,500,000	3,829,000	The company surrendered the full amount of war bonds held under allotment of previous loans in part settlement of allotment under Victory War Loan
Gresham	30,000	30,000	25,000	25,000	20,000	20,000	25,000	25,000	In addition, the company bought further bonds of the 1925 loan amounting to $25,000, making its total holdings $100,000. These figures are of local application only, as the Society has a total holding of $4,250,000 in the British War Loans, and a further $940,000 in war loan stock issued by the Allies and the British Colonies
Imperial	350,000	350,000	750,000	307,500	1,500,000	1,132,500	2,465,000	2,340,000	—

LIFE INSURANCE COMPANIES' INVESTMENTS IN OUR FOUR WAR LOANS—*Continued from Page 18*

LIFE INSURANCE COMPANY	First War Loan		Second War Loan		Third War Loan		Victory Loan		Remarks
	Subscription	Allotment	Subscription	Allotment	Subscription	Allotment	Subscription	Allotment	
	$	$	$	$	$	$	$	$	
London & Lancashire	100,000	100,000	100,000	82,500	120,000	120,000	150,500	150,500	In addition to the original subscriptions there have been several exchanges and additional purchases made by the company, but no sales. The total holdings at date amount to $806,000, and are exclusive of the company's holdings at home in the British War Loans
London	250,000	250,000	300,000	127,500	500,000	425,000	1,300,000	1,300,000	The company subscribed for $1,300,000 of the Victory Loan, and converted all previous War Loan Bonds ($812,500) then held, now holding a total of $1,300,000.
Manufacturers	500,000	500,000	700,000	287,500	1,000,000	715,000	1,500,000	1,125,000	The company purchased later $335,000 of the 1st War Loan, turning in their total holding of $835,000 to the 2nd loan, thus gaining a holding of $1,122,500 of the 2nd loan. The company also purchased in the open market $285,000 of the 3rd loan, making a holding of $1,000,000 of that loan. At the time the Victory Loan was issued, $2,131,700 of old war loans were held. This sum was all turned into Victory Loan, making, with the new money subscribed, a total holding of $3,256,000 of Victory Bonds.
Metropolitan, New York	3,000,000	2,000,000	3,000,000	2,725,000	3,000,000	3,000,000	5,000,000	5,000,000	Victory Loan allotment includes subsequent purchases
Monarch	40,000	35,000	50,000	43,000	100,000	94,600	125,000	125,000	—
Mutual, of Canada	500,000	500,000	1,500,000	537,500	2,500,000	1,843,700	5,400,000	4,265,600	The company made a subsequent purchase of $325,000 of the 1st War Loan. Ultimately, all earlier holdings were converted into Victory Loan
National	150,000	100,000	150,000	67,500	175,000	137,500	345,000	345,000	$220,000 of former loans was converted, the total holding of the company being $345,000
New York	1,000,000	1,000,000	......	......	1,000,000	715,000	2,000,000	1,875,000	The company purchased $1,000,000 1st War Loan Bonds, due 1925, which were later used in part payment for subscription to Victory Loan. It also purchased $285,000 additional 3rd War Loan Bonds, making holding of $1,000,000.
North American	500,000	500,000	500,000	207,500	1,000,000	715,000	1,000,000	1,000,000	$500,000 of 3rd War Loan converted
Northern	105,000	105,000	50,000	32,500	210,000	165,000	235,000	235,000	The company has made a number of exchanges but no sales, and the total holding of paid-for war bonds was, at December, 1917, $230,000. This total is large for the company, and is partly attributable to the fact that the amount of deduction for policy loans made which is allowed by Life Insurance Investment Act, was very small, owing to special efforts made
Prudential, Newark	500,000	500,000	700,000	287,500	500,000	365,000	2,200,000	2,200,000	Subsequent purchases increased holdings of the first three loans to a total of $2,200,000, all of which was converted into Victory Loan Bonds
Saskatchewan	......	......	......	......	10,000	......	20,300	20,300	The company subscribed for $20,300 of the Victory Loan, converting $300, 1925; $5,000, 1931; and $5,000, 1937 loans. This leaves the company with $10,000 of the third loan, or a total subscription to the various loans of $30,300.
Security	......	......	......	......	10,000	......	12,000	12,000	The company converted 3rd War Loan of $10,000 into Victory Loan
Sovereign	60,000	60,000	60,000	35,500	60,000	53,000	100,000	100,000	The company converted prior holdings into Victory Bonds, with a further small subscription to bring to even figures. Total of Canadian War Loans now held is $250,000, represented by 1937 maturity

Put the Burden on Those Trained to Carry It.

One business man should not be asked by another to give the time required to perform the duties of Executor when a capable and experienced Corporation makes that work a regular business and performs the service at no greater cost. The remuneration for the services of this Corporation is fixed by the Court in the same manner in which the fees of an individual Executor are determined.

We will gladly explain the many advantages to be gained by the appointment of this Corporation as Executor. Wills in which we are appointed Executor may be filed in our Safety Vaults free of charge.

THAT many people of business judgment and financial standing have appointed this institution their executor, is an evidence of the satisfactory quality of the service the Company renders in managing property.

We are glad to be consulted about the problems such management involves.

National Trust Company Limited

Capital Paid-up, $1,500,000 Reserve, $1,500,000

18-22 King Street East, Toronto

Going Overseas?

To those going overseas, whether in a military or civil capacity, to do their bit, or to those who contemplate spending the Winter away from home, and who may need a strong, reliable corporation to look after their affairs in their absence, we offer the suggestion that they leave a Power of Attorney in our favor. It will relieve them of all the details and worries incidental to looking after their Estates. Compared with the relief afforded and the service rendered, the charge would be small and the satisfaction great. Interviews invited; correspondence solicited. All business treated as strictly confidential.

WAR TRADE BOARD CREATED

Representative Men Have Been Named by Dominion Government

The Dominion government has decided to create a War Trade Board. The members are: Sir George Foster, minister of trade and commerce; Messrs. Frank P. Jones, Montreal; John W. McConnell, Montreal; James H. Gundy, Toronto; Charles B. McNaught, Toronto; Joseph Gibbons, Toronto. Mr. C. A. Magrath as fuel controller, and the Hon. H. Laporte as chairman of the war purchasing commission, are to be members of the board ex-officio. The minister of trade and commerce is appointed chairman. The members of the board will elect a vice-chairman.

The executives of the labor organizations were asked to nominate a representative of labor. Mr. Gibbons, whose name was among those submitted, will represent organized labor on the board.

The powers and duties of the board are officially announced as follows:—

Powers and Duties of Board.

(1) To have direction of licenses for export and to make recommendations with regard thereto.

(2) To have direction of licenses for import and of applications to the proper authorities of exporting countries for permit to export to Canada, and to make recommendations with regard thereto.

(3) To undertake and carry out such supervision as may be necessary of all industrial and commercial enterprises, and by co-operation with producers to prevent waste of labor, of raw materials and of products.

(4) To make recommendations for the maintenance of the more essential industries as distinguished from those of a less essential character.

(5) To investigate and keep records of the country's stock of raw materials, partly finished products and finished products, and when necessary to direct their distribution so as to obtain the best results in the national interest.

(6) To consider and recommend methods of curtailing or prohibiting the use of fuel or electrical energy in the less essential industries.

(7) To direct priority in the distribution of fuel, electrical energy, raw materials and partly finished products.

(8) To investigate generally conditions of trade, industry and production (except food production) and to make recommendations with regard thereto.

(9) To work in co-operation with the Canadian War Mission at Washington, and, through that mission or otherwise, to co-operate with the War Trade Board of the United States, or other bodies constituted for the like purpose, with a view to securing the most effective unity of action by the two countries for war purposes.

Co-operation of Departments.

It is provided that any department of the government may attach to the board such of its officers as may be deemed advisable.

The board is to co-operate with the several departments of the government in any matter requiring common or united action, and each department is to assist and co-operate with the board and its officers.

The order-in-council creating the board also contains a proviso that nothing therein shall take away or affect the powers of the food controller. It contains a further proviso that for the present the powers of Mr. Magrath as fuel controller and of Sir Henry Drayton as controller of electrical energy shall continue pending further arrangements as to united control and direction in both fuel and power.

An official statement issued by the prime minister declares that the board is constituted, "following very careful consideration of more effective organization for the purpose of the war, and having regard to the necessity of more effective measures for maintenance of industries essential for that purpose."

The Ontario fire marshal has ordered an enquiry into the fire which destroyed the plant of the Office Bureau in Aurora, Ont., on the same day that an application was made at Osgoode Hall, Toronto, to wind up the concern. One of the largest creditors, who lives in Toronto, has demanded a complete investigation into all the circumstances. The night the fire took place many of the town hydrants were frozen, severely handicapping the work of the fire-fighters.

The Hamilton Provident and Loan Society

Notice is hereby given that the Forty-sixth General Annual Meeting of the Shareholders of this Society will be held at the Society's Office, in Hamilton, on Monday, Fourth day of March next, at twelve o'clock noon, for the purpose of electing Directors to serve for the ensuing year, and for all other general purposes relating to the management of the Society.

A full statement of the Society's affairs for the year ending December 31st, 1917, will also be submitted to the Meeting.

D. M. CAMERON, Treasurer.

"INVESTMENTS"

A MUCH MISUSED TERM

Many who should be, and think they are laying up money for their old age, are misled into so-called "investments," where their hard-earned money is jeopardized, and frequently lost, though it is of the utmost importance to them and to those who may be dependent upon them that its absolute safety should be beyond peradventure.

To those who should invest safely and with caution, not speculate, the bonds of the Canada Permanent Mortgage Corporation can be confidently recommended. This Corporation is most conservative in the investment of the funds entrusted to it. For more than sixty years it has held a leading position among Canada's financial institutions, and its bonds are a LEGAL INVESTMENT FOR TRUST FUNDS. They are issued for one hundred dollars and upwards. Write for full particulars.

AGRICULTURE IS THE BACKBONE

Canadian Farmer Becoming One of Most Up-to-date and Prosperous Agriculturalists, Says Mr. E. R. Wood

That investors of the United Kingdom had placed through our loaning institutions many millions of pounds sterling in farm mortgages throughout Canada, was one of the many interesting statements of Mr. E. R. Wood in presenting the report of Central Canada Loan and Savings Company at the recent annual meeting. Mr. Wood recalled that not only have the people of Britain loaned their funds in generous amounts to the Canadian farmer through these channels, but they have also purchased the bulk of Canada's farm products. Britain has largely financed the Canadian farmer, and at the same time has been his best customer. We shipped to Britain, for example, during he fiscal year ended March, 1917, $230,000,000 of our grain exports out of a total valued at $289,000,000. The United Kingdom bought in the same year $90,000,000 of the $128,000,000 of animal produce which we exported.

"During the three years of war, our farm products have been exported in increasing volume and at rising prices," continued Mr. Wood. "In 1915 we shipped over $209,000,000 worth of Canadian agricultural and animal products abroad; in 1916 $352,000,000; and in 1917 $501,000,000. Most of this went to the United Kingdom.

Agricultural Exports Lead.

"Despite the great impetus given to Canadian manufacturing by the munitions industries, the exports of Canadian animal produce and agricultural products continue to exceed those of factory products. For many years the exports of our farm products have exceeded those of our manufactures. The exports of Canadian agricultural products, including animal produce, for the fiscal year 1914, totalled $251,000,000 and for 1917 $501,000,000. The exports of Canadian manufactures in the same years were valued at $57,000,000 and $477,000,000 respectively.

"Agricultural conditions throughout the Dominion are unusually satisfactory. The farmers, generally speaking, are in excellent financial shape. They were, in the aggregate, substantial contributors to Canada's Victory Loan in November last. They have taken advantage of prevailing conditions to pay their obligations, to increase their savings and to invest their surplus funds in the government's war securities. The Federal and provincial governments have active departments of agriculture, which are furthering the interests of the industry in a way that will make the Canadian farmer one of the most up-to-date and prosperous agriculturalists of the world.

Future of Interest Rates.

"The future of interest rates is a subject on which opinions are sharply divided. The duration of the war is obviously an important factor. As this is unknown, the question is problematical. Canadian government borrowing for war purposes was the outstanding feature last year, and our war loans will certainly have the right of way during 1918. Provinces, municipalities and corporations, however, will require to make issues, and the extent of these and the rates it will be necessary to pay will determine the rate to be paid on mortgages. No doubt, this will be somewhat higher than last year.

"The past year has been, financially, a somewhat remarkable one in Canada. One of the outstanding features was the growing investment power of the country; an important consideration in view of the necessities of war financing. The Canadian bond sales in 1917 totalled $756,000,000, making a new high record. Dominion government loans—and chiefly war issues—accounted for $675,000,000 of the total. Of the total loans of $756,000,000 Canadian investors purchased no less than 75 per cent. as compared with only 33 per cent. in 1916; which, up to that time was the highest percentage share ever taken by this country's investors.

"The Canadian people realize that, in view of war finance requirements in the United Kingdom and the United States, they must finance, for the time being, at least, the development of their natural resources, the nation's daily business, and their share of the war. In addition, they must be prepared to advance substantial credits to the United Kingdom for her large purchases in this country. The task is heavy for a young country, which until very recently was one of the foremost borrowing nations in the money markets.

"The achievement of Canada in connection with the Victory Loan in November, however, is an indication of what the Dominion is able to do with proper organization. As is generally known, while the finance minister asked for $150,000,000, the national organization responsible for the sale of the bonds in co-operation with the minister, made the objective $300,000,000. That amount was surpassed by $118,000,000, making a total subscription of $418,000,000. The fact that there were over 800,000 subscribers to the loan, as compared with only 40,000 to the previous war loan, is very gratifying. One in every 9.76 of the population is a holder of Victory bonds; thus having a direct stake in the country's welfare and in its share of war financing. Our Victory Loan record compares well with, and in most cases surpasses, the war finance achievement of other countries. The second Liberty Loan of the United States, for example, was subscribed to by one in every 10.74 of the population, compared with our record of one in every 9.76. The Liberty Loan subscriptions included many substantial amounts from the banks. The Canadian banks were not asked to subscribe to the Victory Loan, they having other important government financing in hand. The Victory Loan was entirely subscribed by the people and by financial, industrial and other corporations.

Down to War Basis.

"In 1917 our Federal and provincial government borrowings accounted for over 90 per cent. of our bond issues. Our municipal, railroad, corporation and other loans were responsible for less than 10 per cent. This illustrates the sharp curtailment effected in all other than war expenditures. Financially, Canada is down to a war basis. Our municipal bond issues, for example, last year were $25,000,000, compared with over $50,000,000 in 1916. In order to still further conserve our financial resources for war purposes, an order-in-council was passed in December last, making it necessary for the finance minister's authority to be obtained for the issue of new securities.

"For the past three years Canada has participated in what we may term the prosperity of war. This has been due to the receipt of war orders from the United Kingdom, the United States and elsewhere. High prices have been realized for all we have produced on farm and in factory. Estimates, based on the official figures available, indicate that up to the end of 1917 the Dominion had received $1,810,000,000 of war orders. Of that sum $1,000,000,000 represents orders placed here by the Imperial Munitions Board on behalf of tbe British government.

"War orders have been instrumental in building up a record export trade. For the fiscal year ended March 31st, 1917, our total exports were $1,179,211,100; which, together with our imports of $845,356,306, gave us a total trade of $2.024,517,400. The balance in our favor was $354.000,000. For the 12 months ended September last our favorable balance was $415,000,000, and for the 12 months' period ending March next it will probably be $500,000,000. At the end of the fiscal year, 1912, we had an unfavorable balance of $214,000,000. Our reversal from a debtor to a creditor nation in this way, in such a comparatively short period, is a matter for considerable gratification. It is a good omen for our future financing, particularly in regard to the war.

Debt and Production.

"The debt continues to increase substantially on account of the war, but with thrift, greater production and the development of our vast natural resources, no one doubts our ability to pay the annual interest charges, and, in addition, to provide a part of the war principal. It is good to know that an increasingly large share of the interest payments on our debt is being made to the Canadian people, who, consequently, are not only taxpayers but bondholders also. The payment of interest in this country, rather than its export abroad, is very desirable.

"For the first time in our history the value of our crops last year exceeded a billion dollars. They contributed $1,089,000,000 to the value of our primary production, as compared with $825,000,000 in 1915. From the field crops, forests, mines and fisheries of Canada in 1917, we obtained new wealth of $1,507,000,000, as against $975,000,000 in 1914. The value of our production in those four items alone last year exceeded the total of the national debt by over $500,000,000. With the requisite capital and labor after the war, drawn from our own country, from the United Kingdom and from our other Allies, there is before Canada an era of growth which, when in progress, will surprise not only ourselves but other countries which have sent new citizens and capital for Canadian expansion. The value of our primary production, after a few years of development of our great resources, will materially exceed even the remarkable record which the Dominion made last year."

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions Dividends and Future Plans

Canada Copper Corporation, Limited.—The company is making rapid progress in its preparation to extract ore at a minimum cost, according to New York dispatches. A main transportation tunnel, to be 2,900 feet long, was started in September and is now two-thirds completed. Recent rate of progress exceeds 600 feet a month. On finishing the tunnel the company will immediately drive a large raise to connect with the upper tunnel and works, where preparations have been practically completed for mining the overlying ore body. The power line, which transmits a current generated at Bonnington Falls, 100 miles distant, is ready for operation, and the Canadian Pacific Railway has completed the preliminary work on the branch line to connect the mines with Princeton, B.C., where the mill is located. These facilities will effect the highest degree of operating economy.

Penman's, Limited.—Shareholders are looking forward with considerable interest to the forthcoming financial statement for 1917, as it is expected that the showing will equal, if not exceed, the record showing of the preceding year, according to Montreal advices. Incidentally, the question of an increased dividend rate is giving the shareholders cause for considerable thought, in view of the large earnings. In 1916 the profits amounted to 31 per cent., and it might be added that since 1910 only twice have they gone under 10 per cent., and very slightly at that, while in 1915 they ran as high as 27 per cent. The dividend record shows that since 1907 up to 1916, the dividend rate was 4 per cent., while a bonus of 1 per cent. was added in 1916, which has since prevailed, making the current distribution 5 per cent. The shareholders think they might reasonably expect 7 per cent. under the circumstances.

City Dairy Company.—The financial statement for the year ended December 31, 1917, shows profits considerably in excess of those for the preceding 12 months, with the 1917 profits at $70,274, as compared with $18,018 in 1916. Profits in 1915 were $101,647, but fell off substantially in the following year, by reason of increased costs of products, materials and supplies.

The past year the company, under new management, notwithstanding the heavy increases in operating expenses, has increased the volume of business transacted, resulting in a corresponding substantial gain in the year's profits. Important operating economies introduced during 1917 have effected beneficial results, and the taking over by the City Dairy organization at the end of December last of the entire distribution of milk and dairy products formerly made by S. Price and Sons, Limited, as pointed out by President C. B. McNaught, will show during the current year significant operating economies.

Ottawa Traction Company.—In the fourth annual report for the year ended December 31, 1917, both gross and net earnings were in excess of the previous 12 months, with the increase in net amounting to slightly more than 10 per cent., with the respective totals at $535,289 and $484,564 for the last two years, a balance of $50,724 in favor of the 12 months just closed. The company's gross figures for 1917 were given as $1,240,627, comparing with $1,154,918 for 1916. Operating expenses for the two periods amounted to $705,338 and $670,348, respectively, showing an increase closely proportionate to the increase in net earnings. During the 12 months 29,347,692 passengers were carried, as compared with 27,033,778 in the preceding year. The rolling stock was augmented to the extent of three pay-as-you-enter cars and the roadbed was improved at a cost of $50,000. Four quarterly dividends of 1 per cent. each and a bonus of 1 per cent. were paid. Interest on bonds accounted for $44,079. Mileage payments totalled $16,442, taxes $24,484 and business war tax $40,615. The company laid aside $110,000 for depreciation and $18,085 was transferred to the profit and loss account. Assets amounting to $3,432,959 were shown in the balance sheet, comparing with $3,395,342 at the end of 1916.

Belding Paul-Corticelli, Limited.—The net profits of the company amounted to $142,754 in the year ended November 30th last, against $135,984, the previous high record established in 1916, and only $18,123 in 1915. Profits were equal to 16.5 per cent. on the preferred stock issue and to 10.9 per cent. on the common. Payments of two years' back dividends on the preferred, taking $120,457, were, therefore, made possible without impairment of the improved position into which the company had worked the previous year. The return of $35,000 from a mortgage investment which matured during the year added that much to the cash assets of the company and practically accounted for the difference in working capital shown in the balance sheet. At the end of 1916 working capital was $701,918, and at the end of 1917 it was $736,663. Three years ago it was $500,676. Changes in the character of current assets and current liabilities were favorable in each case. Cash and receivables accounted for gains in the former, inventories being slightly lower, while bank loans were reduced $20,000 to $175,000, against $452,000 three years ago. In the same three years there has been a reduction in funded debt through sinking fund account of about $70,000. After paying two years' dividend arrears and reserving $5,000 for accidents, $17,296 was added to profit and loss, which stands at $240,475.

BOND DEALERS' ASSOCIATION

Mr. E. R. Wood was elected hon. president of the Bond Dealers' Association of Canada at the annual meeting which was held in Toronto, on February 12, following a meeting of the executive on the previous day. There are 69 firms identified with the organization and owing to its widespread nature, it was decided to divide it into three sections, embracing Quebec and the Maritime Provinces, with the exception of Prince Edward Island, in the east, Ontario in the centre, and Manitoba, Saskatchewan, Alberta and British Columbia in the west. It was from the Bond Dealers' Association that the Dominion executive of the Victory Loan was formed, and the amazing showing made at that time was a tribute to the organizing ability of the Canadian bond dealers. A permanent paid secretary will shortly be appointed, but in the meantime the secretarial duties will be carried on by Mr. C. H. Burgess, who has been acting secretary for the past year.

J. M. MACKIE, MONTREAL,
Elected President of the Bond Dealers' Association of Canada.

The officers elected for the current year are as follow: Hon. president, Mr. E. R. Wood; president, Mr. J. M. Mackie, Montreal; vice-presidents, Mr. J. H. Gundy (Toronto), Sir Augustus Nanton (Winnipeg), and Mr. Edwin Hanson (Montreal); treasurer, Mr. A. H. B. Mackenzie, Montreal. The executive is composed of 18 members: Messrs. J. M. Mackie, Edwin Hanson, R. P. Leclerc, A. G. Nesbitt and R. A. Stevenson, in the east; J. H. Gundy, J. W. Mitchell, A. E. Ames, W. C. Brent, R. C. Matthews and W. L. McKinnon, in Ontario; and Sir Augustus Nanton, Hon. Edward Brown, A. L. Crossen, Manitoba; G. H. Sneath, Saskatchewan; and F. B. Pemberton, British Columbia. Alberta's representative has not yet been chosen.

THE pioneer American fire insurance company to recognise and provide for the needs of both large and small insurers everywhere, by establishing numerous, well selected and widely distributed local agencies, and by conservatively and steadily enlarging its underwriting capacity to meet the needs of all.

"The Largest Fire Insurance Company on the Continent."

WAR-TIME BUSINESS AND PROFITS—BOTH ARE VITAL

Vicious Tendencies Toward Business Life—Need of Fair Play—Farmers, Manufacturers and Other Producers and Their Products—Danger of Strangling Industry and Drying Up the Sources of Our Wealth—Taxation and Expansion—Unworthy Socialism

Being the Text of An Address Delivered Before the Canadian Club of Orillia by S. R. Parsons, President of the Canadian Manufacturers' Association, and Published Under the Sanction of the Executive Committee of the Association, as Being of Interest to All Canadians at This Time

"Canadians, let us know each other better—let us understand and sympathize with each other's problems—for in that knowledge lies increased production, good feeling between city and country, prosperity in reason and fair play for all," was the burden of a thoughtful and far-reaching address by Mr. S. R. Parsons, President Canadian Manufacturers' Association, speaking, February 8, before a very large meeting of the Canadian Club of Orillia.

Continuing, Mr. Parsons said:—

"It should surely be possible to discuss dispassionately, and with fairness to all interests, some present tendencies in our public mind toward the business life of the country. If ever we needed calm deliberation and clearness of vision it is at the present critical time. We are all more or less on edge owing to war conditions, and in our anxiety that each individual or interest should play a worthy part we too easily, and oftentimes with lack of knowledge through inexperience, strike at the other fellow or group. People are unsettled and out of sorts. The farmer denounces the Government, the railways, the manufacturer and the storekeeper. The professional man, be he minister, doctor, lawyer, or what not, curses everybody within reach because war prices prevail, and seems to think all others are profiteers and sharks, holding him up at every turn. The manufacturer and merchant rail at conditions of labor, soaring pay rolls, shortage and tremendously increased costs of raw materials, Government and railway embargoes, increasing taxes, and threatened extinction of reasonable profits. The workers, notwithstanding heretofore unheard of wages, are aggravated at the figures they have to pay for all supplies, and therefore grumble at all and sundry.

"Tennyson tells us:

> " 'In wars of freedom and defence
> the glory and grief of battle won or lost
> Solders a race together.'

If so, the surface signs of unity of thought and purpose of working are certainly lacking in Canada.

City and Country in Same Boat.

"One curious phase of our disturbed mental condition is that it leads some people to believe that the good, fair-minded, honest folk for the most part live in the country and all the opposite kind are to be found in the towns and cities and engaged in business life. This tendency was well illustrated recently in two editorials appearing in the same number of a religious weekly, published in Toronto. The one was headed 'Prosperous Farming,' and detailed with evident approval and satisfaction the case of a farmer in Saskatchewan, who last spring bought a section of land for which he agreed to pay over twenty-one thousand dollars, and upon which he made but a trifling payment. At the end of the year, the article stated, he had about twenty-five thousand dollars in returns for the wheat grown, or—to quote from the editorial—'more than enough to pay for the whole farm.'

"The other editorial, referring quite evidently to war-time commercial life and conditions, denounced the making of money in war time and condemned in unmeasured terms those who are heaping up profit at such a time as this. Now, to an average business man it would appear that a little consideration should show that the farmer referred to made his enormous and extraordinary profit on account of war prices on wheat; in other words, if there is such a thing as a 'war profiteer,' surely this man was one, for profits anything like his upon the actual capital invested were never heard of in the making of munitions, the curing of bacon, or any other line; yet the farmer is commended and the manufacturer or trader condemned. Why? Is it any worse to make profits out of manufactured goods, or by other means, than out of wheat? Of course the case of this particular farmer was, no doubt, somewhat exceptional and perhaps seldom duplicated but this surely is also equally true of a manufacturer or trader who makes abnormal profits.

The Farmer and His Buggy.

"Another case in point along the line of the farmer more than holding his own as compared with the manufacturer is well illustrated by a recent occurrence. A certain farmer desired to purchase a buggy, and having used one that was in every way satisfactory, he went to the manufacturer and asked if another one could be supplied of the same kind. The manufacturer replied affirmatively, and the farmer asked the price, which was stated to be one hundred and eighty dollars. At this he held up his hands in holy horror and stated that his father had paid only eighty dollars for the buggy he was now using, and that he certainly would not pay any such outrageous figure for a new one. The manufacturer then looked up his records and stated to the farmer that it was quite true that his father had purchased the buggy at a price of eighty dollars. 'But,' said he, 'I find the record states that your father paid for this not in cash, but by giving me one hundred bushels of wheat. Now,' said the manufacturer, 'I will give you this new buggy for one hundred bushels of wheat, and in addition I will buy your wife a new dress and you a new suit of clothes.' This the farmer would not agree to, and the manufacturer's efforts to convince him that the price was fair, under present conditions, were unavailing.

Need be no Antagonisms.

"Now, there should be no antagonism whatever between the farmer and the manufacturer or trader. They are all necessary to the country's well-being and prosperity, despite the erroneous impression of some people to the contrary, and it would be better if they exercised more confidence in and good-will towards each other. It should be a matter for congratulation if the farmers, manufacturers, mine owners and all other producers are prosperous. It is a belief held very widely by men of lengthened and varied experience that the average farmer in Canada, over a series of years, makes as large a return upon his invested capital as does the average trader or manufacturer. One thing is certain, and that is that seldom does a farmer fail to make a living at all events. This cannot be said of many manufacturing and trading ventures, as farmers and other investors know to their sorrow. In this connection it is interesting to note the profits of the Grain Growers' Grain Company of Manitoba, and associated companies, from the Presidency of which Hon. Mr. Crerar, the capable and well-regarded Union Government Minister of Agriculture, has been drafted to serve his country at Ottawa. The total profits of the three concerns (which, according to newspaper reports, have recently amalgamated) handling grain, running elevators and stores, buying and selling live stock, coal, binder twine and other supplies, etc., for the year 1915-16 were over $1,800,000 on a capital, it is stated, of $2,000,000, which is equal to a 90 per cent. return. No doubt the profits of the new amalgamated company for the present year will be equally good, if not very much better. The huge profits made, fortunately go into a great many hands, as the shareholders are numerous and are associated to some extent on a co-operative basis. This feature of the wide distribution of profits among numerous shareholders also characterizes many of our large industrials.

Productive Power Is Vital.

"It should never be forgotten for a moment that we could not exist as a nation if it were not for what we produce—what we grow, take out of the earth, make in various ways and sell at a profit. A few figures will indicate the chief sources of our wealth. For the year 1916 the estimated values of our main products were as undernoted:—

Manufactured products	$1,621,000,000
Field crops	886,000,000
Animal products	303,000,000
Forest products	173,000,000
Minerals (unsmelted)	138,000,000

"The producer of minerals at Cobalt and elsewhere received the highest price on record for his silver on account of war conditions, and yet there was no outcry about inordinate profits. This is true of producers in other fields as well, outside of manufactured products. In a recent despatch from Ottawa it is stated that the total catch of sea fish in Canada for the month of November realized a value of about double as compared with the same month one year ago, largely on account of higher prices being paid to the fishermen.

"It is quite clear that this war is a contest of productive power—the power of the armies in the field backed by the power of men in fields, factories and elsewhere.

"He certainly is very short-sighted who sees only the incomparable sacrifices our brave boys are making at the front, but overlooks the essential aid that producers and others at home are rendering in the great war. A graduate of Toronto University, a well-known editor, now an officer on active service in France, wrote the speaker recently and magnanimously said: 'I often think that you in Canada, who are struggling to keep the country going, have a harder task than ours.'

Criticism of Manufacturers.

"Now, in connection with the production of the lines enumerated there seems to be little criticism on the part of the public against prices obtained and profits made except in the matter of manufactured goods. It ought, however, to be remembered that in addition to the question of ethics involved in this criticism Canada would have been in a deplorable condition, financially and commercially, without her great manufacturing industries during the war—aside altogether from the magnificent contribution to the war needs of the Allies. Nor should it be overlooked that in 1914-15 there were heavy losses in manufacturing, yet, notwithstanding this, employers were in most cases holding on to their men and obligating themselves in connection with those who recruited, besides contributing largely to all patriotic funds. Of course it is quite easy to understand that the farmers of the Northwest or elsewhere can hardly object to a price being fixed for wheat that enables them to make such large profits—profits on a scale that they would take strong exception to if made in ordinary manufacturing. It should also be borne in mind that these high prices for farm products are sure to apply for some years—war or no war. The present prosperity of many manufacturers, though, will largely come to an end when war ceases.

Curbing Manufacturers' Profits.

"Is it not possible, though, that the Government, in yielding to the popular cry for a curbing of the profits of manufacturing in one particular line, has been unfair and unwise in singling out any industry for its control In limiting the profits of an industry to a maximum of eleven per cent. the question is, too, if it will not have the opposite effect to that desired.? In the first place, such limitation is likely to do away with that initiative and ambition so necessary to the success of all undertakings. In the next place, as interest on investments, in general, bears from six to seven per cent., it would appear that a company having money in such an undertaking could only receive at the maximum four or five per cent. over and above what they could make in simply investing their means here and there within the channels of safety. Aside from the special risks involved in manufacturing, it is well known to all business men that four or five per cent. will not enable any rapidly expanding manufacturing company to properly extend its operations, provide for additional plant, larger stocks and higher values of raw and finished products, increased accounts receivable, and more working capital, all of which is essential. In this respect it is quite different from a financial institution that has its resources in a liquid form and whose working capital is largely supplied by a confiding public.

"A manufacturer, generally speaking, has very little, if any, cash, but has his assets spread over real estate, buildings, plant, book debts, materials finished and unfinished, etc., etc. Further, manufacturers in this country have no surplus of capital and, therefore, depend upon the banks for a line of credit to enable them to conduct their business through the busy seasons. Now, it is quite conceivable, in fact, altogether likely, that a company, limited as indicated, might go to a bank and ask for a line of credit, say a million or several million dollars, according to the capital turnover, etc., to be used at a certain season or seasons of the year. A banker, naturally, would ascertain whether the company would be able, out of its sales and earnings, to pay back the money borrowed in addition to providing for necessary expansion. If there was not a fair prospect of doing this, owing to Government or other limitations, the money would not be loaned and the business would thus be crippled or might even be ruined.

Big Profits, But No Cash.

"Taking a hypothetical case, it is, therefore, probable that the 'sixty-nine per cent.' spoken of recently, which the Government think they will get back at the end of the year from a company said to be making eighty per cent. profits, could at best only be largely, if not wholly, in assets of one kind and another other than cash, and the Government would, in consequence, have to take stock in the company instead of getting cash out of it, or in the event of the latter would compel the company to liquidate. If winding up were not advisable or possible the Government might very properly be called upon to assume its share of the liabilities which a growing and rapidly developing business forces upon the enterprise.

"This is no fancy picture, as any experienced manufacturer or banker will declare; in fact, confirmation is contained in a despatch from New York to The Toronto Globe of November 29th, telling of prosperous industrials being short of working capital to meet current bills, owing to present conditions, and omitting well-earned dividends, as well as trying to devise plans to borrow money to meet excess profits taxes. A very important consideration also is that conditions such as outlined above would, in turn, deprive farmers and other initial producers of a favorable market, such as they now have, for their products. It is officially admitted that limiting profits will make little, if any, reduction in prices. What is, perhaps, at present the most serious phase of this particular Government limitation is the fact that it is sure to limit the total output of packing house products at the very time when the world is crying out for them.

Tax Abnormal Profits.

"It is a crucial question, therefore, to face as to what should be done on the one hand to maintain to the fullest extent all our producing interests, and on the other hand, especially in the times through which we are passing, to have these interests contribute properly to the enormous expenditure which the country is called upon to make. If industries, such as farming, manufacturing, mining, cattle raising, trading, financial institutions, insurance companies, etc., etc., are worth anything to the country at all, they should be strengthened and maintained to the fullest possible extent. **The Government, however, should tax extraordinary profits, wherever made, in a manner that, while providing needed revenues for the country, would neither destroy the incentive to effort nor deprive the business of those surplus profits with which alone legitimate and necessary expansion can be taken care of.**

"Of course, a huge and extraordinary turnover, even at a very reasonable and quite proper margin of profit, will in any year yield a specially large return upon the capital; on the other hand, a normal turnover at the same margin might show a small return or even a loss. It is often impossible to forecast the result. No manufacturer, farmer or other producer, trader or speculator ought, however, to object to the Government taxing abnormal profits. There must, though, be a fair appreciation of the value of all industry and the fullest encouragement given to same. Further measures of taxation approaching confiscation—which are being advocated in some quarters, but mostly by irresponsible and immature writers and talkers—whether applied to manufacturing, agricultural, or other essential producing industries, will speedily destroy all enterprise and initiative and bring about chaotic conditions. It should never be overlooked that individuals or groups of men, whether engaged in manufacturing, farming, mining, trading, or any other line, cannot make profits for themselves without at the same time benefiting the country at large. The Finance Minister understands this perhaps better than anyone else.

"The question of moral obligation in connection with the proper use of holdings is not germane to this discussion, but in this regard manufacturers and other classes, in large numbers, have played a worthy part.

Expansion is Essential.

"If ever there was a time when all kinds of industry should be reasonably stimulated and put in a shape to bring national prosperity it is the present. This point of view is clearly set forth by Mr. C. W. Barron, publisher of the Philadelphia and Boston News Bureaus, and one of our foremost economists. It will be remembered that Mr. Barron was in Toronto during the first year of the war and delivered one of the sanest and most helpful addresses on war conditions and outlook that has ever been heard. On October 30th last, Mr. Barron, in referring to the enormous obligations the United States was undertaking in connection with the war, said, in part, in a carefully prepared statement:

" 'All this borrowing to carry Uncle Sam's financial burden in the form of Liberty Loans is dangerous, unless assets in transportation and other public utilities and all investment fields are conserved and built up. In other words, earnings must be expanded and values must be built up in this country behind Uncle Sam and his Liberty Bonds. If it is decreed that this is inflation, the answer must be that contraction spells disaster, and we have contracted values in this country, especially in the transportation field, by many billions, and they should be promptly restored as the foundation of war loans and the prosperity necessary for a successful war. **You do not win wars with shrinking assets, but you do win them with expanding values—expanding values in all fields where live and work the heart and hand and brain of man.**

" 'Let it not be forgotten that the two and one-half billions paid in taxes next year from this year's profits will be deducted from next year's earnings, and unless there are expanded profits and expanded values, our war finance will be on a dangerously contracting base.

" 'The sooner a few wholesome truths are understood, both locally and nationally, the safer will be the cause of liberty throughout the world, for the United States and her credit resources, as well as her men and munitions, are today the reserve power for Liberty.

" 'Economists figure that to properly sustain the continuous burden of war our savings must be put up from six billions per annum to at least twelve billions per annum.

" 'If we put Judge Gary's one hundred billions into the war we must prepare to raise the interest to pay the cost of the war loan.

Germany is Bankrupt To-day.

" 'Germany is bankrupt to-day because she promised to make Paris and London pay her war bills, and she is meeting the interest on her war loans, not from taxes or income, but from new borrowings. She is fighting the whole world for a gambler's stake of make or break.'

"The reference to Judge Gary's one hundred billions is a remark which the Judge made at the Japanese Commissioner's reception, stating that the United States could put one hundred billions into the war for human freedom. If the above arguments are sound as applying to the United States, they surely apply with life force to Canada. **It would not be at all difficult to dry up the sources of our wealth.**

"Since Mr. Barron's article was published it has been announced that the United States Government has taken over the control of all the Railways in that country, thus securing to some extent the financial results aimed at in that portion of his statement concerning the Transportation Companies. From the purely monetary standpoint, if large savings can be effected through co-ordination and co-operation (a probable result) the country will benefit; if not, higher rates will have to be put into effect or the National Treasury be called upon to make up any loss.

Fair Play for Every Class.

"It must be admitted that there are certain classes in our country who are neither farmers, manufacturers, miners or other producers, traders, workers in munition or other factories, etc., to whom profits, high salaries, or increased wages do not apply. In some cases these classes are not getting their fair share of the fruits of prosperous years, which, unfortunately, are likely to be soon followed by leaner ones. It should, therefore, be the endeavor of all right thinking people to try and secure proper adjustments so that mutual helpfulness might prevail among all classes of the country, and injustices removed, and every man should get a square deal as far as this is possible. It appears, however, that what we are drifting into, perhaps unconsciously, is the cheapest form of unworthy socialism, which is chiefly concerned in tearing down that which is stable in the hope of getting some share of the plunder. The pendulum is swinging that way and if it goes too far, as it now promises, it will bring about a condition which is inimical to all virtue and honesty, worthy ambition and fair dealing between man and man. **If, individually, some of us cannot make money at present it is well to remember that the one who can is a valuable asset to his country in her present need, and that upon all of us rests a very serious national obligation not only to try and make but to save.** As citizens of a great commonwealth, destined to be much greater if we play our part like men, and remembering our obligations to the body politic, no matter what class we may belong to, we should be much more concerned for what is right, straightforward, and of permanent value to the country at large than in trying to secure for any one interest or group that which is purely selfish or sectional. Should we not also in our discussions in private and on the platform, in the pulpit and the press, have a broader outlook based on larger knowledge of all great questions of production and trade, so vital to a new country, in order that we could thus deal with same on a non-partisan, less personal, but more logical and scientific basis? Unthinkingly we may help destroy that which is nationally indispensable, and in sowing the wind we shall reap the whirlwind."—Advertisement.

UNION TRUST COMPANY

Commendable action was taken by the directors of the Union Trust Company, Toronto, in making a stringent revaluation of its assets. It was rightly believed to be in the best interests of the company to have the securities tabulated in the annual statement on an absolutely sound and conservative basis. The assets were therefore specially revalued and a portion of the reserve fund was used to effect the necessary adjustment. Even after this change the company's reserve fund stands at $450,000, which is equal to 45 per cent. of the paid-up capital of $1,000,000. There is a possibility of recovering some of this depreciation when normal times return. In the meantime, it is undoubtedly a wise policy to carry the assets on the basis of values prevailing at the close of the year. The Union Trust Company, with other financial corporations has, as pointed out by Mr. H. F. Gooderham, the company's president, at the meeting, suffered from the depreciation in the value of securities. The wastage of capital due to the war has caused a severe reduction in the market value of first-class securities, such as Dominion and provincial government and municipal issues and has also had a serious effect upon the value of other investments.

The directors were able to report, at the annual meeting on Thursday, a satisfactory year's business. The company's income was somewhat less than that of the preceding year because of the generally disturbed financial conditions. In addition to the earnings shown in the statement, there are some accruing but not actually received. The net profits for the year, after payment of interest on guaranteed funds, cost of management, and expenses, amounted to $98,446 to which sum was added $36,531, the amount brought forward from the preceding year. This gave a total of $134,977 for distribution. Payment of quarterly dividends aggregated $85,000. War taxes, patriotic and other funds absorbed $6,509. To the reserve account $27,765 was transferred, leaving a balance to be carried forward of $15,702.

The retirement of Mr. J. M. McWhinney as general manager of the company was announced. Mr. James K. Pickett has been appointed acting general manager and will probably become general manager. He has managed the company's Winnipeg branch for nearly three years, having met with marked success in that position. Mr. Pickett is also well known in Eastern Canadian financial circles, and the affairs of the company should be well administered under his care as general manager. Mr. C. D. Henderson is secretary.

The London Life Insurance Company

HEAD OFFICE - - LONDON, CANADA

Forty-third Annual Report shows Wonderful Progress during 1917

BUSINESS WRITTEN .	$15,703,593.10	A GAIN OF .	$2,667,647.30
BUSINESS IN FORCE .	$50,787,365.64	A GAIN OF .	$9,072,048.23

Lapse Ratio and Expense Ratio again reduced in both Departments.

Quinquennial Profit Distributions for 1918, 155% of Estimates.

SYNOPSIS OF FINANCIAL STATEMENT

Revenue Account.

Receipts.		Disbursements.	
Total Premium Income	$1,908,100.62	Paid Policyholders or Heirs	$ 646,726.30
Interest on Investments	474,524.13	All Other Disbursements	716,995.57
Items in Suspense	2,472.93	Balance to Investment Account	1,021,375.81
	$2,385,097.68		$2,385,097.68

Balance Sheet.

Assets.		Liabilities.	
Mortgages, Debentures and Stocks	$6,798,746.83	Policy and Annuity Reserves	$7,270,186.00
Loans on Policies and Other Invested Assets	852,582.61	Accumulating and Accruing Profits	224,974.00
Outstanding and Deferred Premiums, Net	223,578.27	Investment Reserve and Other Liabilities.	249,883.64
Interest Due and Accrued	175,361.48	Surplus on Policyholders' Account	305,225.55
	$8,050,269.19		$8,050,269.19

THE ANNUAL REPORT EMBRACES THE FOLLOWING PARTICULARS:

BUSINESS. The gain in amount of New Business was over 20%. The Business in Force has more than doubled in five years and more than quadrupled in ten years.

INCOME. The Income shows a splendid gain of $400,000, also over 20% of the Income in 1916.

EXPENSE. RATE. Both branches of the business again show a reduction in the expense ratio as compared with the previous year, which again was very favorable, as compared with previous years.

ASSETS AND LIABILITIES. All Bonds, Debentures and Stocks owned by the Company have been carried into the Statement at a figure considerably below the current market value. As usual, the Liabilities have been provided for in the most ample manner—the reserve basis being more stringent than that adopted by any similar Company in Canada or the United States. The Liabilities include full reserve for all profits accrued under participating policies to date of statement.

WAR CLAIMS. Including the claims due to the Halifax Disaster, the War Claims of the year amounted to over $200,000—which, it is anticipated, is the largest strain the Company will be under in this connection in any future calendar year. The total claims of the year were well within the expected.

PROFIT DISTRIBUTIONS. The financial position of the Company is so strong that notwithstanding the heavy war mortality the liberal profit scale now in force is maintained and will give, during 1918, actual results 55% in excess of original estimates under present rates.

SURPLUS. The Surplus according to the Government Standard has increased from $834,642.58 at the beginning of the year to $945,513.55 at the close of the year. After deducting the amount necessary to bring the Reserves to the Company's Standard and providing for other special funds, the Net Surplus on Policyholders' Account is $305,225.55.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Armour Heights, Ont.—February 7—The building, six automobiles, five motorcycles and five side cars of the Royal Flying Corps were destroyed. Estimated loss, $15,000.

Belleville, Ont.—February 11—The Caldwell block on Front Street was damaged. Estimated loss, $7,000.

Dundas, Ont.—February 10—The Boyle block was destroyed. Estimated loss, $25,000.

Halifax, N.S.—February 6—St. Mary's Temperance Society Hall on Barrington Street was damaged. Estimated loss, $5,000.

London, Ont.—February 7—Office of the Grand Trunk Railway freight sheds and many books and records damaged. Caused by overheated stove. Estimated loss, $1,000.

Montreal, Que.—February 5—The "British 5, 10 and 15 cent store," at 2289 Ontario Street E., was damaged.

Moose Jaw, Sask.—February 4—Residence of S. Hutchins, 213 Hochelaga Street W., was damaged. Estimated loss, $700.

Oakville, Ont.—February 12—Major W. F. Eaton's country residence was destroyed.

Pottersburg, Ont.—February 5—The Dart's butcher shop was damaged.

Redbank, N.B.—February 1—House of John Arsenau's was destroyed.

Toronto, Ont.—February 11—Planing mills of C. B. Williams, on St. Albans Street was damaged. Estimated loss, $2,000. The building of the Canadian Novelty Wood Company was damaged. Estimated damage to building, $800; to contents, $200.

Wainfleet, Ont.—February 5—Barn of Mr. McCullom was destroyed. Estimated loss, $8,000.

Welland, Ont.—February 10—Hagar place was destroyed. Estimated loss, $5,000.

Weston, Ont.—February 12—Enameling room of the Canada Cycle and Motor Company was damaged. Estimated loss $300.

Windsor, Ont.—February 5—Home of Mr. Brady at 70 Crawford Avenue was destroyed.

Winnipeg, Man.—February 4—Restaurant of D. Rezzeni, 184 Higgins Avenue, was damaged. Caused by hot ashes left in wooden receptacle.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Fullarton, Ont.—December 20, 1917.—Chopping mill, saw mill and cheese box factory of R. J. Harmer was destroyed. Estimated damage to stock, $15,050; to buildings, $3,000. Insurance on buildings, $1,750; on stock, $700. Carried in the Waterloo Fire Insurance Company and Merchants Fire Insurance Company.

Toronto, Ont.—February 4—Passenger station and offices of Canadian Northern Railway were destroyed. Caused by defective electric wiring. Estimated damage to stock, $2,000; to buildings, $2,700. Insurance carried on stock, $2,000; on building, $2,700. Carried in the Western Assurance Company.

Vancouver, B.C.—Fire Chief Carlisle submits the following report for the month of January, to *The Monetary Times*: The estimated total damage resulting from fires (excluding figures in connection with the A. H. Timms Printing Company's loss, January 8th, which has not as yet been adjusted), was $12,620, of which amount $12,293 was covered by insurance, leaving the property loss above insurance at $327. The total value of the property involved was $720,850. The causes of fires are as follow: Backfire (carburetter), 2; backfire (from oil-burning furnace), 1; children playing with matches, 2; chimney fires, 24; defective chimney, 1; defective furnace, 1; defective furnace pipe, 1; defective stove pipes, 2; electrical origin (defective wiring), 3; hot ashes falling from forge, 1; hot ashes placed in garbage can left on floor, 1; match under flooring ignited by hot water pipe, 1; oil stove upset, 1; overheated furnace, 1; overheated stove, 1; spark igniting escaping gas near tar well, 1; spontaneous combustion (oily waste), 1; striking match near gasolene (auto tank), 1; tarpot boiling over and exploding gas meter underneath, 1; and Xmas tree decorations catching fire, 1.

Victoria, B.C.—Fire Chief Davies gives the following report for December, 1917, to *The Monetary Times*: Number of alarms received, 16; loss, buildings, $65; contents, $165; total, $230; insurance, buildings, $56,000; contents, $45,000; total, $101,000; property at risk, $694,550.

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times*:—

	Buyers.	Sellers.	Counter.
N.Y. funds	1 3-16 pm	1 7-32 pm	....
Mont. funds	par	par	⅛ to ¼
Sterling—			
Demand	$4.81	$4.81.25	$4.83½
Cable transfers	$4.82.10	$4.82.40	$4.84½

New York rates: Sterling demand, $4.75 5-16.
Bank of England rate, 5 per cent.

CANADA LANDED AND NATIONAL INVESTMENT CO.

Notwithstanding the high rates of interest demanded for debenture securities and the dearth of satisfactory mortgage investments, the Canada Landed and National Investment Company was able last year to meet all its obligations, to pay its usual dividend of 9 per cent., and to place to the credit of the profit and loss account $50,000, and this after making ample provision for any losses which may arise. The company's financial report shows that the reserve fund equals the paid-up capital, a condition which must be gratifying to the shareholders. The debenture debt has diminished by reason of the stringent financial conditions existing in Great Britain, and the consequent high rate of interest prevailing, conditions which naturally have a profit-reducing effect, a result not likely to improve during the continuance of the war.

Despite the high interest rates in Scotland, the limited demands for loans in Canada and the necessity to keep strong cash reserves, the company was able, after payment of all expenses, including war taxes and contributions to various patriotic objects, to show a net income of $158,209, equal to 13.129 per cent. of the paid-up capital. The company carried forward a balance of $197,601.

Mr. Edward Saunders is the managing director of the company, which is one of the oldest and most reliable of our mortgage loan companies. He has the support of a strong directorate, with Dr. John Hoskin as president. The company's financial statement reflects a substantial position.

CANADIAN GUARANTY TRUST COMPANY

The financial position of the Canadian Guaranty Trust Company, of Brandon, was considerably improved last year, judging by the satisfactory financial statement presented at the recent annual meeting. Most companies doing a trust and loan business have been affected materially by war conditions but notwithstanding that fact, this progressive little Brandon company was able to increase its earnings during 1917. Its net profits for the year after making the usual deductions were $14,509. These profits were made on a paid-up capital of $194,119. The company's rest and undivided profits are over $30,000. The net earnings, together with the balance brought forward, gave a sum of $20,215 for distribution. The company first transferred $5,000 of this amount to its reserve fund, which now totals $25,000. A small amount, $433, was written off office furniture and safety deposit boxes. Dividends absorbed $9,683. A balance of $5,099 was carried forward. This is slightly less than a year ago, but at the same time the reserve fund, as previously stated, was strengthened by $5,000.

In presenting the director's report to the shareholders, Mr. A. C. Fraser, president, pointed out that the company's assets were of the highest character, such as Dominion and municipal bonds, first-class mortgages and cash in bank. Mr. Fraser has, with Mr. John R. Little, the company's manager, taken an active part in its progress. The special work of the Canadian Guaranty Trust Company is the administration of estates. The company has an inventory value of unrealized original assets of estates, agencies, etc., under administration of $1,125,637. This corporation has been doing business for eight years and has made excellent progress.

Safeguarding the Investor

The Investor—whether he deals in large or small sums—should make sure of the reliability of the investment house with which he does business. He should know that he is receiving or paying the actual market price for his investment.

This is ensured when you deal with a member of the Toronto Stock Exchange.

If you are interested in buying or selling any security, you will get full information from any member of the Toronto Stock Exchange, without obligating you in any way. The following is a complete list of the members:

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

About $20,000,000 of Canadian municipals will mature in the United States this year. In view of the war financing requirements in that market, not only is it practically impossible to sell new issues there, but only in a few instances will we be able to effect renewals. This means that arrangements must be made in Canada to take up the greater part of the $20,000,000 municipal maturities.

Municipal finance will probably be one of the topics discussed at the conference of provincial premiers at Ottawa this week. It is generally conceded that we cannot afford to impair Canadian credit by defaults of bond interest or principal on the part of municipalities which have financed with a little too much optimism during the past few years. The primary responsibility is with the municipality, but the provincial authorities should be acting as counsel in their affairs at present.

Sarnia, Ont.—Tenders are called for $24,031 5½ and 6 per cent. bonds. M. J. Woods, city treasurer.

Dundas, Ont.—The tax rate will be thirty mills on the dollar. The estimated expenditure for the present year is $69,811, and receipts, $67,546.

Vancouver and North Vancouver.—The figures regarding the financial position of North Vancouver and printed under this heading in our issue of January 18th, were then incorrectly credited to Vancouver.

Vernon, B.C.—The land assessment within the city limits amounts to $2,173,296, with improvements valued at $1,517,000. The school district is assessed at $797,966 for land and $118,015 for improvements. The total this year shows a reduction of $31,481 from last year's assessment.

Victoria, B.C.—The city will float an issue of $300,000 worth of debentures locally. The sums obtained last year by sales of local improvement bonds justify the experiment, it is said. Data respecting the possibilities of subscriptions will be obtained in view of their experience with recent Victory Loan sales.

Brandon, Man.—The statement of assessment for 1918 issued by city assessor W. H. Bates shows a total of $15,050,025 assessed on the lands and buildings within the five wards of the city. In addition the statement contains a notice of a special B. tax of $70,000 levied in Ward Three. Business taxes amount to $333,268. The population of the city is given as 14,608.

Montreal, Que.—New taxation sanctioned by the Quebec legislature will enable the city of Montreal to raise an extra $4,500,000 per annum. The total revenue to be raised will be $16,000,000. The new taxation will bring in revenue as follows:—$10 per annum levy against bachelors, $200,000; increase in realty tax to five mills, $3,000,000; surtax of from one to five per cent. on plants of public utilities' companies on streets, $247,097; surtax of three per cent. on all paying rent over $150, $400,000.

Ladysmith, B.C.—The total assets of the city for 1917 aggregate approximately $200,000 while the liabilities, including all bond issues, only amount to a trifle over $100,000, this leaving a surplus of assets over liabilities of nearly $100,000. Of these liabilities $96,000 are bond issues, $85,000 of this amount is revenue producing, and the balance is practically all for permanent street work under the Local Improvement Act.

The city's most valuable asset is probably the electric plant, which is owned and operated by the municipality. During the past year this plant has furnished current for house, store, and street lighting, from which the revenue totalled about $11,000, with an operating expense of about $7,000. In addition to this, the city employs an electrician, who does practically all the electrical wiring and repair work in the city. This work is done at a minimum price for the citizens, and any profit that accrues from this source belongs to the public.

St. Lambert, Que.—A block of $175,000 town of St. Lambert, Que., 20 years 5¼ per cent. gold bonds is being offered by Messrs. Hanson Brothers, Montreal. The price is 93 and accrued interest yielding 6¼ per cent. On purchases of blocks of $10,000 and over, a concession of 1 point is being made, bringing the price to 92 and interest, yielding 6.65 per cent. The issue has been approved by the priority board of the Department of Finance. The following is a financial statement of the municipality as furnished by the town officials:—Assessed value of taxable real estate, $6,743,840; general debenture debt (including present issue), $555,992; less waterworks debentures, $137,091; electric light debentures, $33,224; sinking fund, $20,770—$191,085; net debenture debt, $364,907; local improvement debt (property owners share only), $601,898. Population, 5,000. Tax rate, 8½ mills.

The town of St. Lambert is an important residential suburb of Montreal, situated on the south shore of the St. Lawrence River, immediately opposite the city. By means of the Montreal and Southern Counties (Electric) Railway, via Victoria Jubilee Bridge, the business district of Montreal is reached in fifteen minutes. The municipality owns and operates its own water and electrical distribution systems. There is a provision in the by-law covering this issue, under which the annual sinking fund shall be deposited with and administered by a responsible trust company. St. Lambert is one of the few municipalities in the province of Quebec which has adopted this conservative plan whereby an annually increasing fund is deposited with a trustee for the redemption of bonds.

Lethbridge, Alta.—Mayor Hardie addressed a letter to the city council in regard to the proposed tax sale to include 1914, 1915 and 1916 arrears. After reviewing the tax situation he submitted the following plans for a reduction in the mill rate:—

1. (a) From the people by paying taxes promptly, reduction of luxuries in city affairs and an increase in electric light rates, 5 mills.

(b) By suspending the sinking fund for 5 years on the assumption that at the end of that period the population would be 20,000 souls, 7 mills. Total, 12 mills.

2. (a) Same as section (a) in first plan, 5 mills.

(b) Levying sinking fund on 5 per cent. basis instead of 3 per cent., 1¾ mills. Total, 6¾ mills.

3. (a) Same as section (a) in No. 1 plan, 5 mills.

(b) Extending sinking fund collection over 50 years on a 5 per cent. basis, 6 4-10 mills. Total, 11 4-10 mills.

"The above plans," he says, "would not be unjust to anyone. It is a matter of keeping faith, and in this connection the suspension of a sinking fund is at times deliberate and is essential in sound finance if money must be borrowed to maintain it.

"To borrow to keep up the sinking fund is purely a fictitious operation which really adds to the debt and in no wise reduces it. Of course the financial people do not recognize impossible conditions and say 'live up to your contract.' In the commercial world it has been found that this is not always possible, and the impossibility need not be followed by bad results, in fact in most cases where the situation is sound, as in Lethbridge, and carefully handled the result is good."

Calgary, Alta.—Arrangements have been made by the city of Calgary with The Molsons Bank for taking care of the city's $2,000,000 loan which falls due on March 15th next. The bank will pay off the $2,000,000 obligation to Spitzer, Rorick & Company, and the Quebec Bond Company, and act as agent for the city in the sale of treasury notes to an equivalent amount, at six per cent. for two and three years. The mayor at a recent meeting of the finance committee detailed his negotiations with United States financiers, and said the best offer that could be obtained from them was an extension of the $2,000,000 loan for six, ten and twelve months, at a substantial interest rate. It was to prevent the sacrifice of its debentures, or the payment of an exorbitant rate of interest that The Molsons Bank agreed to step in and meet the city's obligation on March 15th. The bank will charge no commission. It was pointed out that the arrangement is especially favorable in that the Dominion government has agreed to advance money to the provincial governments at 6½ per cent., or ½ per cent. more than the rate at which The Molsons Bank is undertaking to sell the city's treasury notes.

The proposed arrangement, recommended by the city's finance committee, in detail, is as follows:—

This committee recommends that the offer of The Molsons Bank to loan the city $2,000,000 on the security of a demand note for the said sum, bearing interest at the rate of 6 per cent. per annum, payable monthly, for the purpose of retiring the $2,000,000 issue of treasury notes maturing March 15th, 1918, be accepted.

It is understood that this agreement with the said bank for the said advance is to include the following terms:—

1.—A new issue of treasury notes for $2,000,000 maturing March 15th, 1921, bearing interest at 6 per cent. per annum, payable half-yearly, is to be deposited by the city with the said bank.

2.—The city is to hypothecate to The Molsons Bank as trustee for any subsequent purchaser or purchasers of the said treasury notes, the debentures now hypothecated to the said bank as security for the said issue which is to be retired.

3.—The said bank may sell the said treasury notes at its discretion on giving 60 days' notice of its intention so to do to the city, unless the city sells or redeems same in the meantime.

4.—In case of a sale of the said treasury notes by the said bank, the purchaser or purchasers of any such notes shall have the right, on thirty days' notice to the city, during the first two years from the date thereof, to exchange said notes for such amount of the said debentures held by the said bank as trustee for the said purchaser, and at such price as will return to the said purchaser 6 per cent. on his investment, this right of the purchaser to be exercisable only in the event the said debentures are not sold as hereinafter provided for.

5.—The city shall have the right to sell the said debentures at any time, on depositing the net sale price thereof, with the said bank as trustee, provided that if the city does not sell same within two years from the date of the said treasury notes, the bank, as trustee, may sell the said debentures on giving to the city sixty (60) days' notice of its intention so to do, unless the city, within the said period, sells the said debentures, or deposits with the bank a sum equal to the net sale price contemplated in such proposed sale. In the event, however, of the city or the bank selling the said debentures for more than is sufficient to redeem the said treasury notes, or such portion thereof as may then be outstanding, only such sum as is required for the purposes of redemption shall be deposited or retained.

6.—It is further understood that any further terms or conditions required by the said bank shall be submitted to the council for approval, and the solicitor of the city is hereby authorized to prepare and submit the necessary by-laws, agreements and form of treasury notes to the council for its consideration.

Incidentally, the committee also approved the tentative agreement made by the mayor with The Molsons Bank for advancing the city $1,000,000 for current expenses on the same terms as last year; that is, the money is advanced against the 1918 taxes at 5 per cent. up to the amount in the city's sinking fund, approximately $6,000,000, and at 6 per cent. above that sum.

ABITIBI POWER AND PAPER COMPANY

The annual statement of the Abitibi Power and Paper Company, Limited, submitted at the meeting of the shareholders on Monday, showed that the company's earnings for the year 1917, before providing for depreciation, exhaustion of timber areas, interest, etc., were $1,323,001. For depreciation, writing off, etc., there was appropriated $981,879, and a balance of $341,123 was carried forward. This, added to a surplus of $360,925 at the end of 1916, made a total of $702,047, out of which were paid dividends on the preferred stock amounting to $70,000, leaving a net surplus of $632,048 at December 31st, 1917.

The year's net surplus of $341,123 before dividends compares with $256,164 in 1916. If a full year's dividend on the preferred stock were allowed for in each case the surplus would equal 5.4 per cent., earned in 1917, against 3.7 per cent. in 1916. In view of the fact that no details are given as to the nature of the large appropriation for reserves, etc., no other comparisons are possible. The gross profit, $1,323,001, compares with $625,878 in 1916. The only point of difference in this comparison is that interest was deducted after showing gross profit in 1917 and before showing gross profit in 1916. In the property account for the year was included an expenditure of $2,162,897 on extensions and improvements by which the daily capacity of the plant is increased to 325 tons ground wood pulp, 130 tons sulphite pulp and 225 tons of paper.

Additional capital, rendered necessary by increased production and increased cost of operation, was obtained through the issue and sale of $1,000,000 of 15-year 7 per cent. convertible debenture stock.

Canadian Guaranty Trust Company

Report of the Proceedings of the Eighth Annual Meeting of Shareholders

The Eighth Annual General Meeting of the Shareholders of the Canadian Guaranty Trust Company was held in the Company's Board Room, 1031 Rosser Avenue, Brandon, on Wednesday, the 6th day of February, 1918.

Those present were: J. B. Beveridge, A. C. Fraser, A. A. Cameron (Oak Lake), Robt. Johnston, Elam H. Smith, G. R. Campion (Belleview), J. S. Maxwell, John R. Little, J. A. McDonald, D. A. Reesor, Thos. Beattie, H. L. Adolph, John Crawford, G. S. Munro (Reston), J. K. McInnis (Regina), S. S. Simpson, J. A. Dempsey (Neepawa), Wm. Ferguson, John A. Dyer, Hon. G. R. Coldwell, J. S. Nelson, Jos. Donaldson, John T. Clark.

The Secretary called the meeting to order. On motion of Mr. George R. Campion, seconded by Mr. J. S. Maxwell, the President, Mr. A. C. Fraser, was called to the chair.

The Secretary read the notice calling the meeting and proof of mailing the same; also reported as to quorum.

After the Minutes of the previous Annual General Meeting had been read and adopted, the Secretary read the Eighth Annual Report of the Directors, the Financial Statement and the Auditor's Report, as follows:—

To the Shareholders:—

In submitting the Eighth Annual Report of the Company for the year ending 31st December, 1917, your Directors have pleasure in noting the satisfactory results obtained.

Notwithstanding all the adverse circumstances which were experienced because of war conditions, the earnings of the Company have been increased and its financial position considerably improved.

After providing for the regular dividend for 1917, the Rest and Undivided Profits of the Company are now over thirty thousand dollars on a paid-up capital of less than two hundred thousand dollars.

The assets are of the very highest character, the greater portion of them being Dominion of Canada Bonds, First Class Mortgages, Municipal Securities, and Cash in the Bank.

The special work of our Company, which is the Administration of Estates, is rapidly growing, as is indicated by the financial report. It is gratifying to know that the handling of this important part of our business has given great satisfaction, as is shown by the written and personal approval received from those with whom we have done business.

Your Board specially recognize the commendation due the employees of the Company for their faithful services.

Respectfully submitted.

A. C. FRASER,
President.

FINANCIAL STATEMENT FOR YEAR ENDING DECEMBER 31st, 1917.

AUDITOR'S CERTIFICATE.

I hereby certify that I have made a monthly audit of the books of accounts of the Company, and that the above Balance Sheet and Profit and Loss Statement are true, correct and full statements of the condition of the affairs of the Company as on December 31st, 1917, as disclosed by the said books of accounts.

The Cash and Bank Balances have been certified, and the Mortgages found duly certified as valid by the Company's Solicitor. The Trusts and Estates are in good order and are being well and carefully administered.

J. B. BEVERIDGE,
Auditor

Brandon, Manitoba, January 9th, 1918.

The Scrutineers reported the following elected as Directors for the ensuing year, namely: A. C. Fraser, Lieut.-Col. A. L. Young, John R. Little, Hon. George W. Brown, Wm Ferguson, H. L. Adolph, E. O. Chappell, J. S. Maxwell, John A. McDonald, G. S. Munro, Hon. W. M. Martin, John E. Smith, A. A. Cameron, D. A. Reesor.

At a meeting of the Directors held subsequent to the meeting of the Shareholders, Mr. Alex. C. Fraser was appointed President; Lieut.-Col. A. L. Young, Vice-President; and Mr. John R. Little, Managing Director.

C.N.R. OWNS 51 PER CENT. OF STOCK

That Mackenzie, Mann and Company, as owners of 49 per cent. of the stock of the Duluth, Winnipeg and Pacific Railway, would be entitled to a pro rata share of the profits from this road, even after the arbitration on the value of Canadian Northern Railway shares is decided, was the interesting admission which government counsel, W. N. Tilley, K.C., elicited from D. B. Hanna in his cross-examination of the Canadian Northern Railway's third vice-president at the arbitration proceedings at Osgoode Hall on Tuesday. The Canadian Northern Railway owns the remaining 51 per cent. of the stock in this company in return for guaranteeing the bonds of the road, Mr. Hanna stated. He also admitted, in reply to Mr. Tilley, that the earnings of this and other subsidiary lines where minority stock is held were included in the statement of Canadian Northern Railway earnings.

PREFERENCE IN EXCHANGE DISCUSSED

Much hard thinking is going on respecting Anglo-Canadian and Empire finance, as shown by such suggestions as made by Frederick Goodenough, general manager of Barclay's Bank, who proposes an inter-imperial trading preference by the creation of a fixed rate of exchange between London and all Empire centres.

Moreton Frewer, an acknowledged authority on monetary questions, gives the Montreal Star's London correspondent the following forecast of Canada's position: "Mr. Goodenough's rank compels respect for his suggestion, but what regulates exchange is the bill market, some relation between exports and imports, which, again, depends upon the weather, harvests and other things. Canadian exchange must always be more closely associated with exchange with New York, Chicago and St. Louis than London. Nothing we do could dissociate the exchange of Winnipeg with Chicago. Canadian exchange on London after the war should strongly favor Canada. We here are likely to see strange results. London exchange on New York, and thus on Montreal may go for a long period to some point well below $4.50, and perhaps to $4. That makes the United States market the one for Canada to sell in rather than the English market. On the other hand, it would greatly stimulate British exports to Canada and the United States, and in this way ultimately restore exchange. There is no exchange trouble ahead for Canada."

BANK CLEARINGS

The following are the bank clearings for the weeks of February 8th, 1917, and February 9th, 1918, respectively, with changes:—

	Week ended Feb. 9, '18.	Week ended Feb. 8, '17.		Changes.
Montreal	$ 72,815,914	$ 81,715,255	—	$8,899,341
Toronto	53,566,128	57,034,118	—	3,467,990
Winnipeg	39,677,076	38,723,968	+	953,108
Vancouver	8,826,365	5,824,281	+	3,002,084
Ottawa	5,615,195	4,939,424	+	675,771
Calgary	6,517,822	3,861,545	+	2,656,277
Hamilton	4,660,822	4,189,058	+	471,764
Quebec	4,195,951	3,968,641	+	227,310
Edmonton	2,918,667	1,967,143	+	951,524
Halifax	3,928,212	2,595,660	+	1,332,552
London	2,373,643	2,314,133	+	59,510
Regina	2,831,298	2,185,448	+	645,850
St. John	2,232,737	2,030,291	+	202,446
Victoria	1,871,148	1,324,146	+	547,002
Saskatoon	1,490,488	1,202,873	+	287,615

Brandon	547,665	367,438	+	180,227
Brantford	845,785	732,579	+	113,206
Fort William	699,884	536,320	+	163,564
Lethbridge	667,788	592,787	+	75,001
Medicine Hat	558,681	355,346	+	203,335
New Westminster	400,193	235,044	+	165,149
Peterboro'	686,588	522,037	+	164,551
Sherbrooke	696,714	574,674	+	122,040
Kitchener	653,141	499,746	+	153,395
Totals	$220,415,520	$219,113,063	+	$1,302,457

UNITED STATES CREDITS TO ALLIES

Since January 30th, the United States government has extended to the Allies additional credits totalling $437,000,000. In other words, the amount already extended this month is within about $70,000,000 of the estimated monthly total of $500,000,000. Of the credits extended so far this month, Great Britain has received $275,000,000, France $155,000,000, and Belgium $7,000,000. The total now stands at $4,684,400,000.

The following shows the credits in detail at present compared with what they were as of January 30th:—

	February 8.	January 30.
Great Britain	$2,320,000,000	$2,045,000,000
France	1,440,000,000	1,285,000,000
Italy	500,000,000	500,000,000
(x) Russia	325,000,000	325,000,000
Belgium	93,400,000	86,400,000
Serbia	6,000,000	6,000,000
Total	$4,684,400,000	$4,247,400,000

(x) Includes $5,000,000 to Rumania for which Russian "Government" has assumed responsibility.

RAILWAY EARNINGS

The following are the earnings of Canada's transcontinental lines for the first week in February:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
February 7	$1,890,000	$2,096,000	+ $206,0

Grand Trunk Railway.

February 7	$ 928,462	$ 675,115	— $253,347

Canadian Northern Railway.

February 7	$ 493,000	$ 634,600	+ $141,000

The Canadian Northern Railway's earnings for the month of December, 1917, were:—

	1917.	1916.	Inc. or dec.
Gross	$3,273,200	$3,485,400	+ $212,2
Expenses	3,207,900	2,661,600	— 546,3
Net	$ 65,300	$ 832,800	— $758,5

Gross earnings of Canadian railroads for January, owing to the bad weather prevailing and the consequent hindrance to traffic, showed a decrease from those for the corresponding month a year ago. Earnings of the three principal Canadian roads aggregated $17,368,662 for this January, a decrease of $82,326, or .5 per cent., but an increase over the aggregate for any previous year.

The aggregate earnings for the month by roads are as follows:—

Road.	1918.	Increase.	Per cent.
Canadian Pacific Railway	$10,570,000	$629,000	6.3
Grand Trunk Railway	4,083,362	*594,026	12.0
Canadian Northern Railway	2,715,300	*117,300	4.1
	$17,368,662	*$ 82,326	5

*Decrease.

The following is a comparison of the earnings of the last ten days of January:—

Road.	1918.	Increase.	Per cent.
Canadian Pacific Railway	$ 3,535,000	$464,000	15.1
Grand Trunk Railway	1,302,645	*262,015	10.7
Canadian Northern Railway	948,200	18,600	2.0
	$ 5,785,845	$220,585	4.0

*Decrease.

Gross earnings for January, 1918, compare with those for the seven previous years as follows:—

January.	Total gross earnings.
1918	$17,368,662
1917	17,450,988
1916	14,724,216
1915	10,758,213
1914	13,056,233
1913	15,080,648
1912	11,851,386
1911	9,853,839

Government of the Province of Manitoba

NATIONAL IMPORTANCE OF LIFE INSURANCE

Heavy War Claims Paid by the Companies—Substantial Investments in War Loans

The national importance of life insurance was the subject of interesting comment by Mr. J. F. Weston, managing director, at the annual meeting of the Imperial Life Insurance Company recently. He stated that it was an astonishing fact in these days of frequent considerations of the relative importance of institutions to the state the question is so often seriously asked by tribunals, "Is life insurance of real national importance?" "It would seem," said Mr. Weston, "that we, who are constantly engaged in the business had become so familiar with the affirmative evidence on this question that we had come to consider the fact of its national importance so completely obvious that it did not require to be urged. It is apparent, though, that we must state and restate the case many times and in high places before life insurance receives in Canada the national recognition and support it has had in England and other European countries. We do not expect, or ask, such consideration at the present time, but simply that we be left free of any additional imposts in the way of increased taxes, which would add anything to the burden which our policyholders are now carrying in the heavier mortality which we are experiencing as a result of the war.

Increase of War Claims.

"In the companies licensed to do business in Canada, the war claims on Canadian business increased from $1,957,000 in 1915 to $4,961,000 in 1916. The total death claims of the same companies in 1915 amounted to $13,481,000 and in 1916 to $17,396,000, so the war claims in 1915 were 14 per cent. of the total and in 1916 they amounted to 26 per cent. It certainly is in the national interest that so considerable an amount should have been paid to the beneficiaries of those who have fallen in the national cause.

"The companies have borne this increased mortality without any effect upon their solvency. They continue the strongest of our financial institutions, with unimpaired ability to discharge their full liabilites to their policyholders and to extend the beneficent protection which they afford, to meet the growing demand for it amongst the Canadian people. These war claims, however, do affect the amount of profits, which otherwise would be paid to policyholders. This sacrifice on their part must continue to be very considerable while the war lasts and should be considered so far as it relates to their insurance as their full and reasonable contribution to its cost.

"In this connection we should acknowledge the wisdom and justice of the minister of finance in exempting life insurance from the federal tax, which, if it had been imposed, would have borne unduly on a class which is already paying more than other classes.

Life Companies' War Risks.

"These war claims we have paid cheerfully and without a single complaint from policyholders. If it were possible we would like to extend protection to embrace all who are exposing their lives in the interest of the country, but this is not possible to the companies at premium rates which would prove practicable. We are carrying the extra risks under policies issued before the outbreak of the war without extra charge, and a small amount at an extra premium under policies issued since. The amount of war risks now carried by the companies is such as they can safely assume without any risk to their solvency. Life insurance companies in all the belligerent countries have furnished a splendid example of the solvency and safety of the institution of old line legal reserve insurance. Under the present unexpected and trying conditions none have failed to meet their obligations. Considering the heavy strain to which European companies have been subjected by comparison with any demands which can be made on Canadian companies, we have no ground for the slightest apprehension as to our ability to meet any exigencies which may arise as a result of the war.

Life Insurance as a Stabilizer.

"Life insurance has become so general that it now constitutes the chief asset in a vast majority of estates left by the Canadian people. In addition to its being the great stabilizer of business and social life, which it has become in normal times, it has demonstrated its great importance to the nation under the emergency caused by the disintegrating influence of the war.

"In regard to war loans the life insurance companies demonstrated again their peculiar advantage to the state. For generations the agents had carried on their persistent propaganda of thrift, educating the people as to the advantage of protection and saving till at the end of 1916, as shown by the report of the superintendent of insurance, there were in force in Canada 2,183,381 policies for $1,422,179,000 of insurance and the assets in Canada of the companies operating here amounted to $418,526,000. This large sum of assets, made up of the small individual savings of millions of people, at once became of great importance to the state. The companies have invested heavily, not only of their current income, but have disposed of other securities where it was practicable to subscribe heavily for Dominion bonds. Assuming that on the average the companies have subscribed 15 per cent. of their assets, and the total assets as I have stated are $418,526,000, then the amount of these bonds taken up by the life companies aggregate $62,779,000. This percentage will be greatly increased as new issues offer. The nature of the business of life insurance makes the holdings of these bonds by the companies of peculiar importance for they will largely be held as permanent investment till they mature and so remove them from becoming a disturbing factor by being thrown on the market at some inopportune time.

"The fact that our business has demonstrated such usefulness in an unexpected emergency by furnishing available funds for government needs and by meeting the claims resulting from war, without impairment of our financial strength, has served to stimulate all of us who are engaged in its service to increased endeavor to extend its advantages to cover a large portion of modern need."

ALBERTA'S FARM PRODUCTS

Two hundred million dollars from Alberta farms, without including the live stock, is a conservative estimate of the yield in 1917. The provincial department of agriculture issued the following final estimate of the yield:—

Crops.	Acres.	Yield per acre, bushels.	Total yield, bushels.
Spring wheat	2,845,600	18.25	51,932,200
Fall wheat	51,700	20.50	1,059,900
Oats	2,537,900	34.00	86,288,600
Barley	472,100	22.00	10,386,200
Rye	30,880	20.50	633,000
Peas	1,851	17.50	32,400
Mixed grains	24,027	25.75	618,700
Flax	139,800	7.00	978,600
Potatoes	48,917	151.46	7,409,000
Turnips, etc.	10,947	207.56	2,272,000
		Tons.	Tons.
Hay and clover	493,522	1.48	730,400
Fodder corn	3,976	1.00	4,000
Alfalfa	31,396	2.05	64,400

CANADIAN WAR TRADE BOARD DECIDED UPON

The proposed Canadian War Trade Board has been decided upon by the Dominion government. It is to consist, in the main, of men already in the service of the government, who have been doing much of the work that will come under the supervision of this body. By selecting officials, such as Mr. F. C. T. O'Hara, deputy minister of trade and commerce; Mr. E. Fitzgerald, of the Munitions Board; the food controller; Dr. A. B. Macallum, chairman of the Honorary Advisory Council of Scientific and Industrial Research, and the chairman of the Canadian Wool Commission, it is declared that much valuable time will be saved, as they are all familiar with the aims and objects of a war trade board.

For several months past the manufacturing interests more particularly have been urging the appointment of this body, but it was only recently that the idea took root at the capital. The United States embargoes and the many other interferences with the United States-Canadian trade have made it very difficult for many Canadian industries to carry on, and it is expected that the board will soon be able to give much of its time towards facilitating the transfer of necessary raw materials and other commodities to and fro across the border.

CRISIS IN PULP AND PAPER INDUSTRY?

C. Howard Smith Predicts Strenuous Times Ahead—Manufacturing Conditions

"The year 1917 will live long in the annals of the pulp and paper trade, as being one of the most critical and important periods of the industry," said Mr. C. Howard Smith in his address at the fifth annual meeting of the Canadian Pulp and Paper Association held at Montreal last week. "In the early part of the year," he continued, "the extraordinary demand for pulp and paper that had commenced in 1916 continued, and to a certain extent increased, the peak being reached in March and April, the demand then slackening gradually to a normal and in some lines a subnormal demand. Notwithstanding this enormous demand of pulp and paper for export, the mills continued to supply the regular requirements of Canadian trade, and no Canadian industry suffered for want of paper.

"The constant attacks on the industry by the publishers, and notwithstanding the fact that they were being supplied with paper at more than 15 per cent. less than the paper would have brought in foreign markets, led the government to fix a price of 2½ cents per pound on newsprint. As the consumption of newsprint in Canada is only approximately 14 per cent. of the total manufactured, the manufacturers were compelled to accept this price, and to endeavor to meet the situation by a distribution of tonnage and an arbitrary cash contribution from the different mills, who were not manufacturing for Canadian requirements."

"The investigation made by Controller R. A. Pringle, K.C., has borne out the contention of the manufacturers, as to costs, etc.

Importance of Industry.

"The pulp and paper industry is one of the basic industries of this country, and it is of the utmost importance that it should expand and increase its exports, so as to help maintain Canada's favorable trade balance." Mr. Smith then quoted the following figures:—

In the year ended March 31, 1890, the exports of pulp and paper were $168,302. For the year ended March 31, 1912, the exports were $8,961,424. For the year ended March 31, 1917, the exports were $46,476,699, an increase in five years of $37,515,275. These exports can still be increased and a greater amount of prosperity brought to Canada provided the manufacturers of pulp and paper are not hampered by unjust legislation, but are treated in the same manner as any other manufacturers.

The imports for the year ended March 31, 1912, were $6,352,463. The imports for the year ended March 31, 1917, were $6,848,422. These imports are made up of a great variety of paper and paper products, but there is room here for several mills to specialize and take care of this demand. The development of pulp and paper manufacturing requires large capital investment and great risks, as it is always a pioneer industry and means the opening up of new country. An adequate return on capital must therefore be allowed for, and an opportunity to obtain a return commensurate with the risk involved. A return of 7 per cent. on an industry of this nature is not sufficient, when governments are offering 5.86 per cent. on bonds, and many municipal and foreign bonds will yield a return of 8 per cent.

Manufacturing Conditions Severe.

In referring to the general conditions, Mr. Smith said: "The manufacturing conditions for 1918 will be severe, supplies of raw material are low, and almost impossible to secure. The coal situation could not be worse and there does not seem to be any immediate prospects of improvement. It is a serious menace to Canada, as the country only supplies about half the regular consumption, the total consumption being some 300,000,000 tons of both bituminous and anthracite. The coal production of Canada should be increased to the greatest possible extent, and so far as possible Canada should supply its own requirements. The production of other sources of fuel such as lignite and peat should receive the greatest possible attention from the government and every facility given to develop these different sources of fuel.

"In this connection the development of Canada's water powers assumes even greater importance.

"The labor market is short of men, and with the continued call on men for the front and for the vital industries, there is no sign of improvement. This shortage in labor has materially increased the cost of wood, and has seriously reduced the amount of wood gotten out. In the last ten years the cost of getting out wood has more than doubled. The car shortage has already been the cause of several periods of shut downs in some mills.

"Regarding the pulp industry," said Mr. Smith in conclusion, "it is of vital importance that technical education be greatly extended in this country, so that properly equipped men may be available to meet the growing demand for trained men. This section is doing pioneer work in this respect, and deserves the greatest encouragement from the executives of the different companies."

CANADIAN NORTHERN RAILWAY'S STOCK

Vice-President Hanna Outlines History of Road—Anticipated Country's Development

Mr. D. B. Hanna, third vice-president of the Canadian Northern Railway, a witness heard by the Board of Arbitration sitting at Osgoode Hall, Toronto, to determine the value of the shares of Canadian Northern Railway stock, outlined the company's history. He gave details as to company's progress from a 100-mile-line in 1896 to a completed transcontinental with 10,000 miles of track, showing that the management had earned a surplus over expenses and fixed charges since the first year of operation and pointed out that in annual periods since the transcontinental line had been completed the surplus had approximated 9 per cent. on the common stock. No dividends had been paid, he said, and the surplus had been put back into improvements.

Anticipated Country's Development.

His recital of the history of the enterprise also indicated that the expansion of the railway had anticipated the development of the country and had been an important factor in the settlement of the west. The company had been the first to introduce a competitive element in the transportation situation in the west, he remarked, and since 1901 the farmers of the prairie provinces had been relieved of freight charges approximating $39,000,000 on grain alone, owing to the reduction of rates instituted by the Canadian Northern Railway. The policy of the company regarding the construction of branch lines had, he said, been dictated by the provincial governments concerned, but, he added that there was not a branch line in the prairie sections of the system which would not justify its existence.

Goosa Lake Line.

Questioned by Sir William Meredith as to the value of the Goose Lake Line between Saskatoon and Calgary, Mr. Hanna ridiculed the suggestion that the particular branch was behind in values. "It is one of the most valuable parts of the system," he said. It had opened up one of the richest sections of the Saskatchewan valley, and in addition to the many millions of bushels of wheat which the railway now hauled out of the newly opened territory they were hauling an average of 150 cars of coal each day from the mines at Drumheller, and extensions to the coal mining operations indicate that next year a minimum of 250 cars a day will be brought over the line from the mines.

Speaking more directly of the valuation of the system Mr. Hanna called attention to a factor of values that had been overlooked in the Drayton-Acworth report in the form of the physical advantages of the road, which had been secured by low gradients and easy curvatures.

Fifty Cents on Dollar.

In further evidence before the Commission on Monday, Mr. D. B. Hanna, third vice-president of the Canadian Northern Railway, in reply to Mr. Pierce Butler, an American attorney representing Messrs. Mackenzie and Mann, declared that the Canadian Northern Railway stock is worth fifty cents on the dollar. In dollars and cents Messrs. Mackenzie & Mann want $30,000,000 for 600,000 shares of stock upon which the Drayton-Acworth report placed no potential value, while the government suggests $10,000,000 as the outside figure upon which the arbitrators are to base their finding. Mr. Hanna said that the company had no alternative but to give the government $40,000,000 worth of stock for guaranteeing a bond issue of $45,000,000.

Mr. Hanna criticized the Drayton-Acworth report, which declared that the stock of the Canadian Northern Railway was valueless, and noted the omission of many of the assets of the company in the report, calling them "inexcusable omissions of assets." If the arbitrators accepted the reserve

gure of $40,000,000 for depreciation, there was still a sur-lus of over $52,000,000.

"Had the Canadian Northern Railway supplied erroneous nformation," continued Mr. Hanna, in charging the Drayton-cworth report in being probably wrong in its conclusions re-pecting assets and liabilities, "or had the company concealed s assets or liabilities improperly, there might have been ome reason for the inexcusable omissions of the assets of ie company. The figures furnished the Commission were ot gathered together in a haphazard manner; they were pre-ared by careful investigation and approved by the govern-ent auditors." At this point, Sir William informed Mr. anna that he did not think it proper for him to criticize the eport of the Royal Commission.

aith in Possibilities.

Mr. Hanna stated he had sufficient faith in the future ossibilities of the Canadian Northern Railway to predict iat the company will give more than a substantial return the government for the money invested, providing politics re kept out.

"Nothing has been charged in the capital account know-ngly," added Mr. Hanna. "In other words, the statements the Canadian Northern Railway from year to year have not een cooked so as to make a better showing of the financial osition of the company than really was the case."

Sir William—Were the lines drawn as to maintenance and etterments?

Mr. Hanna—Certain items of improvements were divided artly to maintenance and partly to betterments. Things ay not have been done with the accuracy that they ought to ave been done. I might add that the interest on discount nd bonds issued was charged to the capital account. It is till there, and I make no bones about it.

ubsidiary Roads in West.

Tracing the history of the various subsidiary roads in the est, and their connection with the Canadian Northern Rail-ay, Mr. Tilley pointed out that of the Duluth, Winnipeg and acific line, in which the Canadian Northern Railway own 51 per cent. interest, and the Mackenzie & Mann Company 49 per cent. interest, with no working lease of the road, the earnings in the report were shown as Canadian Northern Railway earnings. Mr. Hanna said this was attributable to the fact that the Canadian Northern Railway had guaranteed the bonds of the company.

INDUSTRIAL ACTIVITY IN BRITISH COLUMBIA

(Staff Correspondence.)

February 9th, 1918.

Industrial activity in British Columbia continues. The receipt of further shipbuilding orders by the Wallace Shipyards means that for many months the North Vancouver waterfront will be busy. The construction of another large pulp plant has been announced. With the settlement of the strike at the Trail smelter, mining has now no untoward feature, and the outlook is for large production during 1918. The output of coal last year was big, and this year it will be greater.

The contract for the Wallace Shipyards is for four steel steamers to be built for the Canadian government. They will be each 5,100 tons, 337 feet long, 46 feet 6 inches beam and 25 feet depth. The aggregate cost will be over $5,000,000. The placing of this order means that sixteen steel ships are being built or about to be built in Vancouver in addition to the large number of wooden steamers and auxiliary ships now under construction.

A pulp plant is to be erected by White Brothers, of Boyne City, Mich. About ten years ago they secured large timber areas at the northern end of Vancouver Island from McLean Brothers, Vancouver. Although members of the firm have been on the coast from time to time since then investigating conditions, development of the limits has not been proceeded with, and recently it was stated that something was proposed. The mill will be located at Beaver Cove, five miles from Alert Bay, where deep water facilities are excellent.—R. B. Bennett.

VICTORIA'S TAX SITUATION

Committee Recommends That Arrears Be Payable Over Long Period

A special committee has made its report regarding the tax situation in Victoria, B.C. The committee states that it felt obliged to consider the position not only of the delinquent taxpayers, but the effect of continued delinquency upon the value of all other property and upon the financial obligations of the city. It was deemed advisable to deal with the problem as a whole and not to limit the recommendations of the committee to any one phase.

The following are reported as the dominating factors:—

(1) Less than two-thirds of the taxes, both general and local improvement, for 1916 and 1917, were paid at the end of these years respectively, as the following table shows:—

Proportion of Taxes Paid General.

1912.......	97 per cent.	1915.......	69 per cent.
1913.......	96 per cent.	1916.......	61 per cent.
1914.......	82 per cent	1917.......	62 per cent.

Local Improvement.

1915	56.20 per cent.
1916	47.8 per cent.
1917	38.74 per cent.

(2) Present arrears of taxes amount to $3,351,883.

(3) There is a tendency among those who can pay taxes not to do so, because others in arrears are not forced to pay.

(4) A very considerable portion of the total assessed values of the city is now not paying taxes.

(5) The value of all property in the city is being affected by the mass of property which in the future may be offered at tax sales.

(6) It is in the interest of all property owners that some solution should be found of the present difficulties. No such solution is possible unless the causes which have led to the non-payment of taxes are included in a comprehensive scheme.

Special Attention to Causes.

Among these causes the committee has given special attention to the following:—

(a) Over-assessment of some properties so that the general taxes more than absorb the equity.

(b) Local improvements charges which more than absorb the equity in some arrears.

(c) Accumulation of arrears which the owners are not in a position to pay in any one year.

(d) Position of those who have paid taxes if those in arrears are relieved.

(e) Disputes in respect to some local improvement bylaws.

(7) The Municipal Act provides that no assessment can be increased without giving the taxpayer the right of appeal to a court, and under present conditions such appeals might lead to undesirable reductions in assessments.

(8) Reduced aggregate assessments do not lessen the taxes which will have to be obtained from the land, as the same proportion of the city's revenue has to be obtained from these taxes under any circumstances.

Should Restore Equity.

(9) It is in the general interest that an equity should be restored if possible to properties which are now overwhelmed by general and local improvement taxes.

The committee makes the following recommendations, which will remove the principal causes of the non-payment of taxes:—

1. Arrears of taxation to the end of 1917:—

(1) Arrears of taxation, both general and local improvement, subject to any relief which may be granted as hereinafter provided, should be made payable in fifteen yearly instalments covering the net amount of the taxes when originally due, with interest at the rate of 7 per cent. computed annually.

(2) All taxpayers paying the first instalment before the 30th June, 1918, should be entitled to the benefit of this extension, which should not imply any further personal covenant than at present exists in respect to taxes.

(3) All taxpayers in arrears to the end of 1917 should be allowed the privilege of paying the net amount of the taxes, with interest at the rate of 5 per cent. per annum, on or before the 30th June, 1918.

(4) There should be a tax sale this year of all properties in respect to which the taxes for 1914 or earlier have not been paid, unless the arrears of taxes have been extended or paid as provided above.

Would Readjust Valuation.

2. Assessment:—

(1) Powers should be obtained to fix the aggregate assessment of all land within the city at a figure which shall be approximately that of the aggregate assessment for 1918.

(2) An independent commission be appointed to readjust the relative assessment of all lands within the city so that the aggregate assessment so made shall be within 5 per cent. of the pivot assessment above-mentioned.

(3) The readjustment so made shall remain in force for three years.

(4) There should be no appeal from the decisions of the commission, providing, however, that any taxpayer who considers that an error has been made may appeal to the commission itself within a stated period.

3. Excessive Local Improvement Charges:—

Roads, sidewalks, etc.—A charge per front foot should be made against all properties, with assessments for roads, sidewalks, etc., representing the fair charge which such properties should pay for the benefit received from the improvement. That where the present levy exceeds the standard charge any excess should be absorbed by the general revenue.

Commission on Expropriations.

4. Expropriations, etc.:—

A commission should be appointed to decide what relief, if any, should be granted in respect to cost of expropriations, taking into consideration the desirability of restoring an equity to properties now overwhelmed by local improvement outlays, and that the decision of such commission should be final. That if relief be granted to taxpayers no distinction should be made between those who received compensation and those who did not.

5. Cases where by-laws cannot be passed owing to disputes:—

Where by-laws are held up owing to disputes, the commission dealing with the expropriation questions should be authorized to draw up a settlement fair to all parties.

6. If assessments for local improvements are reduced, those taxpayers who have paid instalments of the original assessments should receive credit for any excess over what they would have paid on the reduced basis, in the form of a voucher, which may be applied to succeeding payments of the assessment reduced, or if there are no further payments to be made on account of the assessments in question, then in payment of other city taxes due by the holder of the voucher, or if the holder of the voucher has no property subject to taxation, then the vouchers may be transferred to another taxpayer.

Should Have Statements.

7. If the foregoing or any other remedial scheme is approved, statements should be prepared giving as far as possible the effect on the properties affected and on the city finances, taking into consideration the probable early payment of a considerable portion of the taxes now in default.

The committee recommends that legislative powers be obtained to bring a comprehensive scheme into force, as they feel that good results will not follow an attempt to deal with the difficulties in a piecemeal manner.

Discussing the proposal to have arrears paid in fifteen yearly instalments, it was held by some members of the council that twenty years would be a more suitable arrangement, the contention being that Mayor Todd's proposal for a ten-year period would fail to meet the situation. However, the clause was left as it stood.

Sell 1914 Delinquent Lands.

It was held that the tax sale should be made to extend to 1914 delinquent property, it being claimed that to include only 1913 and previous years would be useless to the city. The possible revenue that the 1913 sale would bring in totalled $87,000, but probably sixty per cent. of this would be written off the books by the taxpayers who met the 1913 dues and thus became exempt for the following years.

Respecting the appointment of a commission, it was advocated that its personnel be strictly independent and that the city assessor wield no power whatever, being confined to only a consulting and advisory capacity.

ASSURANCE COMPANY OF CANADA

Head Office : WINNIPEG

AT THE ANNUAL GENERAL MEETING of the Company, held on the 6th inst., the Financial Report and Statement of affairs showed that the steady, solid growth which has characterized the Company in recent years was amply maintained in 1917. The year was, in fact, one of the best in the Company's history. A few of the more prominent features are as follows :—

TOTAL ASSETS	$1,538,840.77	Increase	$180,253.44
TOTAL ASSURANCES IN FORCE	7,626,684.00	Increase	1,232,600.00
NEW ASSURANCES ISSUED	2,237,500.00	Increase	544,000.00
TOTAL CASH INCOME	335,998.70	Increase	45,701.76
RESERVES FOR POLICYHOLDERS	1,040,215.33	Increase	120,324.38
GROSS SURPLUS EARNED	167,399.59	Increase	35,856 51

THE SOVEREIGN LIFE IN 1917—

MAINTAINED AN INTEREST RATE ON INVESTED ASSETS OF 6.63%.

EFFECTED A REDUCTION IN ITS EXPENSE RATE OF ABOUT 17%.

VOLUNTARILY INCREASED CERTAIN SPECIAL RESERVE FUNDS (AGAINST POSSIBLE INVESTMENT LOSSES, Etc.) to $78,500.00.

HAD AT DECEMBER 31st A TOTAL INVESTMENT IN WAR BONDS OF THE DOMINION OF CANADA OR GREAT BRITAIN OF $343,895.85.

BALANCE SHEET, December 31st, 1917

ASSETS

Bonds, debentures and debenture stocks (ledger value)	$ 682,214.84
Stocks owned by the Company (ledger value)	13,400.00
First mortgages on real estate	507,848.34
Value of real estate held by the Company	27,599.33
Loans on policies secured by reserves	217,096.15
Liens on policies under non-forfeiture provisions	12,938.86
Cash in Banks, Head Office and Agencies.	29,302.77
Interest accrued and outstanding	46,831.82
Net outstanding and deferred premiums (with allowance for deduction of 35% of first year premiums and 10% of renewal premiums)	38,929.45
Office furniture (less 10% written off)	2,429.21
Deposits held in trust (see contra)	250.00
	$1,578,840.77

LIABILITIES

Reserve fund on Government standard to cover the Company's entire liability under policy contracts, together with additional reserve voluntarily maintained	$1,040,215.38
Reserve for extra mortality and contingencies	18,500.00
Investment Reserve	60,000.00
Surrenders claimable on cancelled policies.	315.00
Policyholders' dividends due and unpaid	383.23
Reserve for matured instalment policies	6,265.00
Death claims reported, proofs not completed	19,100.65
Premiums and interest paid in advance	6,367.74
License fees and taxes due and accrued	2,684.73
Sundry accounts due and accrued	2,588.38
Deposits held in trust	250.00
Shareholders' account	26,776.07
Instalments due on bonds purchased	40,000.00
Capital paid up	209,995.00
	$1,433,441.18
Surplus to Policyholders and Shareholders above all liabilities	**145,399.59**
	$1,578,840.77

DIRECTORS FOR 1918—

PRESIDENT—R. R. Scott, President the Scott Fruit Company, Winnipeg

FIRST VICE-PRESIDENT—William Grayson, K.C., Moose Jaw, Sask.

SECOND VICE-PRESIDENT—D. E. Williams, Director Traders Trust Company, Winnipeg

DIRECTORS—W. Sanford Evans, Ottawa; E. E. Sharpe, Winnipeg; W. F. Hull, Winnipeg; George N. Jackson, Winnipeg; John Graham Winnipeg; John McClelland, Toronto; R. G. MacDonald, Brandon; Alexander Melville, Winnipeg; H. J. Meiklejohn, M.D., Managing-Director, Winnipeg.

Full Annual Report and Statement Gladly Furnished Upon Request.

DIVIDENDS AND NOTICES

BANK OF MONTREAL

Notice is hereby given that a **Dividend of Two-and-one-Half per Cent.**, upon the paid-up Capital Stock of this Institution has been declared for the current quarter, payable on and after Friday, the **First Day of March** next, to Shareholders of record of 31st January, 1918.

By Order of the Board.
FREDERICK WILLIAMS-TAYLOR,
General Manager.

Montreal, 22nd January, 1918.

THE CANADIAN BANK OF COMMERCE

DIVIDEND No. 124.

Applications for the position of City Auditor will be received by the undersigned up till twelve o'clock noon of Wednesday, the twenty-seventh day of February, 1918. A full statement of qualifications and experience must accompany applications. Applicants will particularly state whether they hold certificates as certified accountants and any municipal experience. An adequate salary will be arranged.

NORMAN H. H. LETT,
City Clerk.

Ottawa, February 5th, 1918.

TOKIO MARINE INSURANCE COMPANY

Messrs. Dale and Company, Limited, the well-known marine and fire underwriters, Montreal, are the provincial agents in British Columbia of the Tokio Marine Insurance Company. Messrs. Dale and Company are not the company's agents for the Dominion as previously stated.

LONDON LIFE INSURANCE COMPANY

One of the many substantial corporations of London, Ontario, which have helped materially to give that city its reputation as a solid financial and business centre, is the London Life Insurance Company. Having done business for 43 years, in that period, the company has built up a strong position. At the end of last year, it had in force business of $50,787,365. Its business during the past five years has been doubled, in the past ten years quadrupled. Mr. John G. Richter, F.A.S., is the manager and secretary. He has conducted the affairs of the company with marked ability and in close co-operation with a helpful directorate headed by the president, Mr. John McClary, and the vice-president, Dr. A. O. Jeffery, K.C. The head office staff are men of experience, Mr. Edward E. Reid, B.A., A.I.A., acting as actuary.

As a result of a progressive policy and proper co-operation between head office and an energetic field force, the company was able to write last year business of $15,703,593, an increase of $2,667,647 over that of the previous year. The gain in business in force was $9,072,048. The net premium and interest receipts of the year were respectively $1,908,100 and $474,524, a total of $2,382,624. The increase over the previous year is $408,844. The payments to policyholders or heirs, for cash profits, surrender values, annuities, matured endowments and death and disability claims, aggregated $646,726, an increase over 1916 of $139,142. The insurance in force on the company's books at the close of the year, after deducting all reinsurances, aggregated $50,787,365, under 25,789 ordinary and 169,296 industrial policies, an increase of 4,838 ordinary and 17,752 industrial policies, for insurance of $9,072,048 for the year. The company's assets, consisting of stocks, bonds and debentures, first mortgages on real estate and other approved securities, amount to $8,050,269, making an increase of $1,074,505 over the previous year. The interest and other payments falling due during the year were generally well met. The liabilities of the company under outstanding policies, and in all other respects, have been provided for in ample manner, the whole amounting to $7,745,043. The surplus on policyholders' account, exclusive of subscribed but uncalled capital, is $305,225. After deducting paid-up capital, the net surplus over all liabilities and capital is $255,225. The company has good reason to be satisfied with the results of the past year.

BASIS AND PRACTICE OF SCHEDULE RATING

Universal Mercantile Schedule Rating—Loss Situation Serious—Methods Used in Canada and United States

"There is nothing that is so much to the forefront in the fire insurance business as the rate," said Mr. John B. Laidlaw, Canadian manager of the Norwich Union Fire Insurance Society in an address before the Vancouver Insurance Institute recently.

"If you are canvassing an insured," he continued, "the first question asked, is as to the rate and if you are offering a risk to the company, the first question they ask is as to the rate, and the difficulty always is to fix a rate which is equally satisfactory to the insured and to the company; for if it is not satisfactory to the insured he will not insure, and if it is not satisfactory to the company they will refuse it, and the problem is to make the rates so just and equitable that they will be acceptable to the public, and at the same time do justice to the companies.

"You will often hear men who are considering the question of rates lament the fact that the companies are not able to show a reason for a rate by statistics relating to the particular class of risk that extend over a period of years, and you will find men who perhaps have not looked into the matter very deeply who think it should be a very simple thing, because all they would have to do would be to ascertain what the losses had been and fix the rate upon that basis. Now that is a very false idea, and one that as insurance men it is wise to combat. The mutual companies do levy an assessment, and their rate is an assessment or in the nature of an assessment based upon past experience, but our rate is a premium which the insured pays in advance, and for which we carry the risk during the term agreed upon.

Accurate Estimate for Success.

"What we have to do with our problem is, in fixing the rate, not so much to look upon what has happened, but to look particularly upon what may happen, and so in practice a mill may be insured at 10 per cent., and it will burn down and be rebuilt and then be insured at 3 per cent. Now that rate is not based on past experience; it is based on the future probability. If a company fixes its rates or guides its affairs solely on past experience, without regard to the present conditions, they will be behind the times continually, and they will never succeed. The secret of success in the insurance business is to so appreciate the hazard and the constant changes that occur as to estimate accurately the probability of loss, and base your rate and your practice thereon. For that reason, often a company that is a non-tariff will succeed, the reason being that the companies through their associations were behind the times. They were fixing their rates too much on past experience, and too little on present conditions; so if the waterworks in Vancouver were to break down or if a number of manufactories, very dangerous manufactories, were to be established in the city it would be no proper guide for you to say, 'well, the loss experienced in Vancouver for the past number of years has been very slight, and you should not increase the rates.' You should deal with the changed conditions. And conversely, if you have had a very bad experience in Vancouver, and have lost a great deal of money in the city, but if the city makes fire breaks and removes hazardous conditions and provides good waterworks and fire appliances you will be justified and warranted in reducing rates. For that reason, the companies or any organization of companies which base their rates solely upon the past experiences will never be able to accomplish what is intended, that is, to fix a rate which will enable the companies to carry the risk during the period of the policy. We promise to carry the risk for one or three years, and our rates should be fixed accurately, so that we will be able to carry the hazard during the term of the policy.

"In formulating the rates and estimating what should be a fair charge, the companies as a whole have gradually developed the present system of schedule rating. There was a time, when fire insurance first started, when uniform rates were charged for all classes of risks, dwellings, stores and factories, without regard to their construction, whether brick or frame, or the difference between furniture or buildings, or whether there were fire appliances or whether there were none; but it was not long before there was a distinction made and going back 100 years you will find very crude schedules being used wherein a distinction was made between brick and frame, dwellings and stores, and stores and factories.

"It was found that although these were varied from time to time, it was necessary to make still greater variation and so about 40 or 50 years ago there grew up the practice in the United States and Canada of having expert rating officers. These were men who had had considerable experience as managers or special agents of companies, who were employed to go from town to town and prepare a book of rates, which was their estimate of the rate which should be charged on each risk. They had nothing to guide them except a sort of intuitive knowledge and their past insurance experience. They would know that a frame building was more likely to burn than a brick, that a carpenter's shop was more hazardous than a machine shop, and upon this they developed a system of rating. In some parts of Canada that system is followed to a greater or less extent to-day. It was found, however, that these men would sometimes get up in the morning with a slight bilious attack, and it would be found that where under exactly similar conditions they had named 1 per cent., they would be naming 1½ on an identical risk on a different day. Then possibly they fell sick and a substitute was obtained to do the work, and he would make a different guess; so the system brought about gross, unfair discrimination between similar risks and it was seen that some sort of a guide had to be formed. Thus was formed the system of schedule rating, based on the opinion of several experienced men that a frame building used as a store should be rated so and so, if it had a shingle roof it should be a little more, if it was used for a carpenter's shop it should be a little more, and from that beginning schedules have been formed which are varying in their structure and more or less intricate, more or less analytical, but all following the general principle of taking into consideration the varying features of each risk, and fixing for each particular feature of the risk a certain definite charge and making up in that way the rate which should be charged. In other words, an analysis of the varying factors that entered into the mind of the original expert rater so he would not be unduly affected by a bilious attack, and a consistent system be established.

Discrimination is Rating Basis.

"In regard to discrimination, our whole modern system of rating is based principally on discrimination, but it is fair discrimination as against unfair. If we rate two risks exactly alike, one at 1 per cent. and the other at 1½, that is unfair discrimination, but if we rate a brick building at 1 per cent. and a frame building badly exposed at 3 per cent., we have made a rate relatively in accordance with the hazard, and that is fair discrimination, and it is necessary that we deal fairly with the public.

"The public are interested in the solvency of fire insurance companies and they are also interested in being fairly treated. The difference between a fire insurance policy and a pound of sugar that may be sold by a merchant is this: that when you go into a store and buy a pound of sugar the party who sells it to you is in no way interested in you, and you are not afterwards interested in him, but when you buy an insurance policy you are interested in the company issuing it and they in you as long as the policy lasts. You have bought the company's credit; that is what you have bought, its promise, which is a contingent promise, and so as a policyholder you are vitally interested in the solvency of the company which sold the contract, and it is therefore in the interest of the public that laws should be passed regulating insurance companies so that they be solvent and able to carry through their promises. The public is interested that the company charge an adequate premium, because if they do not the public may be losers as well as the companies. The public are interested first in seeing that the companies charge an adequate rate, and secondly that they charge a fair rate, that is discriminate fairly between the different risks insured.

(To be Concluded.)

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended February 8th, 1918:—

McKinley-Darragh-Savage Mines, 86,145; Coniagas Mines, 88,000; Aladdin Cobalt Mines, 66,000; La Rose Mine, 103,059; Buffalo Mines, 371,875; Dominion Reduction Company, 176,000. Total, 891,079 pounds, or 445 tons.

The total shipments since January 1st, 1918, now amount to 392,477.8 pounds, or 1,962 tons.

An Outstanding Financial Authority

THE financial pages of THE GLOBE are confidently consulted by financiers, business men and investors. All are agreed that THE GLOBE'S financial comment is dependable and unbiased, and that it is prepared with a full appreciation of a newspaper's responsibility to the public.

THE great world-compassing web of news-gathering services of THE GLOBE make possible financial pages that reflect the true tendencies of the financial and commercial markets. When one realizes the import of THE GLOBE'S exclusive rights to the cable services of The London Times, The London Chronicle, The New York Times and The Philadelphia Ledger, it will be understood why the financial news of THE GLOBE is such an accurate mirror of the situation.

THE financial pages of THE GLOBE carry daily the full quotations and market comment of The New York Times, together with much of its statistical information. The Financial Editors of The London Times, The London Chronicle, The New York Times and The New York Tribune form a coterie of world-acknowledged financial experts, who daily supplement the opinions of THE GLOBE'S own Financial Editor.

THE mining news of Northern Ontario is a daily feature, given without fear or favor.

FULL reports are given of the transactions on Canadian markets. Special correspondents are maintained at all important financial and commercial news centres.

VICTORY BONDHOLDERS SHOULD NOT SELL

It has been reported to the Department of Finance that in some cases investors have been induced to dispose of Victory bonds at extremely low prices. Taking advantage of the fact that many of the 800,000 people who bought these bonds are not accustomed to buying securities, unscrupulous agents have persuaded some who are ignorant of the true situation or are misinformed to sell their bonds at heavy loss. These agents immediately resell the securities at fair prices through the proper channels and pocket the profit.

Victory bonds have as their security the Dominion of Canada, and holders, the officials say, should see that they obtain a fair price. Those who find it necessary to sell should make enquiries from their bankers or a recognized broker, and should not deal with unknown agents.

It is inevitable that from time to time there will be people who desire to turn some or all of their holdings into cash, just as others find themselves in a position where they can add to their purchases of Victory bonds. These buyers and sellers are brought together through the medium of the recognized dealers in securities and there is no reason why at the present time those finding it necessary to sell should not receive a price approximating the cost of their bonds.

It is to be pointed out, however, that while it was a patriotic duty to subscribe to the Victory Loan, it is a part of that duty to hold the bonds, unless it is imperatively necessary to sell. It is not merely the subscribing, it is the actual lending of the money for the period of the loan that helps our war finance.

ONE THOUSAND FORD TRACTORS PURCHASED

The Dominion government has purchased 1,000 Ford tractors at cost. They will be sold to Canadian farmers also at cost, plus freight. Details of freight costs have not yet been worked out, but it is estimated that the average cost to the farmer, including freight, will be about eight hundred dollars. In addition, the government has secured options on another thousand of the Ford tractors.

The Ford tractor has not so far been supplied to any private individual. The Ford factories are now engaged on an order for some thousands of the new tractors for the British government. When that order is completed—probably by the end of March—delivery in Canada will begin.

Purchases were completed for Canada after tests made of the tractor by Hon. C. A. Dunning, of Regina, and J. D. MacGregor, of Winnipeg, representing the minister of agriculture. Both Mr. Dunning and Mr. MacGregor express themselves as fully satisfied with the work of the tractor, and are convinced of its practicability.

The tractor burns either kerosene or gasoline. It is designed as a two-plough machine. A fuel consumption of 2½ gallons of kerosene per acre is regarded as a fair average. It is claimed for the tractor that it can plough an average of eight acres in ten hours. The ploughing speed is given as 2¾ miles per hour.

Conditions of sale will be for cash only. The scheme of distribution still remains to be worked out in detail. In all probability, however, orders will be placed through provincial departments of agriculture.

UNITED STATES TRADE WITH CANADA

Rapid Growth of Business Since 1914—Financial Relations Strengthened

Shortly after William Clarke Teagle who was recently elected president of the Standard Oil Company of New Jersey, was chosen president in 1914 of the Imperial Oil Company of Canada, which then was and still is a subsidiary of the Standard Oil Company of New Jersey, he made up his mind that in order to be well prepared for his new duties he should become familiar with Canada. So says "Holland" in his interesting daily article in the Wall Street Journal, who continues:—

He knew that great empire to the north of the United States somewhat vaguely and was familiar with its boundaries because he had occasion to look at the maps now and then. Yet he felt sure he had no broad, comprehensive knowledge of the Dominion. He therefore made an excursion throughout practically the length and breadth of Canada, at least from Manitoba eastward as far as Quebec. All that he saw and heard caused him to speak upon his return with enthusiasm of Canada and enabled him to look forward to a day when its resources would be magnificently developed and the international trade established between this country and Canada would be very large.

That excursion throughout Canada was made five years ago. Three of those five years Mr. Teagle lived in Toronto from which city he was transferred to the presidency of the Standard Oil Company of New Jersey. He saw something of the wonderful growth of Canada in the three years since 1914 when he was directing the affairs of the Imperial Oil Company. He perceived that the forecast of Canada's growth and of her trade with the United States which he made some years earlier—and which he presumed would not be realized until ten or fifteen, perhaps twenty, years had passed—is now fully justified by the event.

Trade With United States.

Thomas W. Lamont, partner of the house of J. P. Morgan & Company, who has made a careful study of conditions in Canada, set forth in an address to the members of the Canadian Society of New York, in a few impressive figures, the growth of Canada since war began, and especially the magnitude of her increased relations with the United States. As recently as 1910, Canada borrowed in the United States only $3,600,000. That loan was for a special purpose. Presumably it was related to the establishment of Canadian internal improvements. Six years later, Canada approached the United States markets successfully for a loan in the aggregate of $270,000,000, and the average of her loans for each year since the war began has been $183,000,000. That is almost as much as the average yearly borrowing Canada used to secure in London before the war began.

Financial Relations With Canada.

There was a curious change (itself one of the remarkable phenomena associated with the early days of the war) from the days in late August and early September, 1914, when the United States sent through the agency of J. P. Morgan & Company $200,000,000 in gold to Ottawa, Canada; and the time a few months later, when substantially all of that gold was returned. In addition, Canada began to borrow heavily. Ottawa, so far as this American gold was concerned, was to all intents and purposes the Bank of England. Great Britain treated that deposit of gold in Ottawa substantially as though it had been deposited in the Bank of England.

Astonishing as these figures that tell of Canada's financial relations with the United States are, Mr. Lamont regarded them as of less importance than the official figures which tells of the United States trade with Canada. There is the great outlook for future development of international trade upon the American hemisphere in which the United States will secure so great a share.

American Trade With Canada.

The United States trade with Canada and with South America should, after the war is ended, increase so greatly as to surpass the aggregate of American trade with all the other nations of the world. Five years before the European war began the United States had established an excellent trade with Canada according to Mr. Lamont. In 1909 the money value of the commodities Canada bought in the United States was $180,000,000 whereas, on the other hand, they bought in the same year Canadian commodities of the money value of $92,000,000. Therefore the trade balance of the United States in that year was about $90,000,000. That balance was presumably liquidated through London. But it is an astonishing jump from the figures of 1909 to those which Mr. Lamont reports for the year 1917. In that year Canada bought United States commodities of the money value of $664,000,000 and the United States bought Canadian commodities of the money value of a little under $300,000,000. Therefore the total of the international trade in which Canada and the United States took part in 1917 was almost exactly $1,000,000,000.

A favorable trade balance for the United States of nearly three hundred and seventy-five million dollars was created by Canadian trade for 1917. This balance, in addition to the loans which Canada secured in America, makes the United States a creditor of Canada for a little under a billion dollars.

Development of Resources.

The entire Dominion of Canada contains a population approximately the same as that of the Metropolitan district of New York. This makes it easier to realize the magnitude of Canadian fiscal and trade operations since the beginning of the war. Great as these are Mr. Lamont, President Teagle of the Standard Oil Company, and others who are qualified to speak, believe that the impulses to vast development of Canadian resources which have been occasioned by her war activities will remain and, in fact, be accelerated after the war is ended.

American capital is already heavily invested in manufacture and industries in Canada and presumably much more will be invested when the war is ended because Canada offers certain advantages for capital investment which cannot be fully matched in the United States. Mr. Lamont regards the increase in mutual confidence, in common respect each for the other nation, and in admiration for the achievements of each since the war began, as possibly one of the most beneficial of the influences which the war has occasioned, concludes the writer.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

THE STORY OF A YOUNG FINANCIAL MAN'S SUCCESS.—A financial man, thirty-three years of age, came to our office four years ago to take up a new line of business—a line against which he had been prejudiced, but which he knew carried great rewards for the successful. His average commissions this year will be over $5,000.00, and he has built up a future income of over $3,000.00 a year on business already written. We are enlarging our organization to prepare for an enormous expansion of business during the next few years. We have positions for two good men with successful records. This offer will be open during the next week. Only applicants of unquestioned integrity and with the highest references will be considered. W. A. Peace, Manager Toronto Branch, Imperial Life Assurance Company, 20 Victoria Street, Toronto.

WANTED.—Casualty and Bond man with technical experience required by Western Canada general insurance agency to take charge of their Casualty, Bond and Miscellaneous Insurance Department, which is well established and has a large premium income. Canvassing experience and ability not essential, but knowledge of how to handle business offered and give service to present clients is essential. Present manager leaving for family reasons. Answers, Box 145, *The Monetary Times*, Toronto.

WANTED.—Inspector to represent large Tariff Company in Eastern Canada. Answer in own handwriting, stating experience and salary expected. Only thoroughly competent men need apply to Alpha, care of *The Monetary Times*, Toronto.

PUBLICATIONS RECEIVED

Finance.—Statement of the public accounts of the pro- ce of Quebec.

Income Tax.—"The Income War Tax Act of 1917 of the minion of Canada and Some Comment Thereon." Issued the Bank of Hamilton, Hamilton, Ont.

Finance.—"Canada's War Loans," pamphlet issued by E. Ames and Company, Union Bank Building, Toronto, tains interesting information regarding Canadian war ns.

Japan.—What his reviewers call a "fervent loyalty" to the ited States (the land of his adoption) leads Mr. Kawakami this investigation of her friendship for Japan. He shows v this began and how it has been impaired. As an in- med internationalist, believing in fair play, he patiently es up the alleged causes for disagreement. He then ex- ines the reasons leading toward a restored and developed eement between the two nations. He speaks with au- rity, and, whatever views the reader has on Anglo-Japanese l American-Japanese topics, the book will prove of great erest

"Japan in World Politics." By K. K. Kawakami. Pub- hed by the Macmillan Company of Canada, St. Martin's use, Bond Street, Toronto. Price, $1.50.

Trade.—"Conservation of Canadian Trade". By Hon. ederic Nicholls, care of Canadian General Electric Com- ny, Toronto. In his foreword Senator Nicholls says:—

"The uncertainty regarding trade conditions after the war presently giving cause for grave anxiety to business men oughout Canada.

"The balance of trade is now greatly in our favor and nada is prosperous; in fact, so prosperous that little heed being given to preparation for the inevitable "slump" that l be experienced when the demand for our output diminishes d present high prices are no longer current.

"Undoubtedly much could be accomplished by the mobili- ion of our resources, intelligent co-operation in producing and selling, and courageous effort on the part of the government, which is well advised as to the problems to be met.

"In time of war we should prepare for peace, and it will be unfitting to our dignity as a patriotic and resourceful Dominion if prompt and decisive preparations are not made to meet the new conditions which we will soon be called upon to face"

"MUTUAL" PROTECTION AGAINST DISABILITY AND DEATH

Many Policyholders fear that a time will come when, owing to permanent disability from illness or accident, they will be disqualified from earning an income and paying their premiums. The Mutual Life of Canada issues a Policy which not only waives further payment of premiums but provides a monthly income of $10.00 per thousand of insurance, should such a condition develop and be clearly proven. This is a Policy which affords protection to the full amount of the policy at death for the beneficiary and protection for the assured while helpless—Write for full particulars.

One of the most perfect Insurance Policies issued.

The Mutual Life Assurance Co. of Canada
Waterloo Ontario

THE UNAVOIDABLE "IF"

If a man were certain of living a specified time—IF he could foresee the future—perhaps he could do without Life Insurance. But the elements of uncertainty enters, and makes the best schemes of no account. It is this uncertainty that makes Life Insurance so invaluable. A Life Policy is the one certain way of providing for an uncertain future.

The Great-West Life Policies embody all the essentials of profitable Life Insurance. Low premium rates are charged—these premiums may be paid annually or otherwise, as suits the insured—the Policy conditions are liberal and clearly expressed, and the profit returns to Policyholders are so satisfactory that seldom does a participant fail to express both gratification and surprise at returns under his Policy.

Full particulars of suitable Policies will be mailed to any applicant.

The Western Life Assurance Company

SIXTH ANNUAL REPORT

Your Directors have pleasure in submitting to the Shareholders and Policyholders their report of the Company's business for 1917.

ASSURANCES—New Policies were issued and revived amounting to $1,054,750.00, so that the total insurance in force now stands at $2,091,899.00, an increase of $495,430.00 over 1916, or 31%.

INCOME—The gross cash revenue from Premiums and Interest amounted to $78,058.46, an increase of $26,195.89 over 1916, or 50½%.

ASSETS—The Assets of the Company have now reached the total of $257,395.31. The increase in admitted assets over 1916 was $86,792.66, or over 81%.

SURPLUS—The Assets exceed the total Liabilities to Policyholders by $134,445.34.

POLICY RESERVES—The Reserves held for the security of Policies in force computed on the Om. (5) Table of Mortality, with interest at three and one-half per cent., being in accordance with the Dominion Insurance Act, now amount to the sum of $110,917.00, an increase of $20,815.00 over 1916, or 23%,

DEATH LOSSES—During the year Death Claims paid amounted to $8,309.20, of which $5,250.00 was the result of the War; $3,059.20 only being due to natural causes.

SECURITY FOR POLICYHOLDERS—The Security for our Policyholders, including Policy Reserves, Net Surplus and Capital Stock, has now reached the total of $1,108,552.34, an increase of $69,247.15 over 1916, or 6.6%.

A. E. MAY,
President,

ADAM REID.
Managing Director.

Surplus to Policyholders under Dominion Government Standard, including Paid Capital $95,464.52	70,203.17
	$193,153.14

AUDITORS' CERTIFICATE

The audit of the Company's Books, which has been carried on continuously throughout the year, has been completed to December 31st, 1917.

The various securities representing the Company's Loans and Investments have been examined and the Cash and Bank Balances verified.

I certify that satisfactory vouchers have been produced for the various entries in the books, which I believe to be correct.

The accompanying statement of Receipts and Disbursements and of Assets and Liabilities I believe to fairly set forth the position of the Company's affairs at the close of the year.

The Reserves are vouched for by the Dominion Insurance Department.

(Signed) CHARLES D. CORBOULD, C.A.,
Auditor.

Winnipeg, January 28th, 1918.

SIMPLICITY FIRST

is about as important in your life assurance as "Safety First," because a contract that is not simple to understand may not be safe for your particular purpose.

The life assurance policy of the future must be an attractive and exactly worded contract, but above all CLEAR and SIMPLE — the new policy standard as set by

The Sovereign Life Assurance Co. of Winnipeg

QUEBEC CROPS' VALUE, $150,000,000

The Quebec Bureau of Statistics has published an estimate for the year of the yield, quality and value of the principal cereal crops for the season of 1917. These figures are the definite complement of the agricultural statistics collected last spring by the heads of the rural schools who have served as medium between the farmers and the Provincial Bureau of Statistics.

The total yield of wheat was 3,883,600 bushels, against 960,000 the previous year; oats, 32,466,200 bushels, against 24,411,000 in 1916; barley, 3,063,600 bushels, against 1,456,000 the previous year. The average yield per acre of these cereals was as follows in 1917: Wheat, 14 bushels; oats, 21.75 bushels; barley, 18.50 bushels; rye, 16.75 bushels. The total yield of the other cereals in 1917 was the following: Rye, 376,000 bushels; peas, 797,500 bushels; beans, 827,400 bushels; buckwheat, 2,699,000 bushels; mixed grain, 2,609,900 bushels; flax, 47,000 bushels; Indian corn, 1,802,700 bushels.

The quality of the cereals in 1917, according to the average weight per bushel, is shown in the following figures: Spring wheat, 57.96 pounds per bushel; oats, 34.34; barley, 48.14; rye, 53.36; peas, 59.75; beans, 59.90; buckwheat, 46.55; mixed grain, 44.50; flax, 53.21; Indian corn, 56.89.

The following prices are much higher than those of the previous years. They have been established from the reports of the correspondents of the different municipalities of the province. Thus, the average price per bushel of wheat is $2.46; oats, 92 cents; barley, $1.58; rye, $1.78; peas, $4.51; beans, $7.77; buckwheat, $1.78; mixed grain, $1.33; flax, $3.37; Indian corn, $2.25.

With the preceding statistics and the knowledge of the area seeded last spring it is easy to establish the total value of the different crops. The crop of wheat is worth $9,553,700; oats, $29,868.900; barley, $4,840,500; rye, $669,300; peas, $3,596,700; beans, $6,428,900; buckwheat, $4,669,300; mixed grain, $3,471,200; flax, $158,400; Indian corn, $4,057,000, which makes a total of $153,197,900, against a value of $102,037,000 for the year 1916. The great difference in these figures is not the result only of the increase in prices, but also of the more complete information that it was possible to gather with the provincial organization of a bureau of statistics, on the colossal effort of the farmer to extend his crops, following the pressing appeal made to him in this respect last spring.

WORLD'S GOLD OUTPUT

The world's gold production in 1917 was valued at $428,380,988, as compared with $456,593,695 in 1916, and $470,329,527 in 1915, the largest ever recorded. This year's production is the smallest since 1907. Notwithstanding the recent decline in the African output, this newest field of any great importance is the only one that has made any noteworthy progress in the mining of gold during the last decade. While between 1906 and 1917 the total production of the world advanced 1,352,307 fine ounces, the gain in Africa alone was 3,713,315 fine ounces, indicating that elsewhere collectively there was a decline of 2,361,008 fine ounces, the retrogression in Australasia being almost wholly responsible for it.

The production by ounces for the past two years follows:—

	1917.	1916.
Australia	1,750,000	1,954,774
Africa	10,315,000	10,713,101
United States	4,085,589	4,479,057
Canada	822,376	930,492
Russia	1,000,000	1,253,362
Mexico	360.000	372,038
All others	2,390,000	2,384,033
Total	20,722,965	22,087,757

The Western Life Assurance Company, Winnipeg, has purchased $30,000 bonds of the Greater Winnipeg Water District.

NEW INCORPORATIONS

Large Brick and Coal Companies Incorporated, With Headquarters at Montreal

The largest companies incorporated during the past week were: The H. J. Daly Company, Limited, Toronto, Ontario, $1,000,000; the Shale Brick Company of Canada, Limited, Montreal, Que., $1,600,000; Century Coal and Coke Company, Limited, Montreal, Que., $1,500,000.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are provisional directors:—

Alderson, Alta.—N. E. Stuart and Company, Limited, $49,000.

Lindsay, Ont.—Lindsay Coal Company, Limited, $30,000; T. H. Stinson, J. E. Anderson, A. M. Fulton.

St. Catharines, Ont.—Chaplin Realty Company, Limited, $10,000; J. S. Lovell, W. Bain, R. Gowans.

Kitchener, Ont.—Port Elgin Fish Company, Limited, $40,000; H. J. Martin, T. N. Poole, E. H. Austin.

Collingwood, Ont.—Ferguson and Wheatley, Limited, $40,000; G. H. Ferguson, W. Wheatley, M. E. Ferguson.

Kemptville, Ont.—The McMaster Lumber Company, Limited, $45,000; R. D. McMaster, J. McMaster, M. F. Earle.

Luton, Ont.—The Luton Farmers Co-Operative Club, Limited, $3,000; A. Miller, O. L. Westover, M. McKnight.

Maisonneuve, Que.—La Compagnie Franco-Canadienne d'Immeubles, Limitée, $20,000; A. Geoffrion, R. T. Bergeron, J. C. Mars.

Calgary, Alta.—Central Creameries, Limited, $400,000. Crystal Dairy, Limited, $300,000. Union Milk Company, Limited, $300,000.

Lethbridge, Alta.—The O. T. Lathrop Land Company, Limited, $20,000. Big Bend-Alberta Land and Cattle Company, Limited, $200,000.

Vancouver, B.C.—Quatsino Timber Company, Limited, $10,000. Modern Clothes Company, Limited, $10,000. Adels-Ripley Sales Company, Limited, $9,000. Alaska and British Columbia Fisheries, Limited, $100,000.

Edmonton, Alta.—Sample Shoe Store, Limited, $20.000. Fertile Belt Land Company, Limited, $20,000. Northern Alberta Farmers' Milling Company, Limited, $100,000. National Coal Mines, Limited, $200,000. Provincial News Company, Limited, $20,000.

Winnipeg, Man.—The Kiwanis Club of Winnipeg, Limited, $5,000; J. T. LePage, A. McDougall, E. G. Bricker. Mitchell and Company, Limited, $40,000; E. B. Mitchell, N. Wolfe, D. M. Copp. International Grain and Live Stock Company, Limited, $500,000.

Toronto, Ont.—Canadian Remedy Company, Limited, $30,000; A. B. McClure, A. G. McKnight, R. J. Alexander. Cobalt Smelting and Mining Company, Limited (no personal liability), $40,000; W. A. Henderson, W. J. Thompson, N. W. Robertson. Color Craft, Limited, $40,000; A. W. Briggs, E. M. Dillon, R. T. Birks. The H. J. Daly Company, Limited, $1,000,000; R. H. Parmenter, Arthur J. Thomson, W. S. Morlock. George R. Fuller, Limited, $40,000; G. R. Fuller, C. A. Fuller, M. E. Lawrence. Ontario Oakoal Company, Limited, $125,000; J. A. Armstrong, K. E. Potts, W. R. Jackson. M. B. Overlay Company, Limited, $40,000; W. C. Baker, W. J. Whittard, J. Miln. Union Garage Motors, Limited, $40,000; D. I. Grant, M. MacDonald, E. Smily.

Montreal, Que.—American Waist and Dress Company, Limited, $20,000; S. Eliasoph, N. Solomon, J. Macnaughton. J. H. Lavallee, Limitée, $10.000; J. H. Lavallee, Y. Lefebvre, P. Jobin. Bonsecours Butchers, Limited, $20.000; L. Millman, A. Millman, M. Getz. Chambre Commerciale des Cultivateurs, Limitée, $99,000; P. Morel, C. J. Charbonneau, J. S. Pilon. Elite Cloak and Skirt Company, Limited, $20,000; M. L. Millman, J. Kibrick, A. Millman. Parc Lafayette, Limitée, $90,000; J. Pharand, O. Dansereau, A. Chatelain Club Social des Marchands, Limitée, $20,000; N. Ranger, G Pigeon, R. Pigeon. Century Coal and Coke Company, Limited, $1,500,000; W. K. McKeown, L. C. Herdman, G. E. Chart The McNeil Lumber Company, Limited, $40,000; F. Callaghan, F. X. Biron, A. Tracey. William Brodie, Limited, $100,000; A. G. Claxton, A. E. Harvey, C. S. Mitchell. The Shale Brick Company of Canada, Limited, $1,600,000; E. Languedoc, C. Sinclair, J. P. Charbonneau.

Big Steel Merger is on the Way

Dominion Steel Corporation and Nova Scotia Steel and Coal Company are Discussing Amalgamation Proposals—No Official Announcements Have Been Made—Review of the Companies' Position—The Outlook for Our Iron and Steel Industry.

To those who have closely followed the careers of the Nova Scotia Steel and Coal Company, Limited, and the Dominion Steel Corporation the proposed merging of these two concerns was anticipated. It remained merely to convince the shareholders of the respective companies that their interests would be better served by joint management and to find some satisfactory basis of exchange of stock. It is understood that tentative efforts have been made in the past to merge the two companies, but no satisfactory progress was attained until they came under their present management. It is said by those who are in close touch with the situation that Mr. Frank H. Crockard, the new president and general manager of Scotia, and Mr. Donald H. McDougall, the general manager of the Dominion Steel Corporation, are the men who have convinced the financial interests behind the companies of the advisability of a merger. Mr. McDougall, who was formerly general manager of the Dominion Coal Company, is one of the leading mining engineers on this continent, and few men have a better knowledge of the mining and metallurgical conditions under which the companies have been operating, especially in regard to the coal properties.

Mr. Crockard, who surrendered the vice-presidency of the Tennessee Coal and Iron Company a few months ago in order to take charge of Scotia's destiny, is said to have realized at once the strong position in which such a merger would place the companies. There are, no doubt, many extensions and improvements which Mr. Crockard would like to make in the Scotia plant, and it is understood that the Dominion Company was considering, before the war, the expenditure of a large sum of money for new construction and equipment. While neither concern is disposed to sacrifice output during the war by undertaking any work of remodelling plants, there is little doubt that immediately after the war both plants will be considerably enlarged and rearranged. The logical time for merging the two companies' interests is before such a programme of reconstruction is commenced. It was therefore expected that these companies would eventually merge, but just what causes have led to the merger nearing consummation at the present time is not known. Mr. Crockard and Mr. McDougall will no doubt be at the head of the merged companies, as Mr. Crockard's experience as an iron and steel maker and metallurgist is surpassed by few, if any, on this continent

Export trade will be an important factor in the success of these companies after the war. With Mr. Crockard and Mr. McDougall working together rather than competing and with the interests and resources of Scotia and Dominion combined the new company would unquestionably be able to place their plants in a better condition to compete with foreign concerns. The proposed large plant of the United States Steel Corporation at Ojibway may have been a decisive factor in the decision of Scotia and the Dominion companies to combine for self-protection, as both our maritime province steel concerns, in the opinion of many, will experience keen competition from the Ojibway plant.

The Scotia and the Dominion companies have considerable resources in iron ore and metallurgical coal. It is known that the policy of the two companies has become much more progressive of late and that the directors of the properties desire to convert their natural resources into all shapes for which there is a good demand. As this will entail the building of larger plate mills and the installation of mills for rolling all kinds of structural shapes, such as are at present imported from the United States, including beams, channels, angles, piling, etc., such a programme, if individually and competitively carried out by the two companies, would involve unnecessary duplication of expenditure and effort. The ore and coal resources of Scotia are so intermixed, and the two companies in many ways so complement each other, that a merger of the concerns has been anticipated as the most logical and probable event. It will probably have the support and concurrence of financial and other interests in Canada, resulting as it will in stronger and more efficient operation of these large Canadian properties and enabling them to compete to better advantage in the world's markets. One of the chief conditions of the merger, so far as the Canadian people are concerned, is that the control of the company shall remain in the Dominion and the British Empire.

That the companies will amalgamate is now generally accepted as a fact. On previous occasions when *The Monetary Times* put the question to the heads and directors of these enterprises, the reply was that a merger was not contemplated. To-day when similar questions are asked, there is no attempt to deny that negotiations are in progress. Answering a query of *The Monetary Times* this week, Mr. Frank H. Crockard, the capable and progressive general manager of Scotia, regretted that "at this time" he is "unable to give any authentic statement."

A somewhat similar statement comes from Mr. Mark Workman, president of the Dominion Steel Corporation. In a statement to *The Monetary Times* on Monday, Mr. Workman said that so far there is no information he could give regarding the suggested amalgamation other than that which has already appeared in the press. It will be recalled that he had previously stated that the merger of the two concerns will "be a matter of weeks and not months." He has also indicated that in the event of an amalgamation, the Dominion Steel Corporation will be the controlling factor, for one reason because it would dispose of the objection raised that United States interests might obtain control of the two companies. According to Mr. Workman, Canadian interests will be supreme. Mr. Workman referred to the desire of the Dominion government that the erection of mills for the manufacture of ship plates should be undertaken by one of the steel companies in Canada. He intimated that the action that might be taken by the two companies would therefore be a matter of concern to the Dominion government. The development programme of the Dominion Steel Corporation in the way of blast and open-hearth furnaces he estimated at from $10,000,000 to $12,000,000. For the present, at all events, he declared, his company had no plan or intention of erecting a shipbuilding plant.

The Dominion Steel Corporation's capital is $7,000,000 preferred, and $32,097,700 common stock. The common stock capital of the Nova Scotia Steel and Coal Company is $15,000,000, and $1,000,000 preferred, so that the total common stock capital of the merged companies would be $47,000,000, and the preferred about $8,000,000. Against this capital the two companies had at the end of 1916 excess current assets over liabilities of about $16,000,000. This amount will be further enlarged as the result of operations for 1917. In 1914, the excess of current assets over current liabilities of the Dominion Steel Corporation amounted to 4.7 per cent. on the entire capitalization. In 1917 this had increased to 18.95 per cent. For the same periods, the Nova Scotia Steel and Coal Company, in 1914, had excess current assets equal to 1 per cent. on the total capital, against 12.47 per cent. in 1916.

The current cash position of the two companies is shown in the following table:—

	Dominion Steel Corporation.	Nova Scotia Steel & Coal Company.
Total stock and bonds outstanding	$69,265,066	$18,287,196
Current assets	15,446,396	5,725,287
Current liabilities	2,315,238	3,443,558
Excess current assets over liabilities	13,131,158	2,281,729
Percentage surplus assets to total capital	18.95	12.47

Dominion Steel figures are for year ended March 31st, 1917. Scotia Steel figures are for year ended December 31st, 1916.

Some new financing will probably be required to complete the plans of the merger, but it will not likely be considerable in amount. The cash holdings of the two companies combined would provide a nucleus for an extensive programme of extensions and improvements and would be supplemented out of earnings as the work progressed.

If the amalgamation goes through, it will be on the basis of the present capitalization of the companies, without watered stock.

The general opinion is that the companies will merge on a share-for-share basis. There is, however, discussion of a cash bonus for the Scotia shareholders. This is mentioned at $10 a share or a total payment of $1,500,000. Little has been heard from the shareholders on this matter or indeed on any phase of the amalgamation proposals, as the subject has not been officially brought to their attention as yet. Mr. L. G. Beaubien, who owns and controls a very large block of stock of the Dominion Steel Corporation, has stated that while he was personally in favor of an amalgamation, as in the best interests of the Dominion Steel Corporation, he would like to know more of what was being done. "I would like to be given a chance to pass judgment before a decision is reached by the board. As the largest shareholders, we haven't been consulted in the negotiations that are going on, and we ought to have some say. We are thinking of writing a letter to some of the shareholders and friends explaining the whole matter."

Mr. Mark Workman, president of the Dominion Steel Corporation, and Mr. N. B. McKelvie, a director of the Nova Scotia Steel and Coal Company, have been in conference on several occasions during the past few weeks. Mr. McKelvie was chiefly responsible for the interest of American capital in the Nova Scotia Company. Mr. W. D. Ross has been the company's chief financial adviser.

Messrs. Hayden, Stone and Company, of New York, the brokerage firm which is understood to be interested in the suggested merger, has written the following letter to the press: "There has been considerable publicity regarding the proposed merger of Dominion Steel Corporation and the Nova Scotia Steel and Coal Company, and such merger would bring under one ownership raw material in the shape of iron ore and coal that would compare favorably with the ownership of such materials by any other company on this continent, and from the point of view of the British Empire would represent one of its great assets.

"To say that we are back of such a merger is hardly correct; but we do feel that an operation of the coal and iron ore deposits under one ownership instead of by any man-made division would result in economies, both from the point of operation and by avoiding the necessity of duplication of plant, that would be of the greatest benefit to the security-holders of both companies.

"However, if the talked-of merger is not consummated it will not in any way interfere with present plans of the Nova Scotia Steel and Coal Company, as the property has enormous supplies of raw materials, and we feel that the company has in Mr. Frank H. Crockard one of the ablest steel men on this continent to direct its development and operations, and there would not be any reason to delay proceedings with a plant commensurate with the company's supplies of raw material."

As to the selection of the management of the amalgamated concerns, it is stated, unofficially, that under certain circumstances Mr. Mark Workman, president of the Dominion Steel Corporation, would continue to give the company the benefit of his business experience, probably as chairman of the board of directors, while a technical man would fill the position of president and active head of the amalgamated company. There is precedent for such an arrangement, for when the United States interests took over control of Nova Scotia Steel, one of the most expert steel men in the United States was selected to fill the presidency, namely, Mr. F. H. Crockard, who is understood to receive a salary of $100,000 a year, in addition to a bonus on production.

INCREASED CANADIAN STEEL PRODUCTION

It is a Factor Considered by the Industry in the United States—Preparing for Peace

In a recent issue of The Wall Street Journal is contained a quotation from a business man of excellent judgment, who says that those in the United States reckoning upon a large sale of steel and iron products to Great Britain and to other European countries after the war is ended are in error. For it is asserted that Great Britain, Canada and Germany have greatly enlarged their steel-producing capacity; they have, in addition learned economy and efficiency. Furthermore, the Wall Street Journal says that the prevailing opinion that after the war is ended we shall be found leading the world in our exports of steel and iron products, is not taken seriously by steel men, who have watched the development of the steel industry since the beginning of the war.

Will not Buy Heavily.

One of the reasons given by the authority which the newspaper quotes for his belief that European countries will not buy heavily of steel and iron from the United States after the war, is to be found in the fact that these countries will then be debtor nations, possibly by as much as $100,000,000,000. They certainly will owe the United States many billions—in fact they do now. Therefore, they will not be disposed to increase their indebtedness by making heavy purchases of steel and iron in the United States. Instead of that the manufacturers will strain themselves to the utmost to command the greater part of the steel and iron trade of the world. For in that way they will be able to secure some part of the funds by which they may meet their obligations. They will make a great drive against the United States; they will attempt successfully to compete in our own markets with American iron and steel manufacturers They will rely to some extent for success upon high cost of production of steel and iron in the United States, due chiefly to the wages and salaries which are paid to the artisans.

Discussing these statements, "Holland," in an article in the Wall Street Journal, says that undoubtedly the view set forth by this authority is the one taken by the leaders of the steel and iron industry, yet with a mental reservation. These leaders believe that we can hold and increase our world trade in steel and iron products, notwithstanding the high cost of labor, if there be satisfactory legislation, part of it so enacted as to prevent the dumping into the United States of steel and iron products and part of it so enacted as to enable us with facility and at reasonably low cost to approach the markets of the world.

On the office wall of one of the high executive officers of the United States Steel Corporation is conspicuously placed a legend reading as follows: "In time of war, we should prepare for peace." Undoubtedly, the managers of the Steel Corporation and, in fact, the managers of all the independent steel and iron industries of the United States, are now, as far as possible, preparing for conditions which will arise immediately after the war is ended They hope to secure the passage of an act which will enable steel and iron manufacturers who are exporters, to act in co-operation and in combination, so far as foreign markets are concerned. Action of that kind was one of the reasons why Germany was able to secure rapidly a considerable share of the world's trade in the iron and steel products. Then, again, these industrial leaders hope that after the war is ended they will have available a large amount of ships. Lack of shipping facilities was one of the reasons why the iron and steel makers of the United States were not able always to compete with the Germans and the English manufacturers of iron and steel.

Furthermore, it is hoped that legislation, which will modify the existing anti-trust laws, will be enacted. For if, for instance, the United States Steel Corporation should be dissolved through the judgment of the Supreme Court upon the action now pending, then it is inevitable that the United States will lose a large part of her exports of iron and steel products.

France and Belgium.

Apparently the managers of the United States iron and steel industries do not now contemplate entering the markets of Great Britain or of Germany with their products after the war. They do believe that France and Belgium, if Belgium is quickened, will become heavy purchasers of American iron and steel products, provided conditions as well as legislation are favorable They look for great markets in South America and in the Far East, and if they are not handicapped by unfavorable conditions or by stringent legislation they believe that they will be able to meet whatever competition Great Britain or Germany, should Germany try to compete, may offer in the South American and Far Eastern markets. They are not concerned about the high cost of labor, for they believe this is offset by the greater productive capacity of highly-paid labor, by the utilization of the best labor-saving machinery, by the employment of highly competent men of science, and also by our favorable situation with regard to coal and iron deposits.

This is the contingency which the industrial leaders, whose achievements since the war began in iron and steel commodities, have been noteworthy, hold in reserve while they are disposed to admit that Great Britain and the European nations will not only refrain from purchasing American iron and steel, but will also attempt to dump enormous amounts of these commodities into the United States. The British manufacturers may be able to do this unless the United States

WAR TRADE BOARD

The appointment by the Dominion government of a War Trade Board is a commendable step. One of the few criticisms that might reasonably be offered is that the creation of the organization was delayed too long. The personnel of the board combines many qualities and experiences which will be of great value in the important work ahead. The board is representative not only of departmental experience, but also of practical industrial, financial, labor, and executive experience. It might perhaps be strengthened by the addition of engineering and technical authorities.

The powers and duties of the board, which were officially announced in *The Monetary Times* last week, are very wide. The organization will have direction of licenses for export and import. They may supervise when necessary, industrial and commercial enterprises with a view to preventing waste of labor, raw materials, and products. They will make recommendations for the maintenance of the more essential industries and will also investigate the country's stock of raw materials, partly finished and finished products and, when necessary, direct their distribution. In addition, they will co-operate with the Canadian War Mission at Washington which, by the way, might profitably have been appointed many months ago, instead of in the early part of 1918. The board naturally will co-operate with the several departments of the government.

Our War Trade Board has been constituted, as the prime minister has stated, "following very careful consideration of more effective organization for the purpose of the war, and having regard to the necessity of more effective measures for maintenance of industries essential for that purpose."

It is not unlikely that one of the first matters which the Board will consider is the prohibition or taxation of imports which may properly be considered as luxuries. These imports have been the subject of much criticism during the past two years. The next few months may witness their government regulation.

CONTROL OF STEEL MERGER

Discussing the proposed merger of the Nova Scotia Steel and the Dominion Iron and Steel Corporation, The Halifax Herald recently printed an editorial strongly expressing the opinion that such an event would be dangerous to the national interests of Canada and of the Empire because of the greater possibility thus afforded of control of coal and iron ores passing some day into enemy alien hands. The article concluded by calling on the Nova Scotia and the Dominion governments to take preventive action. *The Monetary Times* sees no objection to the suggested amalgamation as such. It would undoubtedly prove the foundation of a great steel industry in Canada which would constitute a valuable factor in our national development and prosperity. The control of that industry should not, however, be allowed to be taken away from British interests. It has been unofficially suggested that there will be no difficulty in regard to this point, since arrangements could be made to form a voting trust with the voting power in the hands of English or Canadian interests. In that connection the name of a prominent Canadian has been mentioned. The interests of the various units of the British Empire are rapidly being brought into closer harmony. The events of war have given an impetus in that direction. The loss by Canada, and the Empire, of the control of any of the big industries or railroads would be an unfortunate check to that movement and our national achievements and ambitions. We feel sure that the directors and shareholders of the companies concerned in the proposed steel merger are of this opinion and that during their negotiations they will act accordingly.

INFORMATION AND THE NATION

One of the most significant of many important statements in the recent address at Orillia, of Mr. S. R. Parsons, president of the Canadian Manufacturers' Association, and printed in *The Monetary Times* last week, was his reference to what he termed the "popular cry." He said: "Is it not possible that the government, in yielding to the popular cry for a curbing of the profits of manufacturing in one particular line, has been unfair and unwise in singling out any industry for its control?" Aside from the specific industry he cites and aside from industrial matters generally, there has been a danger—and it remains—that our government might be stampeded by that same "popular cry" whenever it is loud enough and is backed by a sufficiently large delegation. The popular impression and opinion of current matters of national importance, are frequently correct; sometimes they are quite wrong. The danger is the possibility of the adoption of policies merely because of popular impressions supported by an array of votes depending on the government's decision, and not as a result of an investigation of the facts.

There is little doubt that many government policies have been framed during the past two or three decades, without the possession of sufficient data upon which to base those policies. We will never have a tariff, for example, which will be fair to the manufacturer, to the farmer, to the general consumer, to the countries to which we extend preferences, and so on, until we have a complete analysis of our national position in industry, agriculture, finance, marketing, etc., made by experts, for the benefit of our legislators. It will be a large task to obtain that information but in the meantime we are legislating with the help, comparatively speaking, of scraps of information gathered here and there, with little effort to discover the relation of one scrap to the other. This is not a criticism of our government departments; it is a reminder of a vital weakness in our national conduct.

The business which is operated on such a plan is heading for disaster or at least for a poor position in relation to its competitors. A nation, to succeed in business and to harmonize as far as possible the interests of its people, must have and analyze all possible information as to the units which make up the nation. With that, we will know when the popular cry should be followed, when it should be answered negatively, and most important of all, when it should be anticipated.

VALUE OF STOCK EXCHANGE

The Montreal and Toronto stock exchanges are telling the people of Canada, in a series of public announcements, how they are able to serve investors, who are rapidly increasing in number. While only 40,800 subscribers purchased our third war loan a year ago, no less than 820,000 purchased Victory Bonds. This year, the Canadian people will be required not only to take up another substantial war loan but also to absorb most of the bonds issued in the Dominion. In addition, they will have to finance issues of approximately $65,000,000 which will mature in the United States this year. The value of the Canadian bond houses and banks in our securities business, including war loans, is generally known. The value of the stock exchange, however, is not as widely known, chiefly because its functions are not properly appreciated. As Mr. G. Tower Fergusson pointed out in his interesting article in *The Monetary Times* of January 4th, the success of those at the helm of the world's stock exchanges in safely piloting them through the time of crisis at the outbreak of war, and on several occasions since, is an earnest that during the coming period of reorganization, they will be equally well handled and will prove a valuable factor in the financial upbuilding of the country during the development of the coming years.

The popular impression of the stock exchange is not always complimentary to the institution. The object of the publicity campaign of our stock exchanges is to give the people of this country a better idea of the functions and workings of the exchanges. The latest and most reliable quotations of both listed and unlisted securities can be secured from their members. Not only do the members of our stock exchanges handle stocks and bonds, but they will buy or sell any securities which their clients desire. By dealing with a member of the Canadian stock exchanges, the investor in any class of securities, is assured of proper treatment and good service. The name stock exchange has been misinterpreted by many to mean that the institutions trade only in stocks. This is incorrect, as they are in addition bond exchanges, dealing in government, municipal and corporation bonds as well as other securities. If the story of the Canadian stock exchanges, now being placed before the public, will dispel the unreasonable prejudice which has existed against the exchange as an institution, a valuable national service will have been performed.

MONTREAL CITY AND DISTRICT SAVINGS BANK

In Canadian banking spheres, the Montreal City and District Savings Bank ranks as one of the veterans, having served the public for seventy-one years. Its shareholders are largely residents of Montreal and Quebec cities. Hon. R. Dandurand is president and the head of an influential directorate, which is guiding the affairs of this substantial institution. Mr. Richard Bolton is vice-president, the other directors being such well-known men as Mr. G. N. Moncel, Hon. C. J. Doherty, Hon. Sir Lomer Gouin, Mr. Donald A. Hingston, Mr. Fred W. Molson, Mr. Clarence F. Smith, Hon. Sir Evariste LeBlanc and Mr. H. H. Judah. Mr. A. P. Lesperance is the capable manager of the bank, and he has had a most successful regime. The institution, which has a paid-up capital of $1,200,000 and an exceptionally strong reserve fund of $1,350,000, has its headquarters in Montreal, and serves that city with a large number of branches there. It is represented also in London, England, New York and Paris by responsible foreign agents.

In presenting the annual report of the bank's affairs at the recent annual meeting, Mr. Dandurand was able to report net profits of $222,189. The balance brought forward from last year's profit and loss account was $172,308, making a total of $394,498 for distribution. From this amount were paid four quarterly dividends to the shareholders and $15,000 was contributed to the Canadian Patriotic and Red Cross funds, leaving a good balance at the credit of profit and loss account of $214,023 to be carried forward to next year.

An examination of the assets shows a large amount of cash on hand and in charge of banks, namely, $5,614,346. The Montreal City and District Savings Bank also holds $14,956,589 of city of Montreal and other municipal school bonds and debentures. It has a substantial holding of Dominion and provincial government bonds amounting to $5,635,633. Its call and short loans secured by collaterals total $7,776,754. The confidence reposed in the institution by clients in Quebec province is reflected in the large deposits of the bank, which at the end of the past year amounted to $32,956,769.

BIG STEEL MERGER IS ON THE WAY

(Continued from page 8)

manufacturers are favored by legislation and are aided by such facilities as, for instance, the proposed foreign commerce bank would offer. Given fairly even conditions the American manufacturers believe that they can not only hold the trade they have already secured but can increase it, no matter what competition Great Britain and Germany may offer.

How the Two Steel Plants Compare

Dominion Iron & Steel Company.

Iron furnaces and supplies.	Annual capacity.
6 blast furnaces of 250 G.T. capacity each per day	550,000 G.T. basic and foundry pig iron.
Company owns Wabana Ore Mines, Newfoundland	850,000 tons.
By-product coke plant, consisting of 620 ovens	650,000 N.T. coke.
By-product recovery plant for Benzol, Toluol, Naphtha, Naphthaline and Sulphate of Ammonia	
Plant for manufacture of cement from blast furnace slag	
Limestone quarries in Nova Scotia and Newfoundland	630,000 tons.

Steel works.	Annual capacity.
10 Basic open hearth furnaces (50-ton)	400,000 N.T. (Ingots used only for desiliconizing, dephosphorizing, and decarburizing molten pig iron for open hearth furnaces).
3 Basic Bessemer converters (15-ton)	
35" 2 high reversing blooming mill	
16" Morgan cont. billet mill	375,000 tons blooms, billets and slabs.
Morgan cont. rod mill	90,000 tons wire rods.
Morgan semi-cont. rod and bar mill with 12" roughing and 9½" finishing trains	60,000 bars.
16" Merchant mill	75,000 tons bars.
28" Rail mill	300,000 tons.
Wire department	50,000 tons.
Wire nails	30,000 tons.

Nova Scotia Steel & Coal Company.

Iron furnaces.	Annual capacity.
1 Blast furnace at Sydney Mines of 250 G.T. daily capacity	90,000 G.T. basic and foundry pig iron.
1 New blast furnace under construction	80,000 G.T.
By-product coke plant, consisting of 150 ovens	110,000 N.T. of coke.

Steel works.	Annual capacity.
5 Basic open hearth furnaces at Sydney Mines	50,000 N.T. steel and fluid compressed ingots.
28" Cogging mill	Total 60,000 tons of finished, rolled and forged products, including merchant bars, angle bars, tie plates, etc.
20" Plate mill	
18" and 19" Rolling mills	
9" Guide mill	
Hammer and forging presses	
2 Railway spike machines	7,500 tons.

Mines.	
Ore mines at Wabana, Newfoundland	600,000 tons.
Coal mines at Sydney Mines	800,000 tons.
Limestone quarries in Nova Scotia	70,000 tons.

The Eastern Car Company, a subsidiary concern of the Nova Scotia Steel and Coal Company, manufactures steel and wooden cars, car wheels, etc. It utilizes a considerable portion of the plates and bars made by the Nova Scotia Steel Company, and has important and growing facilities for steel shipbuilding. The Nova Scotia Steel Company operates a number of ocean vessels, which carry its ore and coal to export markets.

The plants of the Dominion Steel Company and the Nova Scotia Steel Company are favorably situated for the utilization of the large iron and coal resources in that territory. A large tonnage of Wabana ore is exported by these companies to Europe and the United States.. These exports comprise about two-thirds of the total ore mined, the balance being used in their own blast furnaces in which pig iron is produced for conversion into basic steel, although this iron contains high percentages of phosphorus, silicon and sulphur. The coal supply also is well suited for coking and steam purposes. The cost of transportation to these plants both of ore from Newfoundland and coal from Cape Breton mines is low, compared with that in other important iron districts.

Both companies export a large proportion of their products, notably, rails, forgings and wire products to the United States, the United Kingdom and other countries, and should be able to expand their plants so as to increase the variety and tonnage of iron and steel products for export; while their low cost of production and shipping facilities should enable them to compete for export trade with producers in the United States or Germany.

WIDER RANGE OF STEEL PRODUCTS

That is One of Needs of Canadian Industry—Review and Outlook

One of the needs of the Canadian steel industry is a wider diversification of its products, according to Lieut.-Col. Thomas Cantley, chairman of the board, Nova Scotia Steel and Coal Company, in a review of the industry published in Industrial Canada, the organ of the Canadian Manufacturers' Association. He points out that at the present time there is an absolute dependence on the United States for certain shapes, large sections and heavy steel plates. This applies both to shipbuilding and structural material. The difficulties in connection with the production of these in Canada are not insuperable. To lay down the necessary plant at the present time, in view of the scarcity of material, high prices and existing labor conditions, would call for an excessive capital expenditure. But Canada's needs in this respect are now imperative, and if the government are prepared to meet existing conditions, the requirements of the Dominion in this connection can be met within a reasonable time.

Col. Cantley states that the production of iron and steel during the past year, 1917, has been attended by ever-increasing difficulties, due largely to shortage of important supplies, scarcity of labor, and delay in transportation. It is, therefore, particular gratifying that the production of steel ingots and direct castings in Canada for the year will approximate nearly 1,700,000 tons, creating a new record, the previous banner year being 1916, when some 1,300,000 tons were produced. He continues:—

The production of pig iron in the Dominion has likewise been relatively heavy, it being estimated that the output will proximate 1,200,000 tons in 1917, as compared with 1,150,000 tons in 1916. Of this total some 13,000 tons of so-called pig iron were produced in electric furnaces at different points throughout Canada.

Role of Electric Furnace.

The electric furnace is playing a much larger part in Canada's steel production than heretofore, and it is probable that 45,000 tons of steel will have been produced by this method in the Dominion in 1917. This shows a quite rapid growth, the output from electric furnaces in 1916 amounting only to some 19,000 tons. The growth of this process has been particularly rapid in the United States and Great Britain. In the latter country 131 furnaces are now operated or under construction; of the total number 70 are in the Sheffield district. This probably makes the largest number of such furnaces in any one group in the world.

The development of this branch of the steel industry is directly due to the unprecedented demand for steel for war purposes. The advocates of this process of manufacture claim that it has many inherent advantages, which, together with

the pressing demand for output, has led them to take advantage of the opportunity.

The production of steel ingots and direct steel castings in Canada for the past four years, 1914 to 1917, inclusive, was as follows:—

	1914. Tons.	1915. Tons.	1916. Tons.	1917. Tons.
Steel ingots	811,567	989,829	1,397,703	1,686,005
Direct steel castings	17,074	31,067	30,546	42,807
Total steel	828,641	1,020,896	1,428,249	1,728,812

The total quantity of electric steel produced for the four years was as follows:—

	1914. Tons.	1915. Tons.	1916. Tons.	1917. Tons.
Electric steel	61	5,625	19,639	39,069

The figures for 1917 may be slightly altered when the December actual figures are obtainable, December outputs being estimates supplied by the operators. The total production of electric steel for 1917 may prove to be about 45,000 tons, the uncertainty as to this being due to inability or failure of the British Forgings, Limited, to report as to their output.

Great Britain's Production.

Great Britain, likewise, has largely increased her steel production. It is difficult to obtain official figures, but in a forecast by the minister of munitions some few months ago, it was stated that whereas the output tonnage of steel prior to 1914 had remained more or less stationary around 7,000,000 tons, it was expected that some 10,000,000 tons would be produced in 1917, and they hoped with the new construction under way, to produce at least 19,000,000 tons in 1918. And if the war continues into the latter part of 1918, it would find the nation with a capacity for steel production 50 per cent. greater than before the war.

In the United States the output of steel ingots will amount to approximately 42,000,000 tons, this being practically the same tonnage as produced in 1916. The output of pig iron, it is estimated, will be somewhat less than in 1916.

The production of coal in Canada during 1917 will probably total 13,000,000 tons, as compared with 14,483,395 tons in 1916, and 13,267,023 tons in 1915. The coal mines have been operated at the highest possible pressure, but under very severe disabilities. Lack of transportation accommodation, difficulty in obtaining supplies, but chiefly acute labor troubles and labor indifference have greatly hampered operations. There has been a good deal of labor unrest, and one wage increase has followed another, with further demands as yet unsettled. The labor shortage, however, was primarily caused by the great number of young, able-bodied, skilled miners who, in the early days of the war, enlisted in the armies of the Empire, and indeed have freely enlisted until about a year ago, when recruiting was discontinued in the colliery districts. Unfortunately, too many of the skilled men have been withdrawn from the mines, men not only skilled, but the bravest, most vigorous, intelligent and all-round men, whom it will take years to duplicate. Naturally the coal output suffered during the past year. Whether the output in 1918 can be materially increased is an open question—it all lies with the men, for with steady work, reasonable hours, and the desire to honestly help in the war, a large increase could be obtained.

As to Coal Situation.

More soft coal—about 50,000,000 tons—was mined in the United States in 1917 than ever before in the country's history—the total output being over 550,000,000. This is an increase of about 10 per cent. But the demand during the year has been abnormal, and the tonnage of bituminous coal mines was entirely inadequate to take care of the current needs, it being estimated that some 50,000,000 additional tons, or say 20 per cent. over normal needs, were required to meet industrial and domestic requirements. One of the most serious disabilities under which the United States coal trade labored was the lack of transportation accommodation, and the car shortage has prevented the operators of bituminous coal from shipping, during the latter part of the year, in the vicinity of thirty million tons.

Perhaps it may be axiomatic to say that the world's actual progress in industrial lines may be measured more or less by its consumption of iron and steel. The growth of this industry in Canada during the past ten years has been phenomenal, this being more particularly true of the past three years. Possibly the raw material resources of the Dominion were never appreciated as they are to-day. Canada has within its borders or within easy access (in Newfoundland), all the essentials such as ore, coal and the necessary fluxes requisite for the manufacture of iron and steel. Her coal fields are located at relatively good distributing points, her ore fields are easy of access and her steel plants, particularly on the eastern seaboard, are excellently situated for both domestic and foreign business. Canada, therefore, with its present steel development as a nucleus, and its great natural resources, should, under wise direction, make important progress in the coming year, provided always that the necessary labor is available, and that labor is content with reasonable hours and wages in keeping with present living conditions.

Ruling Prices Higher.

The prices ruling during the greater part of the year were considerably higher than those prevailing in 1916, Bessemer pig iron, for instance, selling in Pittsburg, in September, 1917, at $48, as compared with $37.25 in November, 1916. Prices quoted during the year for other steel products were proportionately remunerative. In September, 1917, however, the United States government, in conjunction with representatives of the steel trade, materially reduced the prevailing prices, arranging a fixed scale which practically covers all iron and steel products. These prices applied equally to the public, the government and the allies, and were voluntarily acquiesced in the by the steel manufacturers as a whole.

While very high prices have ruled, costs have been on an unprecedented scale. Nevertheless, the industry has enjoyed a year of signal prosperity. This prosperity is shared with the country, as a large part of the earnings return to the government in the form of war taxes, thus bearing its proportionate cost of the war.

The Canadian iron and steel industry, since the outbreak of war, has made a magnificent response to the calls made upon it. Production has been speeded up, old plants enlarged, a very large sum of money has been spent on new equipment, and many labor and transportation difficulties overcome; the results obtained, in view of the obstacles encountered, generally speaking, being most satisfactory.

As to Munitions Industry.

Immediately on the outbreak of war Canada embarked on the manufacture of munitions. That it was possible to undertake this work was due to the satisfactory condition of the iron and steel industry, particularly in Nova Scotia, where the first experimental work was carried on. Shell forgings were produced in the latter months of 1914, since which time, until about mid-summer, 1917, an ever-increasing flow of munitions, from the finished 18-pounder shrapnel to 9.2-in. high explosive shells, have gone forth, which undoubtedly has been of incalculable value to the Empire.

The benefits accruing from the development of the munition business in Canada have been many. Use has been made of the by-products from the coke ovens, and a large quantity of benzol and toluol is being produced. The lead, copper and zinc industries have been put on a strong basis, and it is anticipated that as a result of the stimulus given during the past three years, within the near future Canada, as regards the latter-named metals, will be practically self-supporting.

For the past year the munition business has been erratic. During the spring months, contracts for heavy H.E. shells (both forging and finishing) were cancelled, without, it is claimed, due regard to the contract conditions on which these were based. Friction developed in connection with the inspection, which contractors claimed was due to lack of experience on the part of the local inspectors, to the impractical and highly technical demands of the district inspectors, and the intolerant and high-handed methods of some of the chiefs. Despairing of improvement in method, and failing to obtain redress, a number of munition manufacturers withdrew from the business, and forging presses and finishing plants alike were idle.

Cancellation of Contracts.

At the time when contracts for hundreds of thousands of shells were cancelled, an extensive plant, comprising electric furnace and forging units, was being laid down in Toronto, to compete with existing plants laid down in good faith. These existing plants were developed and put in working condition under abnormal and unheard of difficulties, and their contracts were cancelled before it was possible from the work

then executed to amortize anything like the cost of these plants.

In view of the conditions then prevailing, it became necessary for various manufacturers to again devote their attention to commercial work and find a market for their products. It speaks well for the adaptability of the iron and steel trade that they quickly adjusted the industry to changed conditions, and assisted by the keen demand for steel in the United States, due to the alignment of that nation as an active factor with the Allies, and the insistent demand for railway material in France, very little loss and comparatively no delay resulted. The Scotia Company restarted their plate mill, and have turned out a very considerable tonnage in sheets up to 48 inches wide from one-eighth to three-quarters inch thick. This output has been exceedingly helpful in meeting a demand which at times seemed insatiable.

Within the past few weeks further munition orders have been placed in Canada, and it is rumored that large orders will be given out in the near future.

Some of our people appear to think that under war conditions state control is necessary in Canada as regards many, if not most, forms of the country's activities. Great Britain, of all parts of the Empire, has had most experience with this practical socialism, and Britain is most heartily sick of it. The London Economist expresses the opinion that "the war has done more to make all classes hate the very idea of state socialism than could have been achieved in the past if all the newspapers, books and speeches delivered had been concentrated on this one purpose. It then shows how a committee is much less intelligent collectively than its individual members. It is asserted that experiences in Great Britain with state controlled railroads, ships, coal mines, engineering works, food, drink, and newspapers causes an intense longing for the day when the Defence of the Realm Act will pass out of existence."

Individual Enterprise.

Canadians in general believe that the present and the future of the Dominion and the Empire can best be conserved and advanced by individual liberty, individual initiative and individual enterprise. One of the dangers now confronting the country, and causing discouragement, is the fear that it must deal with inexperenced men acting as controllers of some sort for the government.

The paramount blunder abroad has been the selection of men for places of authority because of their recognized capacity in their own line of activity, but in lines quite apart from and devoid of any experience in or knowledge of the department or work which they have to deal with on behalf of the government. The result in many cases is misdirected energy, unnecessary meddling, unwarranted restrictions, friction, lack of results, and a general bedevilling and paralyzing of effort.

The outlook for a continuation of the present heavy demand for steel during 1918 is promising, and the probabilities are that all the steel plants will be operating at full capacity throughout the year. In the United States the demand for steel runs greatly in excess of the supply, and this condition will likely continue until the war preparations of that nation are completed. The result of this will be that Canada can only import from the United States such steel products as are absolutely necessary for war purposes.

Regarding Shipbuilding Industry.

Canada is slowly developing a shipbuilding industry. During the past year many yards were built and are now turning out vessels of moderate tonnage. Old yards have been enlarged, and while the total steel tonnage produced in the year was small, the energetic action taken will result in considerable new tonnage being floated during the present year.

This industry, properly developed, will be a large consumer of steel. It has been announced that the Union government will take up, at the coming session of parliament, a shipbuilding programme on a broad basis, and lay down a policy for the future which will add greatly to existing steel shipbuilding and engineering capacity. Concurrently, it is reported that orders will be placed for a considerable steel steamship tonnage.

The Dominion has never been in a better position to embark on this enterprise on a large scale, and by making the most of the present opportunity and by wise legislation, Canada can now build up and ensure a permanent shipbuilding industry, which will be of material benefit, not only as an outlet for our industrial population while building, but by ensuring both coasting and overseas transport of Canadian agricultural, fishery and mine products, concludes Colonel Cantley.

DOMINION LIFE ASSURANCE COMPANY

In whatever particular direction one examines the financial statement and report of the Dominion Life Assurance Company for 1917, a strong and satisfactory position is revealed. The assets are large and well placed. There is a substantial net surplus. Interest earnings have been good, and a very satisfactory volume of first-class business was placed on the company's books during the past year. The Dominion Life is among our leading insurance corporations and its officers, directors, shareholders and policyholders may feel well satisfied with its general position and the results of the past year.

The gross assets amount to $4,677,876, made up of cash on hand and funds invested, $4,247,581, interest due and accrued $264,382 and premiums outstanding, etc., $165,911. The liabilities to policyholders amount to $3,614,649, and to the public, including taxes accrued, but not due, loans and other items, $34,115, leaving the gross surplus on policyholders' account of $1,029,111. From this may be deducted the shareholders' account, including paid-up capital of $202,440, and the contingent account of $100,000, leaving net surplus $726,671.

The company's net cash income for the year was $1,000,070, composed of premiums $707,636, interest and rents $290,880 and sundries, $1,554. This is an increase of $129,169. The expenditure was: (1) To policyholders, $324,979; (2) to shareholders, $17,099; (3) for taxes, $11,959; and (4) for general expenses, $248,353. This is a total of $602,392, leaving available for investment $397,678.

The company received during 1917 2,474 applications for assurances amounting to $4,958,403, an increase for the year of $1,003,093, and have issued policies therefor, including revivals and bonus additions amounting to $4,974,170, an increase of $941,283. There was terminated (1) by death $177,847, (2) by maturity and expiry $87,458, (3) by surrender $295,789, (4) by lapse $930,750, (5) by changes, decreases and not taken $517,671, a total of $2,009,515. The net addition to the business in force of the Dominion Life was $2,964,655, being $1,217,685 more than the increase of last year. This is an excellent record. The total business now in force is $22,271,831.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

The following table of investment yields of stocks and bonds has been compiled for *The Monetary Times* by Messrs. Morrow & Jellett, Members. Toronto Stock Exchange, 103 Bay Street Toronto:—

Feb. 20th, 1918.

	Div. Rate	Price about	Yield about
Preferred:

CANADIAN NORTHERN STOCK HELD IN TRUST

Railway Advanced Money to Mackenzie, Mann & Company to Develop Mines

Government counsel Mr. Tilley, K.C., obtained a partial history of the deal from Mr. D. B. Hanna, third vice-president of the Canadian Northern Railway, at the morning session on February 12th, of the arbitration proceedings at Osgoode Hall to determine the value of the Canadian Northern Railway stock. Mr. Hanna explained that the Rosedale Coal Company, owning a coal mine at Drumheller, was purchased by money advanced by the Canadian Northern Railway. The stock thus acquired by Mackenzie and Mann was held in trust by Mr. Hanna and the coal mine was developed to a point of profitable production. Mr. Hanna insisted that if the property had failed to realize the prospects of its promoters the investment loss would have been borne by Mackenzie and Mann. There was, he said, a verbal agreement assuring this, backed by his personal concern for his own reputation. The loss would not have been loaded on to the Canadian Northern Railway. Asked why, when the property had been developed as a profit maker by funds advanced by the Canadian Northern Railway, it was not taken over as an asset by the railway, the witness said that the limitation of the Canadian Northern Railway's charter rights opposed the transaction, but Sir William Meredith and government counsel pointed out that the railway act empowered a railway company to acquire coal lands.

Sums Due Mackenzie and Mann.

The money advanced by the Canadian Northern for the development of the mine, according to Mr. Hanna's explanation, was on account of sums already due from the railway to Mackenzie and Mann for construction work and so on. "There was nothing to be ashamed of," said Mr. Hanna. The Canadian Northern owed the money to Mackenzie and Mann for terminal properties and other roads, for the purchase of which they, Mackenzie and Mann, had had to find funds. "I, acting as trustee for them, paid the money for the development of the mines," he said.

Further examination by government counsel produced evidence that Mackenzie and Mann control other coal deposits, the product of which is vital to the operation of the Canadian Northern system. They held interests in the Vancouver Island mines, the coal from which was used for the operation of the line as far as Tollerton, B.C. At Brazeau, from which mine 1,200 tons a day were obtained for the operation of the divisions of the Canadian Northern Railway west of Brandon, Mackenzie and Mann shared their interests with Belgian and German shareholders. "But for these mines," said Mr. Hanna, "the road would have been at a standstill this winter." Mr. Tilley then proceeded to establish his point that the fuel requirements essential to the operation of the Canadian Northern Railway depended upon supplies from mines privately owned or controlled by Mackenzie and Mann.

As to Land Holdings.

Mr. Hanna was then questioned as to the extent of the land holdings that Mackenzie and Mann had secured because of their intimate relations with the Canadian Northern enterprise. "Mackenzie and Mann had retained 102,000 acres of the 4,102,000 acres earned as subsidies, the balance being turned over to the railway," he said, "and Mackenzie and Mann also had possession of the Canadian Northern Townsites Company." Mr. Hanna could not say how the townsites properties had been acquired or what percentage had been given by municipalities as subsidies for railway services.

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended February 15th, 1918:—

McKinley-Darragh-Savage Mines, 107,893; Dominion Reduction Company, 64,000; Penn Canadian Mines, 52,909; Buffalo Mines, 241,895. Total, 466,697 pounds, or 233 tons.

The total shipments since January 1st, 1918, now amount to 859,174.8 pounds, or 4,295 tons.

BANKS AND VICTORY LOAN

When the Canadian Bankers' Association held its annual meeting last fall, Mr. A. E. Ames, chairman of the Dominion Executive Committee for the Victory Loan, addressed the members of the association. His request was that the banks should earmark a total fund of, say, $100,000,000, which would be available in the form of advances to companies and individuals subscribing for substantial amounts of the Victory Loan to meet the instalments after the initial payment had been made by the company or individual, such advances to be made in cases where there was a reasonable certainty that repayment of the advance out of income or profits would be made within a reasonable time.

Mr. Ames was informed that it was not considered advisable that the banks should unitedly commit themselves to such an undertaking. He was assured, however, that the banks would, individually, within the limits of available funds, sympathetically consider applications of this character.

After Mr. Ames retired there was discussion as to the rate to be charged to borrowers other than the small investor. The question was whether it should be 5½ per cent. or 6 per cent. In the end it was understood that the rate to these borrowers on Victory Loan account should be left to the discretion of the individual bank.

MANUFACTURERS LIFE INSURANCE COMPANY

Many new records were established by the Manufacturers Life Insurance Company as a result of its operations last year. The gain of $9,010,272 in insurance, for example, was the largest in the company's history. The income, which exceeded $5,100,000, also established a new record. The mortality experience was exceptionally favorable, despite claims due to the war, the mortality being more than 25 per cent. below that for which provision was made.

The insurance issued and reinstated last year amounted to $16,485,403, an increase over 1916 of $2,856,190. The report presented at the annual meeting last week shows an increase in premium income of $298,915. The premium income was $3,672,513, and the interest income was $1,436,496. This is a total income of $5,109,000.

After further strengthening the policy reserves, increasing the special reserve to $300,000, and setting aside $357,483 dividends payable to policyholders in 1918, there was a surplus of $2,530,054. Reflecting the conservative method adopted in preparing the balance sheet, it is noted that had the company complied with the Canadian government requirements only, a surplus of $3,670,589 would have been shown, an increase of $226,805 over 1916.

The company last year increased the percentage of its holdings in government bonds. This form of security, first mortgages, policy loans and cash comprises over 93 per cent. of the company's invested assets. The assets total $24,585,000 on the valuation of the Dominion Insurance Department, and the return to the company on this substantial sum was 6.52 per cent., despite heavy investments in Dominion war loans.

The following table shows the percentage invested in each class of security:—

	Per cent.
Government, municipal, rural telephone and school bonds	39.89
First mortgages	35.83
Policy loans	15.38
Cash	2.28
Other bonds, call loans, real estate and other assets	6.62
	100.00

Government bonds, first mortgages, policy loans and cash comprise over 93 per cent. of the company's invested assets.

The Manufacturers Life Insurance Company is one of our strong underwriting corporations. Mr. J. B. McKechnie, the general manager and actuary, combines, in formulating the company's policy, the enterprise and caution which is representative of the two positions. He is supported with a capable head office staff, the majority of whom have had long experience in life insurance, and with this company. A strong directorate is headed by Mr. W. G. Gooderham as president. The company may feel well satisfied with its achievements during the past year.

H. O. POWELL, General Manager

DOMINION FINANCES SATISFACTORY

Sir Thomas White's Budget Statement Will Show Good Results—Increase in Revenue

When Sir Thomas White makes his annual budget speech shortly after the House meets in March, he will be able to present a good financial statement, considering the strain the war has placed upon Canada's resources.

The revenue by the end of the financial year, March 31st, will total around $250,000,000, or an increase over the previous year of some $18,000,000.

Revenue Nearly Doubled.

The revenue of Canada has nearly doubled since the war began. For the first year of the war from all sources it was about $130,000,000. It rose during the second year to $170,000,000. The third year of the war it jumped to $232,000,000. For the ten months of the present fiscal year ended January 31, the revenue was $208,540,755, and at the present rate should touch $250,000,000 by the end of the year.

The economy which has been practised by the government is reflected in the financial statement. For the ten months of the fiscal year the expenditures were $113,457,924 on account of consolidated fund. On capital account outside of the war the expenditure was $21,841,533, or a total of about $125,000,000. In other words, the balance of revenue over expenditure for the ten months was some $83,000,000 and for the twelve months will total $100,000,000.

Canada's Savings.

Canada has saved sufficient during the past year to pay one hundred million dollars of her war expenditure.

The war expenditure for the year, according to the financial statement, was less than anticipated, and is given for the ten months as $188,355,015, or six million dollars less than the year previous for the same period. These figures are, however, perhaps a little misleading as they are the expenditures only in Canada. The Canadian war expenditures in England are being met temporarily by the British government on account of the difficulty of exchange. On the other hand, Canada is paying British bills for provisions, war supplies, etc., in Canada. These accounts will about counterbalance.

Customs Revenue is Largest.

Of the Canadian revenue the customs is still furnishing the largest portion. The customs revenue for the ten months of the fiscal year was $121,764,535, an increase over the same period of about thirteen million dollars.

The revenue was as follows for the ten months ended January 31, 1917, and 1918:—

	1917.	1918.
Customs	$108,868,302	$121,764,535
Excise	20,561,709	21,965,878
Post office	15,881,627	16,550,000
Public works and railways	21,701,730	23,704,225
Miscellaneous	20,890,194	24,556,115
Total	$187,903,565	$208,540,755

The national debt now totals $1,000,000,000, although it is $200,000,000 less than the prediction of Sir Thomas White a year ago.

CONSCRIPTION OF CAPITAL

Financial cables from London reflect some dissatisfaction over further indefinite references by the chancellor of the exchequer on the subject of conscription of capital.

Sir Felix Schuster at the annual meeting of the stockholders of the Union Bank, held recently in London, Eng., said that if capital were nothing more than the helpmeet of the idle rich, he would say take it, but workers should know that capital is essential to industry, new enterprise, employment, better conditions and a higher standard of living for the people.

Regarding the future, he said it will test the powers of the wisest statesmen to devise means of raising money by taxation and at the same time interfere as little as possible with indusrial development. The country must produce more and buy less, he added, advocating taxation on expenditure, especially luxuries.

MUTUALIZATION OF EQUITABLE LIFE

The mutualization plan of the Equitable Life Assurance Society, calling for the purchase from T. Coleman du Pont of 564 shares of capital stock, has been approved by Insurance Superintendent Phillips, of New York State. The project, which received the sanction of the majority of policyholders at a vote taken a few weeks ago, involves the acquisition of 501 shares at $5,400 each, and $1,500 for 63 other shares, the entire purchasing price amounting to $2,779,900. This is to be paid in semi-annual instalments between November 1st, 1917, and May 1st, 1937. Holders of minority shares of capital stock are to be privileged to sell them to the society for $1,500 per share. ,

Superintendent Phillips, in his statement issued on February 6th, approving the mutualization plan, said:—

"There has been no serious objection from any reliable interested person urged against the adoption of the plan, except upon the part of certain minority stockholders, who sought by legal proceedings in the United States court to restrain the society from carrying out and submitting the proposed plan. They alleged that the stockholders, and not the policyholders, were entitled to the 'free surplus' of the society, and, therefore, it had not the legal right to pay one stockholder a greater price for his stock than for the stock of the other shareholders, it being their chief contention that all stockholders must be treated upon an equal basis, and the same price should be paid for all the stock. The United States Circuit Court of Appeals, however, held in substance that all the surplus of the company belonged to the policyholders; that there was no obligation upon the stockholders to sell their stock at the price fixed in the plan, and their rights were in no way violated."

SUPPORTS LOTTERY BONDS

"The problem of floating the forthcoming Liberty Loan would be astonishingly simplified, in my opinion, by the issue of premium-drawing bonds," said Mr. Joseph W. Harriman, president of the Harriman National Bank, in a recent interview.

"There is a universal human instinct that reacts with promptness to the prospect of a prize. Mark the effort of the government to touch this instinct in offering war savings stamps at $4.12 to be repaid at $5. If war savings stamps, why not premium bonds? This underlying principle produced for the Hero Land Bazaar $580,000.

"Assuming an issue of $5,000,000,000 maturing in thirty years, to bear interest at the rate of 3 per cent., $25,000,000, or only one-half of 1 per cent. of the entire issue could be appropriated each year for redeeming at a premium a certain number of the bonds by semi-annual drawing by lot. If the prospect is for the necessity of a rate of 4½ per cent. on the next loan, this plan would effect a saving in the interest rate equal to $50,000,000 annually, or $1,500,000,000 during the life of the issue. There would be a further saving of interest in the semi-annual extinguishment of an appreciable amount of the debt."

Mr. Harriman gave the following schedule of semi-annual drawings of two thousand and one $1,000 bonds, or four thousand and two a year, with the premiums attached suggested, showing interesting results:—

$ 1,000	at a premium drawing $500,000......	$ 1,000,000
10,000	at a premium drawing $100,000......	2,000,000
40,000	at a premium drawing $50,000.......	4,000,000
100,000	at a premium drawing $25,000.......	5,000,000
200,000	at a premium drawing $10,000.......	4,000,000
400,000	at a premium drawing $5,000........	4,000,000
1,250,000	at a premium drawing $2,000........	5,000,000
$2,001,000	Total drawings per year...........	$25,000,000

"I venture the prophecy," Mr. Harriman continued, "that subscriptions to the suggested Premium Drawing Bond issue would be overwhelming. We should promptly make an initial subscription of $5,000,000. We would offer to the public participation in the bonds to which we subscribed, so that the office boy who could subscribe but one dollar would receive 3 per cent. per annum upon his participation, and if the Harriman National Bank's bonds happened to include the $1,000 bond which drew the $500.000 prize, he would receive $500 for his investment of one dollar."

Marriage Settlements

At the time of one's marriage the new responsibilities call for an adjustment of finances. The formation of a Trust, the income from which becomes permanent, unaffected, by any adversity, is a wise provision, protecting wife and family against possible misfortune.

GRAND TRUNK'S SIXTY-SIXTH ANNIVERSARY

Bond and Shareholders Have Always Been Ready to Supply Capital for the Road's Development

The Grand Trunk Railway, the oldest steam transportation system in Canada, is celebrating this year its 66th anniversary. A company which built from La Prairie to St. John's and afterwards passed into the Grand Trunk system was chartered in 1832 and opened its line in 1836. At the latter date there were only 1,100 miles of railroad in the whole of the United States. It was in 1825 that the first real railroad was opened in Great Britain. This beginning of the Grand Trunk was designed to be part of a route between Montreal and New York via Lake Champlain and the Hudson River. In 1845 a company was chartered to build from a point opposite Montreal to the Vermont state line, connecting there with the line of another company chartered in Maine, New Hampshire and Vermont to build from the connecting point to Portland. The purpose was to connect Canada with an all-year port.

Contract with U.S. Roads.

It was from 1850 to 1860 that the principal portion of the main line was laid. It originally had a gauge of five feet six inches. Contact with United States roads at Sarnia and later at Detroit, led to the gradual adoption of their gauge of four feet eight and a half inches as standard for the Grand Trunk and by 1874 all of its lines had been relaid to that width. But so liberally were the original standards of construction laid out that they have remained with little change even under the tremendous increase in weight of equipment during recent years. It is noteworthy that the company's bridge across the St. Lawrence at Montreal, constructed in 1854 to 1859, was provided with a new double-track superstructure of modern bearing capacity in 1898 on the old piers and abutments.

Bond and shareholders of the Grand Trunk have steadily supplied it with the increasing capital demanded by the growth and development of its territory. Throughout its history the company has steadily paid its bond interest and dividends on some classes of its share capital. The ordinary shares have never paid a dividend. The company has received little government assistance and that in the earliest stages of its career. The Royal Commission on Railways last year expressed the judgment that the shareholders had never at any period obtained excessive profits, while the road built up the first Canadian railway system in competition with the railroads of the United States, with their immensely greater resources, and later met the competition of heavily subsidized Canadian roads.

RECEIVER FOR THE CENTRAL RAILWAY

Judgment has been rendered by Sir Walter Cassels, sitting in the exchequer court, Montreal, rejecting the petition of the directors of the Central Railway Company of Canada for confirmation of a scheme of arrangement between that company and its creditors. Immediately following the rejection of the scheme of arrangement an application was made by John W. Cook, K.C., counsel for the City Safe Deposit and Agency Company, Limited, of London, England, who are trustees for the bondholders, asking for the appointment of F. Stuart Williamson, of Montreal, as receiver. This application was made in a suit taken by the trustees, which has been pending for some time. The application was granted and Mr. Williamson was sworn in as receiver in Ottawa on Wednesday of last week.

These judgments are the culmination of various legal proceedings in the exchequer court concerning the affairs of the Central Railway Company, of which Mr. C. N. Armstrong is president, having succeeded to this office upon the death of the late Senator Owens.

The other directors of the railway are Messrs. W. D. Hogg, K.C., E. A. D. Morgan, J. T. Bethune, J. O. Dupuis and J. D. Wells, the latter having also acted as secretary of the company. Apart from certain subsidiary roads, it was intended that the main line of the Central Railway should run from Montreal to Midland, but only twenty miles have been partially constructed. Bonds to the value of more than £427,000 have been issued, these being largely held in England and France. These bonds do not seem to have been highly regarded by the Canadian investing public.

LANDED BANKING AND LOAN COMPANY

One of the outstanding features of the latest annual report of the Landed Banking and Loan Company of Hamilton, is the size of the reserve fund. From the earnings of the past year $55,000 was transferred to the reserve, which brought that account up to $830,000, equal to 83 per cent. of the paid-up capital. Another evidence of strength is the satisfactory condition of the assets, all of which have been examined by a committee of the company's directors. The total assets amount to $3,794,472, of which the greatest part is represented by loans secured by first mortgages on real estate, this item being $3,103,866. The company holds blocks of Dominion war loan, municipal and other bonds and has loans of $52,960 on stocks and bonds. Its head office premises at Hamilton are valued at $65,000. There is a large sum, $268,237 cash on hand and at bankers. The net profits for the past year, after deducting all charges, amounted to $143,710. With the balance of $6,348 brought forward from last year, there was a sum of $150,058 for distribution. Dividends at the rate of 8 per cent per annum accounted for $80,000 of that sum; $55,000 went to the reserve fund and the remainder to various taxes and Patriotic Fund grants, with the exception of $7,232, the balance carried forward. The profit and loss account gives details of management expenses, which we think is a commendable feature of the statement. The expense of the management, including salaries, office expenses, directors' and auditors' fees, were $19,255, a moderate sum. Land inspection, including inspectors' salaries, cost $5,383. Valuators' commissions were $1,221 and debenture expenses $457.

The company's liabilities to the public total $1,917,240, made up as follows: Savings deposits, $1,090,693; currency debentures, $340,936; sterling debentures, $474,986; accrued interest, $8,319; and sundry unpaid accounts, $2,304.

The Landed Banking and Loan Company is one of Ontario's oldest loaning corporations which, as a group, have such an excellent record. Mr. C. W. Cartwright is managing director, his colleagues on the board being Messrs. C. S. Scott, F.C.A., president; Robert Hobson, vice-president; E. H. Ambrose, Charles Mills and Paul J. Myler.

STANDARD TRUSTS COMPANY

A block of $250,000 of the stock of the Standard Trusts Company, of Winnipeg, will shortly be offered to the company's shareholders. In this connection the president, Mr. J. T. Gordon, said at the annual meeting last week: "Of the remaining 5,000 shares of $50 each, each shareholder is to have the right or option to subscribe, in the ratio of his holding, one share to every three held, and that at a premium of 25 per cent., or $12.50 on every $50 share—the same premium that was asked before, five years ago, when the capital was increased from $500,000 to $750,000. Your directors have decided upon this course not only on patriotic grounds, but also for the business reason that the new capital would at once absorb the said company's excellent mortgage investments without disturbance to the Standard Trusts Company, with profit to your company, and with the full approval and knowledge of its client. It is the intention that only the premium and 10 per cent. of the subscription for the new shares will be required at the time of subscription, and thereafter no greater calls than 10 per cent. monthly until the full amount is paid."

The directors presented an excellent report at the annual meeting, held at the company's head office at Winnipeg last week. The profits for the past year totalled $94,171. A balance of $27,158 was carried forward after paying $67,500 dividends and transferring $20,000 to the reserve. The authorized capital is $1,000,000, of which $750,000 has been subscribed and paid up. The other $250,000 is to be offered to the shareholders as noted above. The contingent fund of $25,000, which was established two years ago by the directors in view of the disturbed conditions then prevailing, has now been found unnecessary, and as a result this amount has now been merged into the company's general reserve, which now stands at $500,000.

The directors and shareholders of the Standard Trusts Company have good reason to be satisfied with the results of the year's operations and the sound financial position of the company. Mr. William Harvey, the vice-president, has proved a capable manager. He and his directors, headed by Mr. J. T. Gordon, have combined, in regard to the company's policy, the caution of the East with the progress of the West, with beneficial effect upon the position of the corporation.

The Hamilton Provident and Loan Society

Notice is hereby given that the Forty-sixth General Annual Meeting of the Shareholders of this Society will be held at the Society's Office, in Hamilton, on Monday, Fourth day of March next, at twelve o'clock noon, for the purpose of electing Directors to serve for the ensuing year, and for all other general purposes relating to the management of the Society.

A full statement of the Society's affairs for the year ending December 31st, 1917, will also be submitted to the Meeting.

D. M. CAMERON, Treasurer.

"I appoint as Executor of this my Will— The Canada Trust Company."

"INVESTMENTS"

A MUCH MISUSED TERM

Many who should be, and think they are laying up money for their old age, are misled into so-called "investments," where their hard-earned money is jeopardized, and frequently lost, though it is of the utmost importance to them and to those who may be dependent upon them that its absolute safety should be beyond peradventure.

To those who should invest safely and with caution, not speculate, the bonds of the Canada Permanent Mortgage Corporation can be confidently recommended. This Corporation is most conservative in the investment of the funds entrusted to it. For more than sixty years it has held a leading position among Canada's financial institutions, and its bonds are a LEGAL INVESTMENT FOR TRUST FUNDS. They are issued for one hundred dollars and upwards. Write for full particulars.

WHEAT LOAN OF HUNDRED MILLIONS

It Was for One Year at 6 Per Cent. and Payable Quarterly —History of the Transaction

Some interesting details regarding the Canadian banks and the wheat loan were presented at the annual meeting of the Canadian Bankers' Association held last fall and to which little publicity has been given. The report of the secretary of the association reviewing this matter pointed out that a wheat loan of $100,000,000 for one year, 6 per cent., payable quarterly, with a renewal privilege for another year, had been arranged through the minister of finance with the British treasury. "All the members of the association are aware of the difficulties experienced in properly closing the negotiations," the report says. With the banks scattered from Quebec to Weyburn, dealing with the minister at Ottawa, as the intermediary, who in turn communicated with the British plenipotentiary at Washington and later with London, and with changes in the instalment terms after the provisions of the agreement were first settled, it was not an easy matter for the president of the Canadian Bankers' Association to keep the terms in order from the bankers' standpoint.

"Lord Reading confirmed on November 6th, in a communication to the minister of finance, the authority of the Wheat Export Company, Limited, to receive the proceeds of the loan in the terms following:—

" 'I authorize on behalf of the British government credit arranged with Canadian bankers for purchase of grain to be placed at the disposal of the Wheat Export Commission. Should be glad if you would be so good as to arrange accordingly.'

British Treasury Bills.

"The deputy minister of finance was at once advised that while the name 'Wheat Export Commission' was first used over a year ago, when Messrs. Stoddart and Stewart were representing the British treasury in making purchases of grain, that with the approval of the British authorities a corporation known as 'The Wheat Export Company, Limited,' of which Mr. J. Stewart is president, was subsequently organized for the purpose of buying and shipping the western crop. Mr. Boville, deputy finance minister, undertook to communicate with Lord Reading at once, and ask him to substitute for the Wheat Export Commission in his telegram the name the Wheat Export Company, Limited.

"Lord Reading's authority in view of the course of the negotiations to bind the British treasury in the opinion of counsel to the association is without question. Lord Reading first made the arrangements for the $100,000,000 advance through the minister of finance with the association. Under this arrangement the banks were to have the right to a security in the form of British treasury bills deposited to the order of the minister of finance. When the arrangements with Lord Reading were completed the minister cabled through the High Commissioner to the British treasury outlining the terms and asking that treasury bills as security be deposited for account of the minister with the Bank of England and further asking for authority to deposit the advances in the banks making the advances to the order of the Wheat Export Company, Limited. The deposit of the securities was made by the treasury thus recognizing and confirming Lord Reading's authority in the premises. When Lord Reading has by an amendment of the message authorized a deposit of the advances to the credit of the Wheat Export Company, Limited, the matter, as advised by counsel, can be regarded as satisfactorily settled.

"On November 8th, 1917, the British treasury, by communication through the minister of finance, confirmed the terms of the contract and the authority of the Wheat Export Company, Limited.

Funds in New York.

"In connection with the wheat advances the following letter was by direction of the president written on October 30th, 1917, to J. Stewart, president of the Wheat Export Company, Limited:—

" 'I am directed by the president to suggest to you the expediency of using your credit in New York in conjunction with the $50,000,000 to be placed at your disposal by the Canadian banks on or about the 1st proximo. The president desires me to point out that if the Wheat Export Company uses the $50,000,000 without any drawings from the funds available in New York there will probably be a violent reaction in exchange to be succeeded by a still more violent reaction the other way when you begin to use New York funds exclusively after the $50,000,000 has been exhausted. This I need scarcely point out, will result in a serious loss to your principals as well as otherwise disturbing Canadian financial conditions.

" 'The president would be glad if you would communicate your views on the matter.'

"To which the following reply was received dated November 3rd, 1917:—

" 'Referring to your letter of the 30th of October, in which you refer to the matter of New York exchange, I agree with you, that on certain conditions, your suggestion appears a good one, but before giving any decided opinion, I must necessarily ascertain the financial arrangement at the New York end. As soon as I have that before me, I will again communicate with you.

" 'If at any time there is any information which you require which we can give your association with regard to this credit, we shall be very glad to do so. As stated in to-day's wire, I fully appreciate that in order to obtain the best results, we must co-operate as much as possible.'

New York Exchange.

"The following telegram, dated November 6th, 1917, from the secretary of the western sub-section of the Canadian Bankers' Association at Winnipeg was read:—

" 'Re Wheat Export Company, sub-section desirous of immediate decision by parent association as to rate of commission on New York exchange, whether one-tenth or one-sixteenth on basis bills sent for collection and credited account only when paid and on advice of sale of relative New York funds. Opinion members of sub-section divided.'

"After discussion it was resolved that the Wheat Export Company's drafts on New York be deposited for collection pro rata with the banks and that the proceeds be placed at the credit of the Wheat Export Company on the day of payment in New York with a net commission of one-tenth based on the rate for the day between banks."

Improve Financial Position.

The president of the Bankers' Association, discussing the same matter at the annual meeting, said: "We are endeavoring to arrange with the Wheat Export Company to help to stabilize exchange rates by utilizing the credit established by the Canadian banks when New York funds are at a considerable discount. Despite the large shipments of wheat to the American seaboard in the fall of 1916, for which payment was received in New York funds, New York exchange ruled throughout the following month of January, 1917, at from one-half to three-quarter premium, which indicates the great commercial demand in this country for New York funds to settle our trade balances.

"The sale of a large proportion of our wheat for cash at a phenomenal price will greatly improve the financial situation. It is also satisfactory to hear that the United States government are placing orders for munitions in Canada, and that these may extend to large figures. Their purchases will reduce Canada's adverse balance of trade with the United States, and if payment for them is made in Canada, will prove a solution of the exchange question."

TORONTO SAVINGS AND LOAN COMPANY

One of Ontario's many loaning institutions, which several years ago came of age, and which has an excellent reputation, is the Toronto Savings and Loan Company. Its president, Mr. Herbert C. Cox, recently presented the thirty-third annual report of the directors, and it reflects a sound financial position. After payment of interest on deposits and debentures, and all expenses of management, there remained net earnings amounting to $150,554. This amount, together with the balance brought forward in profit and loss account from 1916 of $36,147, made a total of $186,701, which amount was disposed of in the following manner: By payment of four quarterly dividends at the rate of 10 per cent. for the year, amounting to $100,000; by transfer to reserve fund, $50,000; by balance left in profit and loss account, $36.701; total, $186.701. The reserve fund now stands at $1,050,000. All payments maturing during the year on the company's investments were satisfactorily met, and the rentals from the property owned by the company were also promptly paid.

The following directors were elected for the ensuing year: Messrs. Herbert C. Cox, Richard Hall, W. G. Morrow, D. W. Dumble, E. R. Wood and E. T. Malone, K.C. At a subsequent meeting of the directors, Mr. Herbert C. Cox was elected president and Mr. Richard Hall and Mr. W. G. Morrow vice-presidents.

CANADA'S COAL PROBLEM

Vital Question Has Come to the Forefront — Press References to Recent Article in The Monetary Times

The territory between Winnipeg and Ottawa depends almost entirely upon the United States for coal. This, certainly, is a serious matter.

Following the publication of the valuable review of the fuel situation contributed to *The Monetary Times*, of January 4th last, by Mr. Arthur V. White, numerous press notices, personal letters and other comments have been received. All these have been of so distinctly favorable a character that it seems evident that much good must necessarily result, especially since greater effort is now being made by governmental, municipal and other authorities to secure action along the various lines which the article suggests. Mr. White for many years has been directing attention to this subject in a broad and statesmanlike manner. He has written with authority. For several years he practised his profession in London, England, where his work necessitated extensive travelling in England, France, Belgium and the United States. He is consulting engineer to the Commission of Conservation and to the International Joint Commission, Ottawa and Washington, on the Lake of the Woods Investigation. It is proposed here to cite some of the press comments so that it may be evident how increasingly great is the demand for positive, widespread and adequate action in this exceedingly grave national fuel problem:—

Referring to Mr. White's article, the *Toronto Sunday World* emphasized the fact that he directs early attention to the necessity before Canada "to develop, and that as rapidly as possible, her own fuel and power resources, and by coordination of transportation and other cognate agencies to provide for the early annual distribution, including reasonable reserves, of fuel to all communities in the Dominion. In some respects it is more important to move coal and have it adequately stored and distributed throughout Canada than it is to move the grain out of the country." He, continues the *World*, warns us: "Let it be appreciated that Canadians need never expect to have electrical energy replace coal and other fuel for heating purposes, except to a relatively limited extent.' The use of electric power to save fuel, and the greater conservation of fuel resources for heating purposes must be the national policy. Steps should at once be taken to give such a policy form and action. The first cost would be nothing as compared with the interests at stake."

Problem Treated on Statesmanship Basis

The people of Canada are becoming seized with the importance of grappling with the problem of our fuel supply; this fact is clearly reflected in recent press comments. The Kitchener (Ont.) *News Record*, discussing the article in *The Monetary Times*, is of the opinion that Mr. White treats the problem from a national standpoint and strictly with regard to the future. "That his treatise has been published at this juncture," it says, "doubtless was due to the hope that Canadians, who now are suffering from a shortage of fuel and power, would be the more deeply impressed by his plea that the situation demands national action. He avers that the alternative open to Canada is to develop, and that as rapidly as possible, her own fuel and power resources, so as to provide for an early, annual distribution of fuel to all communities in the Dominion. His article will appeal to the business and general public as both sensible and timely. Canadians will be impressed and led to request the federal government to take action and ascertain to what extent Mr. White's vision can be realized."

Argument is Sound—On National Grounds

That the argument set forth in *The Monetary Times* is essentially sound, is believed by *The Canadian Engineer*, Toronto. "For many years," it says, "Mr. White has studied and written about the fuel problem in Canada, not in its temporary aspect, but upon broad, national grounds. In the article above-mentioned, which is well worth perusal by all who are interested in Canada's economic situation, he makes it clear that the government should take immediate and forceful action."

Canada is possessed of raw material which is equally essential to the United States, and Mr. White's advice is to develop and conserve our resources in water-power, in pulpwood and other vital resources as a medium of international exchange against the day of necessity. When the United States shall say: "We have no more coal to sell for money," then we can reply, "Perhaps not, but how much will you exchange for so much electrical energy, or so much pulp? That is likely to be the new form of barter in the not distant future and for which we must be prepared if we are not to endure terrible suffering and industrial paralysis," says the *Quebec Chronicle*.

The *Hamilton Spectator* refers to the apathy of those who should take the initiative in solving our fuel problem. "Perhaps one of the first questions to which the new Union Government will address itself," it says, "will be an early utilization on a commercial basis, of the peat and lignite deposits of Ontario and the west. Would it be too much to expect some appreciable progress in this direction before the beginning of next winter?"

Fuelless Countries Coerced

Recalling the humiliating position into which Holland, Denmark, Norway, Sweden and Switzerland have been reduced through their dependency upon belligerent nations for their supplies of fuel, the *Toronto News* says:—"We have seen Germany reach out to control the iron and coal deposits of Northern France and the water-powers of Switzerland. Our own fuel resources will prove equal to our needs if we develop them on an adequate scale, acquire reasonable reserves, and provide the necessary shipping facilities. As Mr. White remarks, 'it is in some respects more important to move coal and have it adequately stored and distributed throughout Canada than it is to move the grain crop out of the country.' The fuel problem is easily one of the most vital questions with which the Unionist government has to deal."

Commenting upon the friendliness of the United States towards this country and its importance re the question of coal supply, the *Hillsboro Journal*, New Brunswick, properly points out that circumstances are conceivable in which our neighbor to the south might feel compelled in the interests of her own population completely to shut off the export of anthracite, and to barter her bituminous output for particularly necessary Canadian products, such as electrical power.

Warnings that the anthracite coal fields of the United States are within reasonable distance of exhaustion have been made with increasing frequency in late years. The extreme limit, at the rate of consumption before the war, has been placed so low as one hundred years, but it may be taken as reasonably certain that long before the expiry of that period—and earlier rather than later—the United States authorities will take steps to limit or even prohibit its further export. Having these points in mind, the *Daily Times*, St Thomas, Ont., says:—"Canada as a loyal and convinced ally in the war against German militarism has received, and, no doubt, will continue to receive, special consideration during its course. But the United States government will also and naturally place the needs of its own people first and have regard to their future rather than to that of Canada. Fortunately, however, Canada is not without compensations that may in some degree alleviate that situation when it comes. It must develop and make available its own resources both of coal and of water power under a system that will protect its people."

Work of National Necessity

Too often we hear people in positions of responsibility, or politicians in the heat of an election campaign, dilating on the great natural resources of Canada, as though they were some sort of a fathomless ocean of gold into which our people could dip and scoop for all time to come without any fear of diminishing the supply or endangering the source of it. Mr. White takes direct exception, for example, to a statement made in Montreal on December 6th, 1917, at the annual meeting of a bank, when the president said:—"Our natural resources are unbounded and our credit is irreproachable." As far back as 1908 the officials in the United States saw that natural resources in that country had their limits and the same thing applies to Canada.

"Ontario, of all the provinces," says the *Guelph Mercury*, "should be interested to the point of action. It may be that the best results would be obtained were it undertaken as a work of national interest, rather than as private speculation. The private companies, for instance, have not succeeded in the development of the great coal areas of southern British Columbia. Many of these mines are run as a matter of convenience for American railroads. If the Canadian people are ever to receive the direct advantage of their great coal-bearing areas, it will only be by tremendous national effort, in which

THE FUEL PROBLEM.

The Monetary Times Annual for January contains a timely article from the pen of Arthur V. White, a former well-known Woodstock man, on the coal problem of Canada. It is scarcely necessary at the present time to emphasize the importance of this problem; but the lessons of the present winter, severe as they are,

The Quebec Chronicle

QUEBEC, JANUARY 8, 1918

INTERNATIONAL EXCHANGE

A few days ago the Chronicle reproduced from the Monetary Times certain far-sighted observations on the coal situation by Mr. A. V. White, Consulting Engineer of the Conservation Commission, who is a widely known expert on the subject.

The high price of coal and the present shortage in supply are matters of common knowledge, but it is probable that these phenomena are almost entirely associated with war causes. On the contrary there is a situation that was already developing prior to 1914 and which events subsequent to that time have only served to accentuate.

SIXTEENTH ANNUAL REPORT OF

The Canada Trust Co.

HEAD OFFICES - - LONDON, CANADA

(Managed in connection with The Huron and Erie Mortgage Corporation.)

The Sixteenth Annual Meeting of the Shareholders was held at the Company's Offices in London, Ontario, on Tuesday, February 12th, 1918.

The Annual Report and Financial Statement were submitted as follows:—

After defraying the expenses of management and other charges, and making allowance for actual and possible losses, the balance available for distribution is $139,359.83 as follows:—

Brought forward from the previous year's account	$ 4,093.43
Net profits upon the past year's business	135,266.40
	$139,359.83
of which the following disposition has been made:—	
Two half-yearly dividends at 7 per cent. per annum	$ 69,993.00
Government and Business Tax	4,038.79
War Tax	1,928.31
Set aside for transfer to Patriotic and Red Cross Fund, Queen Alexandra Sanatorium Fund, and British Red Cross Fund	3,125.00
Transferred to Reserve Fund	50,000.00
Balance carried forward	10,274.73
	$139,359.83

The Reserve Fund now amounts to $550,000 or 55 per cent. of the Company's Paid-up Capital.

The sum of $3,125.00 has been set aside for Patriotic purposes as above noted. The Shareholders will be asked to approve these donations.

The accounts, vouchers and securities have been duly examined by the Auditors, whose report is appended.

The Directors desire to bear testimony to the very efficient manner in which the Officers of the Company have discharged their respective duties.

All of which is respectfully submitted.

T. G. MEREDITH,
President.

London, February 1st, 1918.

Statement as at 31st December, 1917.

FIFTY-FOURTH ANNUAL REPORT OF

The Huron and Erie Mortgage Corporation

HEAD OFFICES - - - - LONDON, CANADA

The Fifty-fourth Annual Meeting of the Shareholders was held at the Corporation's offices in London, Ontario, on Wednesday, February 13th, 1918.

The Annual Report and Financial Statement were submitted as follows:—

After defraying the expenses of management and all other charges, and making allowance for actual and possible losses, the balance available for distribution is $535,710.78, as follows:—

Brought forward from the previous year's account	$ 85,518.87
Net profits upon the past year's business	450,191.91
	$535,710.78

of which the following disposition has been made:—

Four quarterly dividends of 3 per cent. each (making the total distribution 12 per cent.)	$300,000.00
Government and Business Tax	8,381.48
War Tax	11,234.48
Set aside for Transfer to Pension Fund	10,000.00
Set aside for Transfer to Patriotic Fund, Canadian Red Cross Fund, British Red Cross Fund, Military Y.M.C.A. Fund, Queen Alexandra Sanatorium Fund and Halifax Relief Fund	9,425.00
Transferred to Branch Extension Fund	10,000.00
Transferred to Reserve Fund	100,000.00
Balance carried forward	86,669.82
	$535,710.78

The Reserve Fund now amounts to $3,100,000.00, or one hundred and twenty-four per cent. of the Paid-up Capital.

The sum of $10,000 has been set aside for transfer to the Pension Fund, and the sum of $9,425.00 for Patriotic purposes as above noted. The Shareholders will be asked to approve these transfers.

The Corporation has no real estate on hand other than office premises, all properties which have come into the possession of the Corporation by foreclosure, failure to obtain purchasers under power of sale, or otherwise, having been sold.

The Directors desire to bear testimony to the very efficient manner in which the Officers of the Corporation have discharged their respective duties.

All of which is respectfully submitted.

T. G. MEREDITH, President.

CANADA'S COAL PROBLEM

(Continued from page 26)

all our talent in labor, science, and organization must be brought directly to bear on the solution of the problem. Nothing else will do it. A half-measure or a faint-hearted attempt would be disastrous."

"If we do not prepare, we shall freeze to death some winter like butterflies," says the *Toronto World*, and it adds:—"There is no anthracite coal proper in Canada. Mr. Arthur V. White's able article, which everybody should read, tells us about the semi-anthracite of Alberta. This and a big supply of soft coal, lignite, peat, with oil, gas and wood, are all we can depend upon to keep life in our bodies if the United States fails us. All these resources should be nationalized and organized for distribution."

Look to Our Own Resources

The Monetary Times pointed out in an editorial article last month that if our outside supply of coal is cut off, we must look to our peat, lignites, and coal areas in east and west. Under the circumstances, the public naturally want to know what is being done to obtain this coal in east and west, and what is being done for its distribution to the central portions of the Dominion. There is a proper and rapidly strengthening desire on the part of the public to know what action the Dominion government is taking in these matters; what conferences are being held; whether expert knowledge is being applied; and what time and funds are necessary to obtain lignite and peat in order satisfactorily to relieve the situation, not only for the present but for the future also.

"Canada need not be dependent on the United States for good coal," says the *Mining Record*, Stellarton, N.S., "either for power or domestic purposes. Why is Nova Scotia not producing twelve, instead of six million tons. The chief reason is shortage of labor and lack of transportation facilities. Nova Scotia in the past could have shipped millions of tons of coal to Ontario had there been facilities for transportation. If Canada is not to continue to be dependent on the United States for coal, let those in authority begin to see to it that arrangements are made to carry coal right through from the Atlantic to the Province of Ontario. As soon as assurance is given that five to ten million tons of coal will be transported at a reasonable rate of freight, then, if there be a coal problem, it will be readily solved."

"That there is no reason for Canada, with her vast resources of fuel and water power to go cold or to have her industries throttled by reason of power shortage," is the opinion concurred in by the *Star*, Saskatoon, "but Canada," it adds, "may have a sore trial in both these respects unless every possible effort is speedily made to deal with the fuel and power situation in a comprehensive manner."

[Further Press references will appear in next issue.—*Editor.*]

LONDON & CANADIAN LOAN & AGENCY COMPANY.

The net earnings of the London and Canadian Loan and Agency Company, Limited, during 1917, were $163,000, or $4,600 in excess of those of 1916. This is equal to over 13 per cent. of the capital, as compared with 12.7 per cent. in 1916 and 15.4 per cent. in 1915. The year's earnings are equal also to 8 per cent. on the capital and reserve. The reserve was increased by $50,000 at the end of the year, and is now $850,000, or 86 per cent. of the capital. After making these provisions, and after paying the regular 8 per cent. dividend, the company was able to carry forward $22,000 to revenue account of the current year. These are satisfactory results, and reflect credit upon the work of Mr. Wadsworth, the manager and his staff and upon the conservative, yet progressive policy of the directorate, over which Mr. Thomas Long presides. Mr. Long informed the shareholders at the recent annual meeting that payments on mortgage accounts during the year had been satisfactory. He called their attention to the fact that the company's mortgages at the end of the year amounted to $4,286,000. These mortgages are almost entirely on improved farm property, all of which have been inspected by the company's own inspectors. The other items of assets shown in the statement are $329,000 of securities, $17,510 of call or short-term loans, and $223,418 cash.

Debentures outstanding decreased from $2,641,000 in 1915 to $2,409,000 in 1916, and to $2,231,000 last year, this circumstance indicating conditions in the debenture fields.

Mortgages and interest outstanding show a notable contraction. In 1915 this item was $4,627,000 and in 1916 $4,463,000, and last year $4,285,000. The changes in the character of the assets are indicated by the following table:—

	1916.	1917.
Mortgages	$4,463,643	$4,285,997
Call loans	80,660	17,510
Securities	311,927	329,017
Cash	112,720	223,418
	$4,968,953	$4,855,944

The London and Canadian Loan and Agency Company is one of our oldest loaning corporations, having been in business for forty-four years. While its head office is at Toronto, it has also branch offices at Winnipeg, Regina, Saskatoon and Yorkton. The Canadian organization consists of a Canadian board, including the president, Mr. Thomas Long, and the vice-president, Mr. Casimir S. Gzowski. The other directors are Messrs. A. H. Campbell, Charles C. Dalton, Goldwin L. Smith, Colin M. Black, W.S. (Edinburgh) and William C. Noxon. The manager is Mr. V. B. Wadsworth, who has guided the affairs of the company for so many years with great success, and the secretary, Mr. William Wedd, jr. In addition, the company has a Scottish advisory board, comprising the following members: Messrs. W. H. Murray, W.S., Ian Macintyre, W.S., and Colin M. Black, W.S., all of Edinburgh.

CANADA TRUST COMPANY

The Canada Trust Company, of London, Ontario, is operated largely in conjunction with the Huron and Erie Mortgage Corporation. The company was established sixteen years ago, and has a paid-up capital of $1,000,000. Its president, Mr. T. G. Meredith, K.C.; general manager, Major Hume Cronyn, M.P.; and secretary, Mr. M. Aylsworth, occupy similar positions with the mortgage corporation. The company held its annual meeting last week, and an excellent report was presented. After defraying the expenses of management and other charges, and making allowance for actual and possible losses, the balance available for distribution was $139,359 as follows: Brought forward from the previous year's account, $4,093; net profits upon the past year's business, $135,266; total, $139,359. The following disposition of that sum was made: Two half-yearly dividends at 7 per cent. per annum, $69,993; government and business tax, $4,038; war tax, $1,928; set aside for transfer to Patriotic and Red Cross fund, Queen Alexandra Sanatorium fund and British Red Cross fund, $3,125; and transferred to reserve fund, $50,000, leaving a balance carried forward of $10,274; total, $139,359. The reserve fund now amounts to $550,000, or 55 per cent. of the company's paid-up capital.

An interesting feature of the meeting was the reference made to the importance of appointing a reputable trust company, such as the London corporation, for the administration of estates. During 1917, there was an increase of over 25 per cent. in the number of wills deposited in the company's vaults in which the company had been named as executor. Mr. T. G. Meredith, the president, stated that it was most encouraging to note that the public are rapidly showing a preference for the appointment, as executor, of such companies instead of for the old method of obtaining the uncertain service of individuals in that capacity. Mr. J. B. McKillop, a director of the company, said he was not surprised at this development when the advantages to be gained by such appointment were considered. "Unlike individual executors," he continued, "this company's existence is perpetual. It keeps accurate and continuously audited accounts, and renders regular reports to beneficiaries; it cannot be influenced by family sentiment or quarrels; it has ample financial responsibility; and last, but not least, the fees allowed to this company for its services are fixed by the judge of the Surrogate Court at the time of the passing of the accounts, and in many cases they are less than the amount that would be allotted to individuals acting in the same capacity. Considerable weight was attached to Mr. McKillop's remarks, as he acts as crown attorney for the county of Middlesex.

An analysis of the Canada Trust Company's financial statement indicates that this corporation remains in a strong position.

The Dominion Savings and Investment Society

The Forty-Fifth Annual General Meeting of the Society was held at their Head Office in the Dominion Savings Building at 11 a.m., on Tuesday, the 12th day of February, 1918.

There were present: T. H. Purdom, K.C., President (who occupied the chair); John Ferguson, Vice-President; W. J. McMurtry, Toronto; James T. Moses, London; George Angus, John Purdom, H. Bapty, Alexander Purdom, F. D. Parke, W. W. Purdom, Nathaniel Mills and others.

The Managing Director, Mr. N. Mills, then read the following report:—

Forty-Fifth Annual Report to the Shareholders of The Dominion Savings and Investment Society

The Directors beg leave to submit their report for the year ending December 31st, 1917, together with the duly audited balance sheet.

The net profits for the year amounted to the sum of $58,125.87. The balance at the credit of the Contingent Account was the sum of $2,541.03, making together the sum of $60,666.90. This sum provided for the payment of two half-yearly dividends, at the rate of five per cent. per annum, amounting to the sum of $46,741.42, the addition of $10,000.00 to the Reserve Fund, which now amounts to the sum of $260,000.00, leaving the Contingent Account a balance of $3,925.48.

The assets are more than double the amount of the liabilities, and the Reserve Fund alone is almost twenty-five per cent. of the total liabilities to the public.

The books of the Society have been regularly audited by Messrs. John Lochead and W. J. Harvey, whose certificate is attached to the financial statement.

All the Directors retire annually and are eligible for re-election.

Respectfully submitted, T. H. PURDOM, President.

NATHANIEL MILLS, Manager.

We hereby certify that we have made a regular audit of the books of The Dominion Savings and Investment Society for the year 1917. The cash, bank accounts and vouchers have been kept under careful examination. All postings have been checked, all entries in the Society's ledgers have been verified, and the accompanying statements of "Profit and Loss" and "Assets and Liabilities" are, in our opinion, a correct showing of the affairs of the Society.

London, January 26th, 1918.

JOHN LOCHEAD, } Auditors.
W. J. HARVEY, }

The President moved the adoption of the Report, which was seconded by the Vice-President, Mr. John Ferguson, and carried unanimously.

The Directors: T. H. Purdom, K.C., John Ferguson, W. J. McMurtry, John Purdom, Samuel Wright, John Milne and Nathaniel Mills, Managing Director, were re-elected, and at a subsequent meeting of the Directors, T. H. Purdom, K.C., was elected President, and John Ferguson, Vice-President for the ensuing year.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

The decision to govern the city of Montreal with the assistance of a businesslike commission will materially help the credit of that city, credit which has suffered in the past by maladministraton of the city's affairs. The appointment of the Bureau of Municipal Research to investigate the city's affairs was also a desirable innovation. The bureau has just made its report, which shows that by certain economies and readjustments the city would save more than $1,000,000 annually. Undoubtedly, the better elements of the city and of the province generally have decided that Montreal must have a thorough civic housecleaning, and the recommendations of the Bureau of Municipal Research are, therefore, likely to be adopted. In view of the financing which the city has to do, this is an important consideration.

The report of the bureau condemns the police department, drawing attention in detail to inefficiency, over-officering, the presence of outside influences in the appointments and promotions, and the defective platoon system. The fire department is praised, and a few suggestions for further work and further efficiency are made. The elimination of the clerical staff of the board of control is advised, such work to be done by the city clerk's staff. The establishment of a civil service commission, the sitting of the Recorder's Court on Sundays and holidays are among the recommendations of the elaborate report.

In a tabulated table under the heading of "savings" the report declares that on a conservative estimate $689,000 may be economized by the adoption of the various suggestions submitted. In addition to the $689,000 of savings listed are innumerable other instances where savings can be made if the recommendations in the report are adopted, the amount of which cannot be concluded in advance, but will bring the aggregate to more than $1,000,000.

Certain details of the $689,000 are of interest. Under the head of central government there is an amount of $40,000, which would mean the elimination of council, mayor and commissioners and office of the board of commissioners, the total being $90,000, less $50,000, which the system, the report suggests, would cost. On the purchasing department, spending $1,500,000, there could be saved, says the report, 5 to 10 per cent. of $100,000. Several small amounts are included, such as $8,000 on the board of assessors, $15,000 on the department of privileges and licenses, $10,000 under the head of comptroller and auditor, $15,000 from the city bulletin and city clerk's office, $121,250 under the police department head, $36,450 in the fire department, $100,000 in the public works, $4,000 in the sewers department, $136,700 on the water supply, $18,000 on municipal buildings, $8,000 in the incineration department, $9,000 in parks, $9,250 on building inspection, $2,800 on the markets, $15,000 on hygiene and health, and $30,000 under municipal assistance, and other small amounts, making the total of $689,000.

Manitoba.—Mr. J. A. Thompson, Winnipeg, reports the purchase of Manitoba school district debentures as follows: Makinak S.D., $7,000 6½ per cent. 20-years; Eden Con. S.D., $4,000 6 per cent. 20-years; Rocky Hill S.D., $2,000 7 per cent. 15-years.

Saskatchewan.—The following is a list of authorizations granted by the local government board from January 2nd to February 8th, 1918:—

School Districts.—*Granlich, $2,000 10-years not ex. 8 per cent. annuity; R. L. Smith, Macklin. *Hazel Ridge, $1,300 10-years not ex. 8 per cent. annuity; J. Hunt, Shellbrook. Grosmont, $1,500 10-years not ex. 8 per cent. instalment; J. B. Lewis, Lemsford. *Bolney, $1,500 10-years not ex. 8 per cent. annuity; R. Isted, Bolney. Atkins, $1,800 10-years not ex. 8 per cent. annuity; Hans Soum, East End. Hill Point, $1,800 10-years not ex. 8 per cent. annuity; J. Chesters, Rossduff. Montro, $2,000 10-years not ex. 8 per cent. instalment; H. Skinner, Maymont. *Cavendish, $1,500 10-years not ex. 8 per cent. instalment; Geo. Rettig, Quinton. *Cut Arm, $1,600 10-years not ex. 8 per cent. annuity; Geo. Mess, Bredenbury. Pinto Head, $2,000 10-years not ex. 8 per cent. annuity; A. M. Fulcher, Buffalo Horn.

Rural Telephone Companies.—Mazenod, $1,250 10-years not ex. 8 per cent. annuity; Jas. H. Thomas, Masenod. Haultain, $4,000 15-years not ex. 8 per cent. annuity; Wm Waters, Haultain. Weyburn Plains, $2,000 15-years not ex. 8 per cent. annuity; W. J. Bullis, Weyburn. Dilke, $600 15-years not ex. 8 per cent. annuity; Thos. Ritson, Dilke. Prairie Lily, $250 15 years not ex. 8 per cent. annuity; M. R. Kraemer, Rouleau. Tribune, $3,100 15-years not ex. 8 per cent. annuity; F. W. Johnston, Tribune. River Ayr, $3,200 15-years not ex. 8 per cent. annuity; J. N. R. Finlayson, Broadview. Westbrook-Gladwin, $500 15-years not ex. 8 per cent. annuity; C. J. Smith, Theodore. Bridgeford, $5,800 15-years not ex. 8 per cent. annuity; F. E. Mann, Bridgeford. Verdun, $1.700 15-years not ex. 8 per cent. annuity; A. F Ransom, Kipling.

Villages.—Prelate, $7,500 15-years instalment not ex. 8 per cent; J. J. Keelan, Prelate. Lancer, $2,700 10-years instalment not ex. 8 per cent.; W. G. McGillvary, Lancer. Moss Bank, $3,000 10-year instalment not ex. 8 per cent.; J. Phillips, Moss Bank.

The following is a list of debentures reported sold from January 2nd to February 8th, 1918:—

School Districts.—Earl Grey, $1,500, Muriel, $1,900; Canada Landed and National Investment Company, Winnipeg. Dickson. $1,600; A. Davis, Perdue. Wideview, $2,000, Gavrelle, $3,700, Sand Hill, $1,200, Glentworth, $2,000, Snowdon, $2,000; Waterman-Waterbury Manufacturing Company, Limited, Winnipeg. Bausley, $2,000; Great-West Life Assurance Company, Winnipeg. Korbel, $800; J. H. Kem, Moose Jaw.

Rural Telephone Companies.—Hawarden, $2,200, Lake Johnston, $800; Union Bank of Canada, Souris. North Quill Lake, $5,400; E. L. Sinclair, Foley, Alabama. Shallow Lake, $200; Mrs. N. M. Lee, Marchwell. Sceptre, $1,500; J. W. Moore, Sceptre. Blucher, $2,900; Regina Public School Sinking Fund. Shaunavon-Eastern, $11,300; G. T. Brander, Regina. East Borden, $1,400; A. H. Wensley, Borden. Ridgeway, $4.800; Canada West Electric, Florien Becker, Wm. Packham, et al. Prairie Queen, $3.700; Bond and Debenture Corporation, Winnipeg. Western Edam, $17,000, Eastern Edam, $16,000; T. D. Rourke, Regina. Star City, $13,300; H. O'Hara and Company, Toronto. Unity. $36,400; W. D. Craig, Regina.

BANK CLEARINGS

The following are the bank clearings for the weeks of February 15th, 1917, and February 16th, 1918, respectively, with changes:—

	Week ended Feb. 16, '18.	Week ended Feb. 15, '17.		Changes.

DIRECTORS' REPORT.

**To the Shareholders of
BRANDRAM-HENDERSON, LIMITED:**

Your Directors submit herewith their Eleventh Annual Report with Statement of Assets and Liabilities and abstract of Profit and Los Account for the year ended November 30th, 1917.

The Net Profits for the year amounted to $221,429.22, which, with the balance of $349,464.80 carried forward from the previous year, makes the sum of $570,894.02 to the credit of the Profit and Loss account. Out of this sum has been paid the interest on bonds to September 30th, and a reserve for interest accruing for October and November, also the dividend on the Preferred Stock paid and accrued. The sum of $7,500.00 has been provided as a reserve for depreciation, and a further sum of $10,000.00 as a special reserve for depreciation by way of provision for possible contingencies. The sum of $29,100.00 was absorbed by the 3 per cent. dividend paid on the Common Stock in February last, and the sum of $7,062.50 to cover patriotic donations during the year. Owing to insufficient information from the authorities an inadequate sum was set aside a year ago for the first year's War Tax, and in consequence it has been necessary to provide at this time the sum of $31,917.67. The sum of $15,600.00 has been applied for Sinking Fund purposes, leaving a balance of $412,184.92.

The entire cost of upkeep and renewals to property has, as in previous years, been charged to Operating Expenses.

The increase in the current Liabilities is due to a greater volume of business, necessitating larger stocks as shown by the inventories and to the higher cost of all raw materials.

Messrs. P. S. Ross & Sons, as in the past, have audited the books and accounts and their report is herewith submitted.

Your Directors are pleased to report that the sales and profits in all Divisions of the Company's activities, with the exception of the Munitions Division, have shown healthy increases. These increases have been sufficiently substantial to offset the material decline in Bullet sales, occasioned by the new methods of the Munitions Board explained in our last report.

In order to satisfactorily develop our British Columbia business it was found desirable to establish a depot in Vancouver, and, owing to the strong sentiment in favor of provincial organizations, a separate charter has been secured to do business in the name of Brandram-Henderson of British Columbia, Limited. We have thus completed our sales arrangements for the entire Dominion, with distributing points at Halifax, St. John, Montreal, Toronto, Winnipeg, Edmonton, Calgary, and Vancouver.

The establishment of a Marine Specialties Branch under its own Manager, was decided upon and effected in June last, in order to deal more effectively with the greatly increasing demand for technical paints and sundries for shipbuilding purposes.
foreign representatives, all of whom are doing well.

Your Directors have paid the usual dividends on the Preferred Stock, and now recommend a disbursement of 4 per cent on the Common
A characteristic of the year's trading has been the rapidly increasing export trade, justifying the appointment of several additional
Stock, payable 1 per cent. quarterly on March 1st, June 1st, September 3rd, and November 30th to shareholders of record one month prior to dates of quarterly payments.

On behalf of the Directors,

Montreal, January 10th, 1918.

GEORGE HENDERSON, President

LAKE OF THE WOODS MILLING COMPANY

The board of directors of the Lake of the Woods Milling Company in placing the common stock on a 10 per cent. per annum dividend basis on February 16th, as against the 8 per cent. rate which has prevailed for many years, announced that the earnings of the Sunset Company, a subsidiary, constituted the basis for the increase. The Sunset Company manufactures jute and cotton bags, and the last balance sheet of the Lake of the Woods Company showed among investments the $50,000 capital stock of that company.

The bonus is also stated to originate in the earning of the Sunset Company. The bonus is made up of 2 per cent. from the Sunset Company's earnings for the year ended August 31st last and ½ of 1 per cent. for the quarter ended November 30th last. As ½ of 1 per cent. of the present quarterly dividend of the Lake of the Woods is stated to come from the Sunset Company's earnings, the latter accounts for the advance in the regular dividend.

HOLLINGER CONSOLIDATED GOLD MINES

The annual meeting of the shareholders of Hollinger Consolidated Gold Mines, Limited, took place on February 14th, but only the usual routine business of presenting and adopting the annual reports took place. Nothing additional on the prospects of a dividend resumption was announced outside of that contained in the report of the directors recently issued.

Mr. Ross H. McMaster, assistant general manager of the Steel Company of Canada, will leave shortly for Washington to act on the new Canadian War Mission, of which Mr. Lloyd Harris, of Brantford, is the head. The commission will handle Canada's affairs in the United States until the end of the war, and Mr. McMaster's work with the mission will be principally in connection with the iron and steel industry, in which capacity he will be the buying agent for the Dominion of Canada.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have examined the Books and Accounts of the Canada Cement Company, Limited, for the year ending December 31st, 1917, and have obtained all the information and explanations which we required; and we certify that in our opinion the above Balance Sheet at December 31st, 1917, is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

Approved on Behalf of the Board:
F. P. Jones, Director.
H. L. Doble, Director.

MONTREAL STOCK EXCHANGE

If through force of circumstances or for other reasons you have to sell your Victory Bonds, remember there are many people who realize their investment value at the present price, and are desirous of adding to their holdings.

It is one of the functions of the Members of the Montreal Stock Exchange to provide a central market where all who wish to buy or sell Victory Bonds or other securities, may come and be assured of dealing at the correct market price.

If you want to add to your holdings of Victory Bonds, or desire to invest money in other securities, any Member of the Montreal Stock Exchange will be pleased to give you complete and reliable information.

Write today to the Secretary of the Montreal Stock Exchange, Room 432, Stock Exchange Building, Montreal.

PUBLICATIONS RECEIVED

Municipal Finance.—Annual report of the assessment commissioner for the city of Toronto.

Trade.—Booklet on "Profit-sharing and Producers' Co-operation in Canada," by Mr. H. Mitchell.

Labor.—Report of the strikes and lockouts in Canada for the period 1901-1916. Published by the Department of Labor, Ottawa.

Business Conditions.—Annual review of business conditions in Canada. Issued by the Canadian Bank of Commerce, Toronto.

Coal Shortage.—"Wood Fuel to Relieve the Coal Shortage in Eastern Canada," by Clyde Leavitt. Issued by the Commission of Conservation, Ottawa.

Petroleum.—"Petroleum in Canada," by Victor Ross, financial editor of the Toronto Globe. This little book, which has been issued by the Imperial Oil Company of Canada, Toronto, is an excellent history of the petroleum resources and industry of the Dominion. Mr. Ross has written an interesting and instructive story confining his volume to the facts and deleting technicalities.

Iron and Steel.—The latest addition to the ranks of technical papers in the Dominion is "Iron and Steel of Canada," the first issue of which has just appeared. It is published by the Industrial and Educational Press, Montreal and Toronto. The initial number is very creditable and contains many interesting articles, including a review of the iron and steel industry.

EQUIPMENT OF C.N.R. WOULD RESULT IN BIG REVENUE

The proceedings of the board of arbitration, sitting at Osgoode Hall to hear evidence as to the value of the Canadian Northern Railway stock, on February 14th were enlivened by a debate between members of the board as to the feasibility of Mr. W. H. Coverdale's plan for extensions to the Canadian Northern Railway system in mileage and equipment, which, he declared, if put into execution, would result in practically doubling the earning capacity of the railway. Mr. Coverdale is the New York consulting engineer who examined the Canadian Northern Railway system and finances for the purpose of the Loomis-Platten report, and his programme of betterments involves the expenditure, before 1923, of a sum approximating $80,000,000. With this expenditure allocated as he suggests, he estimates that gross earnings standing at $35,476,000, as on June 30th, 1916, would be increased to $80,320,000, with a surplus over expenses of $4,615,000 by 1923. Mr. Coverdale declared that his estimate of increases in earnings was conservative, and pointed to the fact that for the 1917 period the railway had actually exceeded the amount estimated by $2,000,000.

The point of contention between members of the board was as to the possibility of finding the funds to pay for the betterments. Mr. Justice Harris expressed an opinion that no sane man would attempt such a programme of expenditures under present conditions, as he believed it would be impossible to get the money. Counsel for Mackenzie and Mann contended that the expenditures were vital and must be made if the railway is to continue its existence as a going concern. Sir William Meredith then broke into the argument in support of Justice Harris, and declared that the minister of finance had intimated that he would not put a dollar into additional expenditures on capital account. Wallace Nesbitt, K.C., disagreed with the chairman, and declared that the money would be available if the proposals proved to be sound.

Preston, Ont.—February 16—Clothing and furnishing store of J. P. O'Connor on King Street was destroyed. Estimated loss, $15,000.

Rosenfeld, Man.—February 17—The Lake of the Woods Milling Company's elevator and 1,000 bushels of barley were destroyed. Estimated loss, $30,000.

Toronto, Ont.—February 17—Home of Jack Templeman, of 101 Walton Street, was damaged. Estimated loss on building, $1,000; on contents, $1,500.

Winnipeg, Man.—January 31—A total insurance of $200,000 is carried by Chebrier and Sons on their premises, which were destroyed. The amount is divided among the companies as follows: On Stock—Ætna, $6,000; Alliance, $1,000; American, $5,000; British America, $10,000; British Crown, $5,000; British Dominions, $5,000; Canadian, $1,500; Continental, $5,000; Continental of Winnipeg, $7,500; Dominion, $1,000; Globe Indemnity, $17,500; Home, $5,000; North America, $5,000; London Guarantee, $5,000; London Mutual, $6,000; Millers National, $1,500; Minnesota Underwriters, $5,000; Mount Royal, $5,000; National-Ben Franklin, $1,500; National of Hartford, $12,500; National of Paris, $5,000; Northern, $2,500; Ocean, $6,500; Phœnix of London, $6,500; Provincial, $1,200; Quebec, $5,000; Queen, $2,500; Royal Exchange, $5,000; Scottish Union, $4,000; Springfield, $10,000; Union, $5,000; Western, $2,500. On Building—Occidental, $35,000.

February 18—Store and office building on the south-west corner of Main and Bannantyne Streets was damaged. Estimated loss, $55,000.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Saskatoon, Sask.—Fire Chief Heath submits the following report for the month of January to *The Monetary Times*. The description of property damaged or destroyed is as follows: Automobile garages, 2; departmental store, 1; dwelling-houses, 3; dry cleaner's store, 1; offices and apartment block.

The causes of the fires were as follows: Defective electric wiring, 1; defective fireplace, 1; gasoline explosion, 1; automobile backfiring, 1; defective chimneys, 2; waterfront explosion, 1; woodwork too close to furnace, 1.

The estimated damage to buildings was $1,760, and to contents, $2,307. The amount of insurance on buildings was $232,000, and the amount on contents $398,300, making a total of $630,800.

Winnipeg, Man.—February 5—The owners of the Riverview Hotel carried a total insurance of $42,500 on their property, which was destroyed. The amount is divided among the following companies: Ætna, $2,500; Alliance, $2,500; Employers, $2,500; Guardian, $5,000; London Assurance, $5,000; Liverpool and London and Globe, $5,000; London and Lancashire, $2,500; Firemen's Fund, $5,000; Niagara, $5,000; North America, $2,500 National Union, $2,500; St. Paul, $2,500.

CANADA CEMENT COMPANY

The balance sheet of the Canada Cement Company for the past year shows a notable improvement in the general position of the corporation. The earnings during 1917 were satisfactory, and helped materially to give a healthy complexion to the financial statement. The cash and capital position is substantial, and large sums were allowed for depreciation and special equipment written off. The report presented to the shareholders at the annual meeting reflected the able management of Mr. F. P. Jones, whose appointment as a member of the newly-created War Trade Board of Canada was recently announced. Mr. Jones is supported by a good technical and executive staff and by a directorate (headed by Senator Edwards as president) which takes a keen interest in the company's affairs.

The net earnings last year were $2,861,246, an increase of $642,398, or 29 per cent., over those of 1916, which up to then had been the best year in the company's history. This amount is arrived at after allowing $2,190,616 for depreciation and special equipment written off, a sum which would appear ample. After meeting fixed charges and paying the regular dividend on the preferred stock, the balance of $1,694,181 represented earnings of 12.6 per cent. on the common stock, as compared with $1,040,086, equal to 7.7 per cent., earned on the common in 1916.

The results as noted above are apparently before deduction of the war tax. The profit and loss figures for the year include two special appropriation for reserves, one of $350,000 for contingent reserve, and one of $50,000 for repairs and renewals. In the balance sheet the item, "contingent reserve," amounting in all to $750,000, is explained with the remark that a portion of this reserve is available for government taxes. The $350.000 reserved out of the year's profits for contingent account is presumably an offset against the liability for war taxes in respect to the year's earnings. After all deductions, including the $400,000 appropriated for reserves, the company carried forward $484,181 to surplus, bringing that account up to $2.576.999.

In presenting the report of the directors, Senator Edwards stated that earnings from the cement business proper were more than sufficient to take care of all fixed charges, preferred dividends and ordinary dividends chargeable to the year's profit.

The company's current liabilities, which increased substantially when the company commenced munition work, were reduced during the past year from $2,674,630 to $634.398. Current assets, including war loan investments, increased $400.000 to $5,291.985. The surplus of working capital rose to $1,667,587, compared with $2,221,625 in the previous year. The company has good reason to be satisfied with the year's results and its position.

The London and Canadian Loan and Agency Company, Limited

FORTY-FOURTH ANNUAL MEETING

The Forty-fourth Annual General Meeting was held in the Company's Head Offices, 51 Yonge Street, Toronto, on Wednesday, February 13th, 1918, at twelve o'clock noon.

The President, Mr. Thomas Long, occupied the chair, and the Secretary, Mr. William Wedd, Jr., acted as Secretary of the meeting. Messrs. D'Arcy Grierson and W. Ridout Wadsworth were appointed Scrutineers.

The Annual Report was unanimously adopted, and also the statements for the year ending 31st December, 1917, as presented by the Manager, Mr. V. B. Wadsworth. The Report was as follows:—

The Directors have pleasure in submitting to the Shareholders the Forty-fourth Annual Report of the Company and the Statement of Accounts for the year ending 31st December, 1917, the result being as follows:—

The gross revenue, including the balance ($8,018.13) brought forward from last year, amounted to	$356,363.45
And, after deducting the cost of management, interest on Debentures, Dominion, Provincial and Municipal Taxes (including War Tax) and other charges, amounting in all to	184,366.30
There remains a net profit of	$171,997.15
Out of which four quarterly dividends have been paid at the rate of 8 per cent. per annum, amounting to	100,000.00
Leaving a balance of	$ 71,997.15

Of which $50,000 has been transferred to the Company's "Rest Account," and $21,997.15 is carried forward at the credit of "Revenue Account" to next year.

The Rest Account now amounts to $850,000, being 68 per cent. of the subscribed and fully paid-up Capital Stock of the Company.

During the year applications for loans on mortgages were accepted and renewed to the amount of $716,620 on real estate valued at $2,021,000.

The total assets of the Company are now $4,855,944.

Repayments on mortgage account have been very satisfactory.

The Scottish Board and Agents have rendered very efficient service, and the Officers and Staff continue to discharge their duties in a faithful and satisfactory manner.

The books, accounts, vouchers and securities have been duly examined by the Auditors, and their certificate of audit is hereto appended.

THOMAS LONG,
President.

V. B. WADSWORTH, Manager.

Audited and found correct.

J. GEORGE, F.C.A., (Can.)
RUTHERFORD WILLIAMSON, C.A., } Auditors.

The Shareholders adopted a resolution confirming the Patriotic and Benevolent Grants for 1917, and approving of a grant of $2,000 to the Patriotic Fund for 1918.

The following gentlemen were elected Directors for the ensuing year: Thomas Long, Casimir S. Gzowski, A. H. Campbell, C. C. Dalton, Goldwin Larratt Smith, Colin M. Black, W. S., and William C. Noxon.

At a subsequent meeting of the newly-elected Board, Mr Thomas Long was elected President, and Mr. Casimir S Gzowski, Vice-President.

PERSONAL NOTES

Mr. R. Montague Davy was elected president of the Export Association of Canada, Limited, at the annual general meeting held at Montreal last week. Mr. R. E. Thorne was elected vice-president. These two gentlemen and Messrs. J. H. Sherrard, R. H. McMaster and Paul E. Joubert were appointed executive committee of the board of directors.

Mr. C. R. Drayton, manager for Canada of the Union Insurance Society of Canton, Limited, is at present on a business trip in western Canada. He is accompanied by Mr. C. H. P. Hay, the company's assistant general manager. Mr. Hay is on his way home to the head office at Hong Kong.

Mr. J. H. Gundy, of Toronto, is a member of the recently created War Trade Board of Canada. Mr. Gundy is recognized as one of the country's younger business men of exceptional ability and a financial authority. He brings to the personnel of the war trade board, energy, foresight and wide experience, which will prove of value in its important deliberations. During the recent Victory Loan campaign, he acted as vice-chairman of the Dominion Executive Committee and chairman of the Dominion Finance Committee, in connection with that campaign. He is a partner in the bond house of Wood, Gundy and Company, Toronto. Previously associated for several years with the Dominion Securities Corporation as secretary, he left that firm in 1905, and, with Mr. G. H. Wood, started the investment house of Wood, Gundy and Company. The War Trade Board, of which Mr. Gundy is a member, has very wide powers and authority.

J. H. GUNDY, TORONTO,

Elected Vice-President last week, Bond Dealers' Association of Canada. Mr. Gundy is also a member of the recently created War Trade Board of Canada.

Mr. James M. Bell, of Dundee, Scotland, has been elected to the board of Smart-Woods, Limited, to represent Scottish interests. He takes the place vacated by Mr. C. E. Archibald, Montreal. Mr. Bell is an authority on the jute industry, this being an important feature of the Smart-Woods business.

Mr. Charles Edward Clarke, of 25 Bedford Road, Toronto, died on Monday in the General Hospital. The late Mr. Clarke was president of Clarke and Clarke, Limited, leather manufacturers, Toronto. He was the son of the late John Clarke, of Peterborough, in which city he was born 52 years ago. The death of his brother only seven weeks ago left him as the surviving member of the firm. He was greatly interested in the promotion of the Penny Bank system in Toronto and was an energetic churchman and sidesman in St. Alban's Cathedral.

Mr. John G. Kent has been appointed permanent managing director of the Canadian National Exhibition. Mr. Kent has acted for many years as member of the board of directors, as president, and as honorary manager. He is president of the Toronto Board of Trade.

Mr. W. S. Hodgens, secretary of the Dominion Securities Corporation, Toronto, has been appointed secretary of the recently created War Trade Board of Canada. Mr. Hodgens is well known among the financial and business interests. He is a comparatively young man, capable, energetic and exceedingly conscientious. His work as chairman of the Dominion Business Committee in connection with the Victory Loan last fall was an example of his efficiency. He will make an excellent secretary of the War Trade Board.

Mr. E. P. Heaton, Ontario fire marshal, points that a great many fires, especially among foreigners, occur during the absence of the occupants and usually the "cause" is classed among the "unknown." These fires are entirely too prevalent and investigations point that over-insurance is primarily the cause. A more careful inspection and survey of the value of contents and buildings on the part of the insurance companies would do much to remedy this class of fire waste and prevent irresponsible persons burning up their property simply as a matter of gain.

Mr. R. J. Younge, general manager of the Export Association of Canada, has been asked to devote his time to the work of the Canadian War Trade Board at Washington. The directors of the association, appreciating the important opportunities now being opened for Canadian industries to assist the war programme of our ally, the United States, have agreed to this for such period of the present year as may be necessary. His duties during his absence will be fully taken care of by the assistant manager and the other members of the staff, and there is every reason to believe that the work of the Export Association of Canada will not be retarded. Mr. Younge has a lengthy experience in industrial work and marketing problems. His services will be of considerable value in connection with the work of the War Trade Board at Washington.

Mr. Walter J. Helm, who has just been appointed manager of the Midland Loan and Savings Company, Port Hope, Ont., might have been a banker instead of a loan manager to-day had he not always been what he terms "a crank where fresh air is concerned." On leaving school he entered the service of the Bank of Toronto, where he remained for eight years in various positions in Port Hope, London and Toronto. His experience during the last two years with the bank in an old building determined his resignation. He could not get enough open windows there so he decided to give up banking as an occupation. He then took a trip to Europe and upon his return was offered and accepted the position of secretary of the H. W. McNeill Company, Limited, a coal mine company operating in the Canadian Rockies, near Banff. After two years spent in the mountains in this situation, the position of assistant manager of the Midland Loan and Savings Company at Port Hope was offered to him, and this he has filled for the past twelve years, being recently appointed manager on the death of the company's late manager. He is well fitted for the position.

MONTREAL'S BOND OFFERING

The Bank of Montreal, acting as fiscal agent for the city of Montreal, announced last night that it was authorized to offer for public sale $6,900,000 five-year 6 per cent. refunding gold bonds of the city of Montreal at par flat. The bonds are dated December 1st, 1917, and as a full half-year's interest will be paid on June 1st, although subscriptions for the issue will not be due until April 8th, the privilege of the first coupon makes the net yield of the bonds about 6½ per cent.

Applications for the bonds will be received by the Bank of Montreal or any of its branches, beginning Monday, February 25th, and the offering is subject to withdrawal on or before March 18th. The bonds will be issued in coupon form in denominations of $100, $500 and $1,000, with principal and interest payable in gold at the city treasurer's office at Montreal or at the agency of the Bank of Montreal in New York.

The issue is being made to refund $6,900,000 three-year 5 per cent. notes of the city, which fell due in New York last December, temporary arrangements having been made through the Bank of Montreal at the time to finance the maturity.

ANNUAL MEETING OF

The Montreal City and District Savings Bank

SEVENTY-FIRST ANNUAL REPORT

To the Shareholders,
Gentlemen :

MONTREAL, February 11th, 1918.

Your Directors have pleasure in presenting the Seventy-first Annual Report of the affairs of the Bank and the result of its operations for the year ending December 31st, 1917.

The net profits for the year were $222,189.54, and the balance brought forward from last year's Profit and Loss Account was $172,308.66, making a total of $394,498.20. From this amount have been paid four quarterly dividends to our Shareholders and $15,000 has been contributed to the Canadian Patriotic and Red Cross Funds, leaving a balance at the Credit of Profit and Loss Account of $214,023.56 to be carried forward to next year.

In order to accommodate our clients in Notre Dame de Graces, it is our intention to open a branch there about the first of May next, and a site has been secured for the purpose on the north-west corner of Sherbrooke Street and Oxford Avenue.

As usual a frequent and thorough inspection of the books and assets of the Bank has been made during the year.

The report of the Auditors and the Balance Sheet are herewith submitted.

R. DANDURAND, *President.*

Statement of the Affairs of the Montreal City and District Savings Bank on the 31st December, 1917.

Auditors' Report

Having obtained all the information and explanations we have required, and having satisfied ourselves of the correctness of the Cash Balances, and examined the Securities held against the Money at Call and Short Notice, and those representing the investments of the Bank, and having examined the foregoing Balance Sheet and compared it with the Books at the Head Office, and with the Certified Returns from the Branches, we are of opinion that the transactions of the Bank have been within its powers, and that the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs as shown by the Books of the Bank.

Table of Growth

Year	Insurance Issued and Revived	Net Insurance in Force
1914	$1,394,505	$2,946,552
1915	1,529,266	3,292,204
1916	1,589,983	3,719,391
1917	1,726,430	4,404,016

Year	Net Premium Income	Total Assets
1914	$ 75,256.87	$237,599.82
1915	105,369.78	284,133.27
1916	122,890.03	346,814.76
1917	151,966.75	422,552.13

SPECIAL FEATURES

Net premium income increased by 23.66 per cent. and total assets 21.54 per cent. during 1917.

Average interest earned on investments, including cash in banks, 6.58 per cent.

Average annual premium per $1,000 of net insurance in force, $37.50.

Average amount of policy, $1,400.

THE RESULTS OF 1917

The Thirty-first Annual Report of The Manufacturers Life Insurance Company shows a record of growth unsurpassed by previous achievements.

The new assurances amounted to the large sum of $16,485,403, and the Insurance in Force, $98,128,631.

The gain in Insurance, $9,010,272,. was the largest in the history of the Company.

The Increase in assets was $1,891,348. The Assets now total $24,585,783.

The income exceeded $5,100,000 and also established a new record.

The mortality was again very favorable, despite the extra claims imposed by the war, being more than 25% below that provided for.

Notwithstanding the fact that the Company made large purchases of War Bonds during the year, the average rate of interest earned was 6.52%.

The Surplus, exclusive of Special Reserve, now amounts to $2,530,054.54. This Surplus, compiled under the Canadian Government Standard, would amount to $3,670,589.54, showing a gain over the previous year of $226,805.59.

TO DEVELOP FOREIGN TRADE

Export Association of Canada Ask for Government's Consideration

That the Dominion government should give special consideration to the encouragement of the export of manufactured products in Canada and help to place export business upon a sound permanent basis, was the subject of a resolution adopted at the annual meeting of the Export Association of Canada, held at Montreal last week. The resolution called for a national plan for the development of our natural resources, their conversion into finished products, and their eventual sale in the markets of the world. The directors of the association are strongly of the opinion that the whole subject of export in manufactured products from Canada should, at the present time, receive special consideration from the Dominion government.

Cultivation of Trade.

Pending the coming of peace, they recommend the continuance of their association's work along the lines originally adopted, the cultivation of trade connections with reliable sources throughout the British Empire and the other allied countries, and the encouragement of Canadian factories to compete for export business in these markets. Whether Canada will enjoy tariff preferences after the war, they say, is still doubtful. "If these materialize, so much the better," they continue, "but whether they do or not, our duty is clearly to organize in this present trying period so that, when more normal conditions prevail, we may do our share toward filling our munition factories with commercial orders, providing employment for our returning soldiers, and helping our country to arrive at a balance of trade which will enable her to meet her national obligations. Small as may seem the beginning we have already made in this direction, the organization work which we have already accomplished must eventually yield excellent results."

Shipping Difficulties.

The report of the directors of the association, presented at the annual meeting, pointed out that for the first nine months of the year, "shipping facilities to our chief markets, Australasia and England, were fairly satisfactory with respect to the number of shipping opportunities offered, and at the end of September, despite the fact that rates had been advanced and sailings had become less regular, the association completed shipment of practically all material which manufacturers then had ready against our orders.

"Beginning with the month of October, 1917, and continuing to date, conditions steadily became worse; at the present time shipping from the Atlantic seaboard to Australasia is practically impossible for the reasons: (a) There are no sailings from Canada; and (b) a strict embargo against the forwardance of export shipments from this country to the United States has existed since the first week of December, 1917.

"The reasons for the embargo are too well known to need comment here, while its serious effect upon the Canadian export trade must be quite obvious.

"In addition to these disadvantages the Allied governments have commandeered all the space in vessels plying between the Atlantic seaboard and England, and they have also taken the steamers belonging to the lines which took care of our Australasian and South African shipments. As a result, we are now confronted with great difficulties in the matter of getting goods to and away from the seaboard, but we are hopeful that any change in the situation will be in the direction of amelioration of these perplexing conditions."

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the month ended January 31st, 1918:—

Penn Canadian Mine, 62,858; Right-of-Way Mine, 103,085; Beaver Mines, 79,971; McKinley-Darragh-Savage Mines, 84,211; Hudson Bay Mine, 64,942; Kerr Lake Mine, 59,774; O'Brien Mine, 258,807; Coniagas Mines, 261,000; La Rose Mines, 238,352; Tretheway Mines, 140,709; Temiskaming Mining Company, 133,046; Aladdin Cobalt Mines, 119,200; Dominion Reduction Company, 583,300; Buffalo Mine, 727,955. Total, 2,917,210 pounds, or 1,458 tons.

MIDLAND LOAN AND SAVINGS COMPANY

The Midland Loan and Savings Company, which has its headquarters at Port Hope, Ontario, is another of the veteran loaning institutions in that province, having done business to the satisfaction of its clientele for the past forty-five years. Mr. William Henwood, the company's president, reported at the recent annual meeting earnings of the corporation of $41,298 for the past year, after deducting interest paid and reserved on deposits and debentures, cost of management, taxes, etc., and amounts written off. To this sum was added $18,974, the balance brought forward from 1916, making a total amount for distribution of $60,273. This amount was disposed of as follows: Dividend paid July 3rd, 1917, 4 per cent., $14,400; dividend payable January 2nd, 1918, $14,400; added to reserve fund, $10,000; and balance carried forward, $21,473; total, $60,273. Interest payments were satisfactory, being in excess of any previous year.

Mr. Walter J. Helm, who has been assistant manager of the company, has now been appointed manager. As Mr. Henwood stated in his address to the shareholders, Mr. Helm's twelve years' experience as assistant manager eminently qualifies him for this position.

TAXATION IN MANITOBA

Discussing, in his recent budget speech, the question of taxation, Hon. Edward Brown, provincial treasurer, said:—

"In advising the House as to ways and means for raising new revenue, I have no hesitation in saying that, in my opinion, the most equitable form of taxation is by way of income tax, and I would have no hesitation in recommending this course were it not for the fact that the Dominion government has resorted to this as a war measure, and we have been careful to avoid anything that would bring us into conflict with the Dominion under present conditions, as we think the Dominion should have the right-of-way for purposes of defense.

"You will recall that last session I made a specific declaration in favor of a direct levy on all the rateable property of the province rather than resorting to what might be called pin-pricking forms of indirect taxation. I have not changed my opinion since, but in view of the patriotic levy of two mills, no part of which has come into the revenues of the province, I have hesitated about further increasing this burden and have been looking in other directions for relief. However, on consideration of the matter from every angle, and after discussing the question fully with our supporters in the House, it has been determined that we will ask the legislature or authority to make a provincial levy of one mill, or 1-10 of 1 per cent., on all rateable property in the province under the title of 'Supplementary Revenue Taxation.'

"With respect to the levy for patriotic purposes of two mills, it is proposed to reduce this to 1½ mills, and to levy this for a period of six years if necessary. At the same time, the government is asking for authority to finance the Patriotic fund organization and the Red Cross by guarantee of overdrafts, issue of short-date treasury bills, or the issue of debentures of the province, the sum not to exceed the total amount of the levy in the six years, and to be absolutely retired out of the proceeds of the same.

"In view of the responsibility assumed by the administration in this connection it is deemed wise to provide for a representative of the government by way of an active member on the board of the Patriotic fund, and to further provide for the audit of its expenditures by the comptroller-general.

"The two levies just referred to will represent a total levy of 2½ mills a year, an increase of only half a mill, without interfering with the amount at the disposition of the Patriotic fund by their present levy of two mills.

"While providing for the major portion of the new revenue by way of a direct levy, it will, at the same time, be agreed that the entire burden should not fall on real estate, and that to tax amusements is a fair suggestion. A bill to this effect, is now before the law amendments committee, and will, I hope, be passed by the House in due course.

"In addition to these two bills already mentioned there will be brought down a measure providing for a tax on unoccupied lands in the province. However, the purpose of this measure will be rather to encourage settlement and production, than to raise revenue, and to demonstrate our sincerity in this connection the bill will exempt from this tax all lands whch are unfit for cultivation. No revenue is expected from this bill during the coming year as the tax will not necessarily be paid before the end of the fiscal year."

BASIS AND PRACTICE OF SCHEDULE RATING

Universal Mercantile Schedule Rating—Loss Situation Serious—Methods Used in Canada and United States

(Conclusion)

"The mercantile schedule of the Canadian Fire Underwriters' Association," continued Mr. John B. Laidlaw, of the Norwich Union Fire Insurance Society, in his recent address to the Vancouver Insurance Institute, "which has just been adopted in British Columbia, was formed about 15 years ago. The companies had been faced with a condition of abnormally heavy losses in Canada, and the loss ratio was about 100 per cent. of the income for two or three years, losing money steadily. The condition was becoming serious so it was necessary to revise the rates. At that time they were operating under a system of flat rating, that is, a tariff making one rate for brick and one for frame, and one for frame brick, veneered or metalled, etc., and different rates according to the business or manufacture carried on. Very little attention was paid to exposure. The towns were grouped into some five classes, but it did not enable them to make a proper distinction between one place and another. In order to deal with this, however, they would place extra rates upon certain classes of risks and on certain blocks of buildings in some cities or towns, such as a flat extra of 15 cents in certain cases, in others 25 cents, and in others 10 cents, so that every risk in that class or in that block would pay the same increased rate. The result was the consolidated antagonism of the public; but while they made much of cases where the individual risk seemed to be better than the average, where it was inferior to the average nothing was said about it. However, something had to be done, and I happened to be at that time chairman of the committee at Toronto that was trying to adjust the rates, and frequently discussed the problem with the late Mr. Kenney, manager of the Western Assurance Company, and with Mr. Simms, then secretary of the British-America. Visits were made to New York, Boston and different cities in the United States, and the matter talked over with various rating officers to see how they had handled such a situation and learned about the systems of rating they used. The universal mercantile schedule was also studied, it being the only real effort then made to deal with schedule rating. Every insurance man should read and study the universal mercantile schedule, for though it is not adopted here or anywhere to-day, it was the first effort, and it is really worth reading and studying by anyone who is going to be connected with the insurance business.

Schedule Discarded.

"As a result of that inquiry, the universal mercantile schedule was being discarded even then—it had been adopted in a few places. The great objection was that it worked on percentages. It was a schedule that ostensibly provided certain charges for certain conditions, and then there was a list of percentage additions or deductions, and you would have to add 5 per cent. or 2 per cent. or 10 per cent. to the sum of various items that made up the rate, or you would have to deduct 10 per cent. or 2 per cent. or 5 per cent. from it and the result was if you discussed with an assured how his rate was made up—and an insured always wants to know that—and you would explain it to him and he would say: 'I am charged 15 cents for an open stairway—that is costing me $150 a year—I can close that for $50.' You will say: 'Close that right away and you will get a reduction.' Instead, however, of the assured getting $150, this 15 cents reduction for the open stairway, there were percentages to be deducted for certain conditions and perhaps he would only get $50 instead of $150, and you could not explain that it wasn't a clever trick and sharp practice. Then, too, the difficulty of applying it. The manager of a rating bureau in Columbus, Ohio, said that he had a staff of clerks for the sole purpose of figuring out these alterations. Every time there was a little alteration in a risk, he had to hand it over to an arithmetical expert to figure the percentage additions and deductions. The result of that trip was a resolve for getting a schedule which would not require expert men to apply it, one that would be comparatively easy to explain to the public and also that our agents, managers and inspectors could quickly become familiar with. It was necessary to formulate a schedule that would meet the varying conditions and so was formed the mercantile schedule.

"The new schedule starts with a basic rate for each town, so many cents on the dollar, which is the rate for a standard brick building unoccupied and unexposed, and without special interior protection—that is to say—a three-story brick building with first-class roof, heated with hot water, without vertical openings unprotected, the area not exceeding 25 feet by 100 feet, and without exposure, that is, no building alongside or with independent walls parapeted 2 feet above the roof on each side, walls of standard thickness, 12 inches for the top story, 16 inches for the next story, and increasing four inches to the ground floor and with non-hazardous occupancy. That risk would rate at the basic rate, that is, in a town that is specified at 40 cents, it would rate at 40 cents. Then to that rate would be added extras for all the varying features of deficiencies. If finished in wood instead of plaster, if heated by stoves or by a furnace instead of hot water, if it is lighted with kerosene lamps, or occupied by a hazardous stock, or if a hazardous manufactory is carried on there, if exposed, or if it has wooden cornice or mansard roof—all such varying things are considered. Most men think his own risk is better than Tom Jones' across the street, but while he sees the good features he shuts his eyes to the defects. The purpose of the schedule is to take into consideration the details of construction and occupation, and fix a moderate charge for each feature, and when these are added up the result is the rate. Then in the schedule we allow for reductions if there be conditions better than the average, such as if the building be only one or two stories, a further reduction if there is no basement, and a further reduction if it has specially thick or double floors; another reduction if there are appliances on each floor to extinguish an incipient fire—if the stand pipe is carried up through the roof and a hose provided on the roof, so that the building can be protected in case of fire in an adjoining building, there is another reduction.

Every Item Discussed.

"There was a great deal of discussion among our own members when this schedule was proposed, and every individual item in the schedule was discussed at length. We tested the first schedule for a year by actual application, and then revised and changed it. When you begin to prepare a schedule you will say there is a building that has a shingle roof—that is worth at least 15 cents, and wooden ceilings, they are worth 10 cents, and there is a stove, 25 cents on for that, and so on. The rates soar high, and you have to revise the schedule by actual test of the various items. When the reports were read on the schedule, some said it would drive the business off the company's books, because the men whose rate was reduced would stay with us, while those whose rate was increased would go to the non-tariffs, and it would mean ruination, etc., and it had to stand the fire of fierce criticism.

Plan of Formulating a Schedule.

"Fifteen years ago there were not many fireproof buildings and they were only commencing to construct mill construction buildings for warehouses. We found that men were putting up new buildings, new warehouses, and decided to build substantially, but that as our system of rating did not quite fit the mill constructed buildings, we prepared a new schedule, and when prepared, one of the greatest difficulties was how to fix the rate on the risks which were not quite standard, and how we were going to deal with them in the way of co-insurance. After a great deal of discussion and testing, we hit upon the plan of formulating a schedule basing the rate for mill construction buildings on the same rate as the ordinary risk and charging for deficiencies. Then in the application of the co-insurance allowance, instead of it being 20 per cent. off the rate of a brick building and 15 per cent. off a frame building, we provided that if the mill construction building is of standard construction, that is to say, if the floors are completely cut off from one another, if there is an absence of combustible trim or finish in the building, and it is properly fitted with stairs and elevators in an outside brick tower so that a fire on one floor would burn a long time before it got to another floor, we would allow 55 per cent. off the schedule rate for co-insurance. On the other hand, we found a good many mill construction buildings which were only so-called mill construction buildings.

"They were in fact very much in the position of a man who will buy himself a heavy overcoat and gauntlets, and warm underclothing, and put them all on and go out on the wintry street in his bare feet. A good many people build mill construction buildings on that system. They have heavy walls and double floors, and then they will put a well hole in the centre or construct an open stairway or a chute and expect you to give them a low rate. They have merely built a good stove and the contents of such a building will be burned more thoroughly than in the ordinary joisted building. The latter will fall before it is half burned, and you may pick out $10,000 or salvage from the cellar, but the other will stand and everything in it will be consumed. We therefore provided that as the risk departs from the standard, we reduce the amount

allowed for co-insurance, so that if there is a 10 cent deficiency there will be only 50 per cent off, and if the deficiencies require a charge up from 16 to 25, it makes 75 per cent. off. And so on, until when the charges for deficiency amount to 55 cents, the risk is rated as an ordinary building. This has worked out very satisfactorily. Where the value is great it is most important to see that the good construction and fire preventive appliances which have been factors in the rate be maintained, and it is necessary to inspect these risks at least twice a year. You cannot rely on an inspection every year or two, it is necessary the same as in sprinklered risks, that they should be inspected twice a year.

Fireproof Buildings Burned.

"Fireproof buildings are rated practically on the same schedule, with the same idea of the necessity of reducing the allowance for co-insurance if the building departs from the standard. In the Baltimore conflagration and in the San Francisco conflagration—especially in that in Baltimore—a number of fireproof buildings burned—about a dozen—and the loss on them averaged 66 per cent., that average being brought down by a few low buildings which escaped the hot blast of the conflagration, while in the large buildings, ten stories high, the loss ran in several cases to 80 per cent. of the value. If a man says to you: 'I don't need to carry much insurance, I think it unreasonable for you to ask me to carry insurance to 80 per cent. of the value,' you can tell him what has actually happened in city conflagrations. You might look from the street and perhaps not think the building was badly damaged, but the interior trim would be burned out and the elevators and stairways a mass of twisted iron, and in some cases it costs over $100,000 to tear out the debris, to chip out the wall, to insert the new trim, new wiring, new plastering, etc., to merely get ready to repair the buildings. Many owners of buildings forget that buildings must be repaired at present-day prices and they should insure their buildings on the basis of what they would cost to build to-day, less a proper depreciation for wear and tear. Many buildings which have been kept in good order are worth to-day considerably more than they cost to build 15 or 20 years ago and they should be insured on their present-day value.

"Now the experience we have had," said Mr. Laidlaw in conclusion, "emphasizes the advisability of having a schedule based as is that of the Canadian Fire Underwriters' Association on flat charges rather than on percentages. It enables an agent to explain to his client how his rate was arrived at, and we find that the antagonism between the insured and the companies has been greatly removed by that very fact. Under it we are charging higher rates where hazards exist, and lower rates where they do not, or have been safeguarded. Further than that, every insurance agent becomes an active agent for improvement of risk and fire prevention. It is not necessary to have an expert rating officer of the board, but this schedule is not so intricate that it cannot be readily understood, and if an insured complains of his rate to an agent, he can point out to a half-dozen things around the store by which the insured can obtain a reduction in rate, and thus there is the possibility of better business. He will reduce the risk and we will reduce the rate. The fire insurance companies are vitally interested in the reduction of hazards and so are the insured. If it were not that these reductions in hazards were constantly being made, the companies would not hardly be able to carry the ever increasing liability in congested centres and it would be insured at very much higher rates than those charged to-day.

"In regard to the adoption of this schedule, it has been tested and applied in Toronto, Hamilton, London, Montreal, Quebec, Winnipeg, Calgary, Edmonton, Regina, Saskatoon and the other cities and towns of Canada, east of the Rockies. The same principle applies in regard to this as in the individual risk. If a man feels he is being rated on the same basis as his competitors in other cities, he will say: 'That is as much as I can expect.'"

The court of directors of the Bank of British North America have resolved to declare, subject to audit, at the meeting of proprietors, to be held on March 5th, a dividend, payable April 5th, of 40 shillings per share, less income tax, being at the rate of 8 per cent. per annum, and carrying forward about £30,000 to the new account.

EARNING POWER TABLE

Illustrating the earning powers of the road, Mr. D. B. Hanna, third vice-president of the Canadian Northern Railway, gave at the stock arbitration hearing at Toronto this week the following as the revenue per ton per mile of freight moved by that railway since 1903:—

1903	.786	of a cent.
1904	.819	" "
1905	.793	" "
1906	.810	" "
1907	.873	" "
1908	.779	" "
1909	.736	" "
1910	.734	" "
1911	.849	" "
1912	.758	" "
1913	.772	" "
1914	.749	" "
1915	.831	" "
1916	.679	" "
1917	.688	" "

No Dividends Paid Yet.

"Has your company ever been in a position to pay dividends since 1898?" asked Mr. Tilley. Mr. Hanna replied that at no time has the company thought of paying dividends. All the surplus on improvements and betterments on the system had been used.

NORTHERN LIFE ASSURANCE COMPANY

Twenty-one years old, the Northern Life Assurance Company of Canada was able to present at its annual meeting a financial statement which in many respects was the best in the company's history. This corporation has its headquarters at London, Ontario. It is one of the few of our insurance corporations which boasts of a motto which, in this case, is "Faith Kept Enriches." That is the keynote of the policy of the Northern Life. The results of that policy are, perhaps, best illustrated in the following table, which shows the company's progress since its inception, the figures being taken from government reports:—

Year.	Net premium income.	Total. income.	Total assets.	Reserve.	Insurance in force.
1897	$ 4,612	$ 68,893	$ 138,430	$ 8,469	$ 354,000
1900	57,425	70,315	253,894	85,099	2,065,200
1903	117,825	131,169	404,412	241,639	3,586,160
1906	158,900	229,549	742,178	488,257	5,039,674
1909	214,971	408,875	1,276,798	812,916	6,399,724
1912	309,869	403,899	1,810,228	1,270,214	9,007,182
1915	379,003	513,935	2,531,028	1,857,704	10,401,232
1917	451,889	630,443	3,090,241	2,232,442	12,435,227

The company has a strong directorate and an excellent executive staff as follows: President—T. H. Purdom, K.C., London. Vice-presidents—W. S. Calvert, Toronto; John Ferguson, London. Directors—Matthew Wilson, K.C., Chatham; John Purdom, London; Charles Jenkins, Petrolea; N. H. Stevens, Chatham; John Milne, London; M. McGugan, Strathroy. Officers—W. G. Fitzgerald, B.A., A.I.A., actuary; R. C. Macknight, treasurer; J. M. Fernley, superintendent of agencies east; J. Wilson Purdom, secretary; Cl. T. Campbell, M.D., medical referee; and J. W. Glenwright, superintendent of agencies west.

During the past year the company was able to increase its insurance in force to the extent of $1,248,651. There was added to the reserve fund $179,044, which fund now amounts to $2,232,442. The total assets were increased $267,789, and amount to $3,090,240. The paid-up capital stock is $489,877, which, added to the excess of assets over all liabilities, $72,894, jointly amount to the sum of $562,772. This constitutes a substantial security to the policyholder, and is in addition to the reserve fund. The business income during the year was $630,442, being $73,190 greater than the previous year. The actual business income exceeded the expenditures by the sum of $176,618. The sum paid to policyholders amounted to $201,866.

All the diplomatic representatives at Petrograd of the fourteen allied countries and six neutrals have protested against the repudiation by the Bolsheviki government of the national debt, and also against the decree respecting the confiscation of property. They have declared that these edicts have no value, so far as their nations are concerned, and they reserve the right to claim damages.

PUBLICATIONS RECEIVED

Banking.—January issue of "The Home Bank Monthly." Issued by the Home Bank of Canada, Toronto.

Security Record.—Folder issued by A. E. Ames and Company, Union Bank Building, Toronto, for keeping records of securities. A very useful publication.

Foreign Exchange.—Knowledge of foreign exchange used to be regarded as something of a luxury. It is to-day, not far from being a necessity. A clear-cut, definite description of foreign exchange and of the underlying and unchanging principles on which it works is afforded in a new and excellent volume on the subject. It describes foreign exchange conditions as they exist to-day. The question of import and export credits is fully explained by means of typical case illustrations, and documents in actual use are reproduced. New York's position, present and future, as a world money market is thoroughly discussed, together with the more recent developments arising out of war conditions and modifications of the federal reserve system. A valuable appendix outlines the monetary systems of the principal countries of the world, and contains tables which explain the process of converting foreign currency into that of the United States and vice versa.

"Foreign Exchange Explained." By Franklin T. Escher, special lecturer on foreign exchange at New York University and the American Institute of Banking (Columbia University extension courses). Published by the Macmillan Company of Canada, St. Martin's House, Toronto. Price, $1.25.

GOLD FOR CANADA

It appears that the deputation of Canadian bankers which visited Washington last fall with regard to the release of gold for Canada, asked for $50,000,000, but obtained a promise for only $25,000,000. The president of the Canadian Bankers' Association, referring to this matter at the annual meeting last fall, said:—

"The successful mission to Washington in connection with the United States gold embargo is also gratifying. While our application for the release of $50,000,000 was not entertained, I feel confident that the amount secured, $25,000,000, will enable us to stabilize exchange rates; but should it not, the door is left open for a further appeal by the action of the Federal Reserve Board in suggesting that a committee of three Canadian bankers be appointed to confer with them in the event of further requirements."

He also made a special statement at the Bankers' Association meeting in regard to this matter. He recalled that the confidential committee of the association accompanied by two of the honorary presidents, went to Washington for the purpose of procuring a license to import gold to correct the abnormal adverse exchange rate then prevailing, with the following results:—

1. That the Canadian banks be allowed to import gold from the United States as follows: In November, $10,000,000; in December, $10,000,000; in January, $5,000,000.
2. That the Canadian banks may receive and ship to Canada all gold earmarked at the date of the embargo;
3. That gold coin equal to the mined gold shipped from Canada to the United States may be shipped to Canada;
4. That the president of the Canadian Bankers' Association shall signify to the Federal Reserve Board which banks in Canada are entitled to ship gold under Section 1 above.

The Federal Reserve Board in addition suggested that a committee of Canadian bankers be formed to confer with their board from time to time regarding the finance of the war as it affects the two countries.

The following committee was appointed in pursuance of the suggestion of the Federal Reserve Board: Mr. E. L. Pease, Sir Frederick Williams-Taylor and Sir John Aird. It was resolved that it would also be the duty of this committee to take such steps from time to time as might be necessary to stabilize exchange either by the importation, for deposit in the central gold reserves, or export of the whole or any part of the $25,000,000 above mentioned, it being understood that the respective banks will place at the disposal of the committee for import or export the part of the $25,000,000 assigned to each bank on the basis of paid-up capital.

HOW OUR RAILROADS ARE HANDLING FREIGHT

The Canadian Pacific Railway recently diverted by way of the Soo Line one thousand cars of freight so as to relieve the main line of the company along the north shore of Lake Superior. These cars passed south from Winnipeg to Minneapolis and by way of Sault Ste. Marie into Ontario. They consisted chiefly of grain for domestic consumption in Canada.

One hundred cars of freight per day are being diverted from the Canadian Pacific Railway at Quebec and travelling by way of the National Transcontinental to Halifax. While there is no saving in mileage, this, in the interest of the country, relieves the Canadian Pacific Railway main line to St. John for classes of export freight more urgently required there.

In Toronto an arrangement was successfully carried out whereby one hundred and twenty cars of freight eastbound for Montreal were turned over from the Canadian Pacific Railway to the Canadian Northern Railway every day.

The Grand Trunk during the winter season has been diverting one hundred and fifty to two hundred cars of coal per day to the Canadian Pacific Railway and Toronto, Hamilton and Buffalo in order to lessen the congestion on the Grand Trunk from the Niagara frontier to Toronto and other points.

The Grand Trunk has also diverted fifty cars per day to the Canadian Northern Railway at Toronto. In Western Canada the Canadian Northern has on several occasions transferred surplus traffic to the sister railways in the West.

The gold monetary stock (coin and bullion used as money) in the United States on November 1, 1917, is estimated in Secretary McAdoo's annual report at $3,041,500,000. The increase in the past 10 months has been $174,500,000, and in the past three years $1,236,500,000. In five years the portion of the world's gold monetary stock held by the United States has increased from approximately one-fifth to more than one-third.

THE DOMINION LIFE
ASSURANCE COMPANY

ESTABLISHED 1889

DETAILS FROM THE 29th ANNUAL REPORT

ASSETS—4,677,876.16, an increase of $300,000.00 over the preceding year.

SURPLUS—$1,029,111.85. This amount represents the excess of the Assets over the Reserves, contingency funds and all other liabilities.

POLICYHOLDERS' RESERVE—$3,357,025.00, Computed on a basis even more stringent than that required by the Government.

BUSINESS IN FORCE—$22,271,831.00. An increase over the preceding year of three millions.

SIGNIFICANT RATIOS

MORTALITY RATE, including all war claims, only 62% of that expected by Actuarial Tables.

INTEREST RATE—7.87%, a remarkably fine rate in view of the Company's large holdings of Government Bonds.

THE RATIO OF SURPLUS TO LIABILITIES was again the highest of any Company in Canada. This ratio is of the greatest importance, indicating as it does the two essentials—Strength and Earning Power.

A copy of the full Report will be mailed anyone on request.

HEAD OFFICE, - WATERLOO, ONTARIO

The Northern Life Assurance Company
of Canada

Has found 1917 to be a year of

SPLENDID PROGRESS

As the following figures show

	1917	1912
Assets at 31st December	$3,090,241	$1,810,228
Income for year	630,443	403,899
Surplus, 31st December	72,895	52,353
Policies Issued and Revived	3,420,142	2,219,844
Insurance in force 31st December	12,435,227	9,007,182
Policy Reserves, 31st December	2,232,442	1,270,214
Paid to Policyholders	201,867	66,722

The Company is extending its organization, and is prepared to offer advantageous terms to competent producers.

A copy of the last Annual Report will be mailed on request.

By Order of the Board.
R. NEILSON,
Assistant-Secretary.

DEBENTURES FOR SALE

DEBENTURES FOR SALE

The Town of Shaunavon, Saskatchewan, has for immediate sale, a $10,000.00 issue of debentures, interest 7%, repayment on annuity basis; and the undersigned will receive bids for the same up to and including the 16th day of March, 1918. The right is reserved to refuse any or all bids. Full particulars of the Town's financial condition may be had from

F. G. HORSEY,
Town Clerk.

WINNIPEG ELECTRIC RAILWAY COMPANY

The net earnings of the Winnipeg Electric Railway for November, 1917, were $86,887, as compared with $101,632 for the corresponding month of 1916. Fixed charges were $60,157, against $58,854 in 1916. Net earnings from January 1, were $746,976, a decrease of $337,160; fixed charges were $674,214, against $652,874 in 1916.

WESTERN CANADA POWER COMPANY

The Western Canada Power Company reports for December operating revenues $38,410, an increase of 1.8 per cent.; net earnings of $30,770, an increase of 22.1 per cent. Twelve months' operating revenues $450,161, an increase of 20 per cent.; net earnings of $332,194, representing an increase of 28.1 per cent.

RITZ-CARLTON HOTEL

At the annual meeting of the Ritz-Carlton Hotel Company, of Montreal, held at the hotel on February 13th, the directors' report showed that there had been an increase in the number of guests during the year. The increase had not been as great as hoped for owing to the fact that many reservations were cancelled on account of the entry of the United States into the war.

BRITISH COLUMBIA SALMON FISHERIES

No New Licenses for Salmon Canneries to be Granted This Year

The following official statement with regard to the salmon fisheries of British Columbia has been issued by the minister of the naval service:—

"After a conference with his officials with regard to the regulations and policy to govern the salmon fisheries in District No. 2, British Columbia, during which the whole matter was thoroughly considered, Colonel Ballantyne, minister of the naval service, reached the following decision:—

No More Licenses.

"1. That no licenses for salmon canneries in addition to those already authorized will be granted this year. This decision was reached because it was found that the existing canneries can more than take care of all the salmon that may be allowed to be caught. It is recognized that if the privilege is thus restored, those engaging in canning should be required to pay into the public treasury a fair proportion of their profits. As the system of accounting among the canners is so diversified, it is impossible now to determine what this shall be, but during the present year a satisfactory system of accounting, to be used by all the canners, will be worked out, and each will be required to give full and uniform returns to the department of the naval service of his operations so that after this season an adequate license fee can be required.

"2. That, as the runs of salmon and the conditions on the spawning-beds do not warrant a greater amount of fishing than is now permitted, no licenses for additional fishing privileges will be authorized this year. These two decisions do not apply entirely to the Queen Charlotte Islands, where the conditions are different from those now existing on the mainland.

Motor Boats Prohibited.

"3. That, as the evidence of the cannery managers, the canners and the fishermen, submitted to the special commission which last year investigated the salmon fisheries of this district, was nearly unanimously opposed to the use of motor boats in salmon fishing operations, such boats will not be allowed this year.

"4. That, to enable proper arrangements to be made for the using of gill net licenses independently of all canneries, licenses will be granted this year on a similar basis to last, but hereafter no attached licenses will be issued.

"5. That rigid enforcement of the fishery regulations will be carried out, and the protective force will be sufficiently enlarged to enable this to be done.

Application for Licenses.

"6. On his return to British Columbia in the next few days, the chief inspector will call together those applying for new licenses in different portions of the province, where such may be safely granted, and each applicant will be required, in the presence of the others, to show why he considers his application should be favored. Immediately following such investigation, a decision on the different applications will be reached by the chief inspector."

BRANDRAM-HENDERSON COMPANY'S REPORT

As a result of operations during the past year, Brandram-Henderson, Limited, one of our best-known industrial corporations, was able to improve its financial position in several ways and to increase the balance at the credit of profit and loss account to the extent of $63,000. The net profits for the year amounted to $221,429, which, with the balance of $349,465, carried forward from the previous year, gave a sum of $570,894 to the credit of the profit and loss account. Out of this sum the interest on bonds to September 30th was paid, and a reserve for interest accruing for October and November, also the dividend on the preferred stock paid and accrued. The sum of $7,500 was provided as a reserve for depreciation, and a further sum of $10,000 as a special reserve for depreciation by way of provision for possible contingencies. This is a commendable policy The sum of $29,100 was absorbed by the 3 per cent. dividend paid on the common stock in February last, and the sum of $7,062 to cover patriotic donations during the year. Owing to insufficient information from the authorities an inadequate sum was set aside a year ago for the first year's war tax, and in consequence it was necessary to provide at this time the sum of $31,917. The sum of $15,600 was applied for sinking fund purposes, leaving a balance of $412,184.

An examination of the balance sheets of the past two years shows an increase in current liabilities. The explanation for this given by Mr. George Henderson, the company's president, at the annual meeting on Wednesday, was the greater volume of business transacted by the company, which necessitated larger stocks, and the higher cost of all raw materials.

The company's financial statement generally reflects an excellent position. Little criticism can be offered, except that, like so many other companies, the value of real estate buildings, plants, equipment, goodwill and patent rights, is entered among the assets in the balance sheet in a lump sum. While this is the practice of the majority of companies, we believe it will be found desirable for companies to separate these items in the balance sheet, attaching the value to each.

The Brandram-Henderson Company is doing not only a good business throughout Canada, but a satisfactory export trade in addition. One of the features of its trading last year was the rapidly increasing foreign business, which has justified the appointment of several additional foreign representatives, all of whom are reported to be doing well. In order satisfactorily to develop the company's British Columbia business it was found desirable to establish a depot in Vancouver, and, owing to the strong sentiment in favor of provincial organizations, a separate charter was secured to do business in the name of Brandram-Henderson of British Columbia, Limited.

Mr. J. M. C. Muir is the secretary of Brandram-Henderson, Limited.

WATERLOO COUNTY LOAN AND SAVINGS COMPANY

An honest endeavor to invest its funds on safe lines and to keep the company in a good liquid position has been the aim of the Waterloo County Loan and Savings Company. This policy is reflected in the fifth annual statement, which shows a good position. At the end of the year, the company's government and municipal securities, together with cash, considerably exceeded its ordinary deposits. An effort will be made to maintain this position, and the company will, therefore, take advantage of the present good prices to accumulate a large amount of bonds to hold for years to come. As a result of its operations last year, after providing for interest on deposits and debentures, and defraying the expenses of management, including war taxes, municipal and provincial taxes, the balance available for distribution was as follows: Balance brought forward from 1916, $1,878; premium on stock, $646; net profits for the year, $35,379; total, $37,903. This amount was disposed of as follows: Two half-yearly dividends, numbers 7 and 8, at the rate of 6 per cent. per annum, $24,153; donated to Patriotic and Red Cross funds, $525; written off office premises, $500; transferred to reserve fund, $10,000; and transferred to contingent fund, $1,500, leaving a balance carried forward of $1,225. The profits equalled 8.78 on the capital.

Referring at the annual meeting to the company's business, Mr. Thomas Hilliard, president, stated that, in the handling of money, the directors of an institution had a public trust to protect, and it was essential that all investments should be made with a view to wise and sound policy. This policy had been carried out in connection with the business of the Waterloo County Loan and Savings Company, and it was evident by the satisfactory growth of the business that the people in the community had confidence in the company.

Mr. E. F. Seagram, vice-president, referring to the company's investments, said: "We feel that, while it is necessary to make as good profits as possible for the business, that the shareholders would prefer to know that absolute security and safety was aimed at, rather than too high an interest rate."

Mr. P. V. Wilson, the manager, dealt in detail with the various items of the financial statement. He stated that very few mortgage loans were made during the past year, the few that were handled being located in Kitchener and Toronto. Of the company's mortgage loans, amounting to $590,000, the average of each was slightly over $3,000, the company holding nearly 200 mortgages.

The Ontario Loan and Debenture Co.

The Forty-seventh Annual General Meeting of the Shareholders of this Company was held on Wednesday, 13th instant, at the Company's Offices, London, Ontario.

The chair having been taken by the President, Mr. John McClary, the Manager, Mr. A. M. Smart, who acted as Secretary, read the notice calling the meeting and the minutes of the last Annual Meeting which, upon motion, were confirmed.

The Annual Report was then presented, as follows:—

London, Canada, 28th January, 1918.

To the Shareholders:

Under the altered conditions prevailing throughout the past year, owing to the war, it affords the Directors much pleasure to present their Annual Report, which they are confident will be entirely satisfactory to the Shareholders.

The demand for loans on mortgage has not been heavy, and investments have turned toward the higher class of Government and Municipal Bonds which afford a fairly good return. The increase in your Company's holding of such Bonds is mainly owing to participation in the recent Dominion War Loans.

The foreign trade of Canada again discloses a greatly increased favorable balance and the high prices for agricultural products have doubtless overcome the farmer's augmented cost of production and living.

As detailed in the Revenue Account herewith, after provision for possible losses and contingencies, the payment of Provincial and Municipal Taxes, Interest, Expenses and Charges, your Company's

Net earnings for the year 1917 are		$268,290.86
Balance brough forward from previous year		53,593.56
From this Total available		$321,884.42
Dividends (Quarterly) at the rate of 9 per cent. per annum have been paid	$157,500.00	
Transferred to the Reserve Fund	100,000.00	
		$257,500.00
Balance		$ 64,384.42
Grant to the Canadian Patriotic and Red Cross Fund.	$ 3,000.00	
Grant to the British Red Cross Fund	500.00	
Dominion Government Income War Tax	10,180.87	
		13,680.87
Balance carried forward		$ 50,703.55

A resolution approving of the above grants to Patriotic and Red Cross Funds will be submitted for your approval.

The transactions of the Company throughout the year have been duly audited and the Auditors' certificate is attached to the Financial Statement which is presented herewith.

An amendment to By-law No. 22 will be submitted whereby it is proposed to reduce the number of Directors from eight to seven.

Your Directors deeply deplore the loss sustained by the death of their esteemed colleague, Mr. Thomas P. McCormick.

The care and attention devoted to your Company's affairs by your Agents in Great Britain is most cordially acknowledged.

Your Directors also wish to bear testimony to the efficiency with which the Officials and Staff of the Company have discharged their arduous duties.

All of which is respectfully submitted.

JOHN McCLARY, President.

A. M. SMART, Manager.

To the Shareholders of The Ontario Loan and Debenture Company:

We hereby certify that we have audited the books and accounts of The Ontario Loan and Debenture Company for the year 1917, including a monthly cash audit and the verification of the entries and balances in all the Company's books, and we find the whole correct. We have also examined the securities and find them in order.

All our requirements as Auditors have been complied with and in our opinion the above statements are properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs, as shown by its books.

F. G. JEWELL, C.A.,
J. F. KERN, } Auditors.
London, Ontario, 28th January, 1918.

The President, in moving the adoption of the report, said, in part:

The Annual Statement speaks for itself and cannot fail to be entirely satisfactory to the Shareholders as it is to the Directors. Your Company was never in a stronger position than it is to-day. The investments have been gone over with the greatest care and are undoubtedly full value for the amounts at which they stand in the Balance Sheet.

For the past six years we have been able to add $100,000 each year to our Reserve Fund until it now stands at over 110 per cent. of the paid-up capital. This fund has been gradually and patiently built up until, with the unappropriated profits, it has now reached $2,000,000, a staunch bulwark to protect our shares against any adverse conditions that may obtain during the war or in consequence of it.

It affords me much pleasure, seconded by the Vice-President, to move the adoption of the Annual Report.

The Vice-President, Mr. A. M. Smart, in seconding the adoption of the Report,

Referred to what the President had said regarding the strength of the Company's position and remarked that during the whole period of the war cash reserves had been maintained at a comparatively high figure. This, of course, did not produce high profits, but he felt sure it was a policy of which the Shareholders would approve.

Our practice had been to secure the larger proportion of our Debenture moneys in Scotland, but of late British Government Bonds were offered there to yield such returns that we did not feel we should offer rates calculated to attract money of which there is such need for the prosecution of the war. Notwithstanding many of our old debenture holders have renewed with us our sterling debentures show a considerable reduction in amount. The compensating advantage to us is the consequent increase in the percentage of our assets as compared with our liabilities. Our assets are now more than double our total liabilities to the public. In other words, you have $2 in assets to meet each $1 you are under contract to repay.

Indicating the soundness of the Company's assets is the fact that at the end of the year the total interest overdue on all the Company's investments was 25 per cent. less than the amount at the end of 1916. Fully one-fifth of this had already been received.

The Report was then adopted unanimously.

The Scrutineers were then appointed and the election of Directors proceeded with, Messrs. John McClary, A. M. Smart, Thomas H. Smallman, Lieut.-Col. William M. Gartshore, John M. Dillon, M. Masuret and C. R. Somerville being re-elected for the ensuing year.

It was moved by Mr. A. B. Greer, seconded by Prof. J. H. Bowman, that Messrs. Frank G. Jewell, C.A., and John F. Kern be and are hereby re-elected Auditors for the Company. Carried.

On adjournment of the meeting and at a meeting of the Board of Directors held subsequently, Mr. John McClary was re-elected President, and Mr. A. M. Smart, Vice-President of the Company.

TRAVELLERS' LIFE ASSURANCE OF CANADA

One of our youngest insurance companies, the Travellers' Life Assurance Company of Canada, has made excellent progress during a comparatively short career. The company has the benefit of an experienced president who is not a stranger to the life insurance business. Its directorate is composed of well-known business and financial men, while its secretary, Mr. R. P. Earle, A.I.A., A.A.S., brings to his executive work the knowledge of a capable actuary. The medical department of the company, which is naturally one of the most important factors in the success of a life insurance corporation, is under the care of Dr. A. E. Garrow. While slightly handicapped during the early part of its existence by various staff changes, the company has been able to overcome that check to its growth, and at the end of 1917, had in force net insurance of $4,404,016. This compares with business of $2,046,552 on its books in 1914. Similar growth is noticed in the insurance issued and revived, in comparing the annual reports of the past four years. In 1914, the amount was $1,394,505, and last year $1,726,430. During the past three years the net premium income has increased from $75,256 to $151,966. The total assets have also made a substantial gain from $237,599 to $422,552. These figures illustrate at a glance the satisfactory progress which the company has made.

Dealing particularly with last year's results, the net premium income of $151,966 shows an increase of 23.66 per cent. over the previous year. The insurance issued and revived amounting to $1,726,430, was the largest total in the company's history. The same remark applies to its net insurance in force amounting at the end of 1917 to $4,404,016. The average amount of the policies written by the company is $1,400 and the average annual premium per $1,000 of net insurance in force is $37.50. The company's assets have almost doubled during the past three years and they increased 21.54 per cent. during 1917. The average interest earned on investments, including cash in banks, was 6.58 per cent.

DOMINION SAVINGS AND INVESTMENT SOCIETY

With assets more than double the amount of liabilities and a reserve fund which alone is almost 25 per cent. of the total liabilities to the public, the Dominion Savings and Investment Society is building up a position which will fittingly celebrate its semi-centenary five years hence. Mr. T. H. Purdom, the company's president and a well-known citizen of London, Ontario, where the company's head office is situated, presented the forty-fifth annual report at the shareholders' meeting last week. The net profits for the year amounted to $58,125. The balance at the credit of the contingent account was $2,541, making together a sum of $60,666. This provided for the payment of two half-yearly dividends, at the rate of 5 per cent. per annum, amounting to $46,741, the addition of $10,000 to the reserve fund which now totals $260,000, leaving the contingent account a balance of $3,925.

The financial statement is signed by Mr. Nathaniel Mills, the company's capable manager. It shows liabilities to the public of $1,112,672. Savings bank deposits account for $761,378 of that sum; currency debentures and coupons due, $178,351; and sterling debentures and sterling debenture coupons (interest accrued but not due), $172,942. The liabilities to the shareholders, amounting to $2,334,803, are as follow: Permanent stock, $934,300; permanent stock dividend, payable January 2nd, 1918, $23,357; accumulating stock, $95; accumulating stock dividends, $453; reserve fund, $260,000; and contingent account, $3,925.

The company's assets of $2,334,803, are made up entirely of the cash value of mortgage and other securities, and cash in banks and office. The former item accounts for $2,297,941 and the cash for $36,862. Judging by the company's financial statement, the Dominion Savings and Investment Society is in excellent condition, and is making good progress. The directors of the company are as follow: Messrs. T. H. Purdom, K.C., London, president; John Ferguson, London, vice-president; W. J. McMurtry, Samuel Wright, John Purdom, John Milne and managing director, Nathaniel Mills.

Merchants Casualty Co.

Head Office: Winnipeg, Man.

The most progressive company in Canada. Operating under the supervision of the Dominion and Provincial Insurance Departments. Embracing the entire Dominion of Canada.

February 7	$ 493,600	$ 634,600	+ $141,000
February 14	602,000	688,000	+ 86,000

BRITISH MARKET FOR CANADIAN SECURITIES

Discussing the British market for Canadian securities in its issue of January 31st, the Canadian Gazette, London, Eng., says:—

"In Dominion issues the 3½ per cents. (1909-34) are 1¼ up; in provincial bonds British Columbia 4½ per cents. (1914) are 1¼ better, and Ontario 3½ per cents. (1946) are 1 higher, but in municipal loans Quebec 4 per cents. (1958) are 1¼ down at 70¼. Railway stocks have been somewhat affected by the rate question, and Canadian Pacific shares are 1¼ down, at 159¼, although Grand Trunk stocks only showed fractional changes. Speculative buying of Canadian Northern income debenture stock, with the result of a substantial advance—4 points to 43½—in the price is attributed to market operators having taken up the view that the Dominion government, as now owners of the Canadian Northern Railway, will have to provide for the principal of that stock when it becomes due in 1930."

In the miscellaneous section Hudson's Bay shares have been steady while amongst those shares of a commercial character Cockshutt Plow preference, of which we hear good accounts, have jumped up 4 to 74.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4c. per word, Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

THE STORY OF A YOUNG FINANCIAL MAN'S SUCCESS.—A financial man, thirty-three years of age, came to our office four years ago to take up a new line of business—a line against which he had been prejudiced, but which he knew carried great rewards for the successful. His average commissions this year will be over $5,000.00, and he has built up a future income of over $3,000.00 a year on business already written. We are enlarging our organization to prepare for an enormous expansion of business during the next few years. We have positions for two good men with successful records. This offer will be open during the next week. Only applicants of unquestioned integrity and with the highest references will be considered. W. A. Peace, Manager Toronto Branch, Imperial Life Assurance Company, 20 Victoria Street, Toronto.

MOOSE JAW RENTAL AGENTS.—The Ralph Manley Agency, Limited, Walter Scott Block, Moose Jaw, handle the renting of Moose Jaw Improved City Property. Their facilities permit them to rent and re-rent property as well as looking after collections and any necessary repairs. Established 1908. Correspondence solicited.

CAPABLE OFFICE ASSISTANT DESIRES POSITION.—An office assistant, lady, desires position in Toronto. Experienced; is careful and accurate; a good writer; can be trusted with confidential or secretarial work, and can furnish first-class references. Box 147, care of *The Monetary Times*, Toronto.

CHARTERED ACCOUNTANT, with successful executive and secretarial experience and thorough familiarity with manufacturers and cost accounts, is open for position as chief accountant for industrial concern or with public accountant. Box 149, *Monetary Times*, Toronto.

Woodbridge, Ont., citizens have formed a board of trade to secure industries for the municipality, and the first officers are: President, Dr. P. D. McLean; vice-president, David Norton; secretary, H. McLaughton; treasurer, John G. Hallett.

SMART-WOODS, LIMITED

The financial statement of Smart-Woods, Limited, for the year ended December 31 last shows net earnings of $770,816, compared with $516,190 earned in 1916. Bond interest took $29,250, war tax $110,730, deferred charges $60,014, Patriotic Fund $8,500, reserve for bad debts $20,000, preferred dividends $108,185 and common dividends $120,246, leaving a net surplus for the year of $313,890, compared with $150,209 in 1916.

HURON AND ERIE MORTGAGE CORPORATION

The profits of the Huron and Erie Mortgage Corporation, of London, Ontario, last year were $450,191, earned on paid-up capital stock of $2,500,000. These profits were almost $10,000 greater than those of the previous year, but the increase was largely absorbed by more generous gifts for war purposes and by additional taxes which the corporation was called upon to pay. The total amount paid to shareholders in dividends and the amounts added to reserve fund and undivided profits were, therefore, only slightly more than those of 1916. The company's financial statement indicates a maintenance of the strong position it has held for so many years. The shareholders were paid dividends at the rate of 12 per cent. Pension funds, taxes, patriotic funds and branch extension fund absorbed approximately $50,000. A further appropriation of $100,000 was made to the reserve fund, which now amounts to $3,100,000, or 124 per cent. of the company's paid-up capital—an exceptionally favorable position in that respect. The corporation has no real estate on hand other than office premises, all properties which have come into the possession of the corporation by foreclosure, failure to obtain purchasers under power of sale, or otherwise, having been sold.

In presenting the directors' report at the recent annual meeting, Mr. T. G. Meredith, K.C., president, gave some interesting figures regarding the company's total mortgage investments, which at the end of the year amounted to $10,584,773, or $750,000 less than those of a year ago. In round figures, these investments are made up of nearly $7,000,000 of Ontario mortgages, about $1,000,000 of Manitoba, $2,500,000 of Saskatchewan, and $167,000 of Alberta. At the end of the year practically all the past due interest had been paid in Alberta, while in the other three provinces the arrears of interest were less than two-thirds of 1 per cent. of the amount invested, a splendid record. These $10,500,000 are represented by 4,378 mortgages, making an average loan of less than $2,500. Of these loans, the greater portion is secured by farm property, and the balance on productive properties (chiefly residential) in the larger cities of Ontario or in the city of Winnipeg. The values placed by the company's own inspectors upon the lands and premises forming the security total nearly $25,000,000, so that the loans average less than 45 per cent. of the inspectors' valuation.

Speaking generally, both in Ontario and in the western provinces, repayments on mortgages have been extraordinarily good—better, indeed, than in any year since the war. As the results show, the company has been repaid more money than, in reality, they cared to accept.

Discussing other items of the company's assets, Mr. Meredith pointed out that holdings of municipal, school district and rural telephone debentures decreased by over $200,000. Here, again, the record of payment, both of principal and interest, is highly satisfactory. The only increase in the list is shown under the heading of government bonds, the holdings of which have grown from $716,000 to almost double that figure.

Major Hume Cronyn, M.P., is first vice-president and general manager of the company, which is one of the oldest and strongest mortgage corporations in Canada. Major Cronyn is known throughout the country as one of the foremost loaning authorities, and has contributed largely to the marked success of the Huron and Erie Mortgage Corporation. With Mr. Meredith as president, he is supported also by the following directorate: F. E. Leonard, second vice-president; George T. Brown, F. R. Eccles, M.D., LL.D., Robt. Fox, H. E. Gates, A. H. M. Graydon and Philip Pocock. Mr. Aylsworth is the company's secretary.

P. V. WILSON, Manager.

To the President, Directors and Shareholders of The Waterloo County Loan and Savings Company.

Gentlemen,—We beg to report that we have made a regular monthly audit of the books of account and vouchers of your Company for the year ending 31st December, 1917, and that we find the same correct and according to the statements herewith submitted.

In our opinion the balance sheet referred to in this report is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs as shown by its books.

Respectfully submitted,

J. M. SCULLY, F.C.A.,
J. SCULLY, } Auditors.

"MUTUAL" PROTECTION AGAINST DISABILITY AND DEATH

Many Policyholders fear that a time will come when, owing to permanent disability from illness or accident, they will be disqualified from earning an income and paying their premiums. The Mutual Life of Canada issues a Policy which not only waives further payment of premiums but provides a monthly income of $10.00 per thousand of insurance, should such a condition develop and be clearly proven. This is a Policy which affords protection to the full amount of the policy at death for the beneficiary and protection for the assured while helpless—Write for full particulars.

One of the most perfect Insurance Policies issued.

The Mutual Life Assurance Co. of Canada
Waterloo Ontario

THE UNAVOIDABLE "IF"

If a man were certain of living a specified time—IF he could foresee the future—perhaps he could do without Life Insurance. But the elements of uncertainty enters, and makes the best schemes of no account. It is this uncertainty that makes Life Insurance so invaluable. A Life Policy is the one certain way of providing for an uncertain future.

The Great-West Life Policies embody all the essentials of profitable Life Insurance. Low premium rates are charged—these premiums may be paid annually or otherwise, as suits the insured—the Policy conditions are liberal and clearly expressed, and the profit returns to Policyholders are so satisfactory that seldom does a participant fail to express both gratification and surprise at returns under his Policy.

Full particulars of suitable Policies will be mailed to any applicant.

NEW INCORPORATIONS

Two Million-Dollar Companies in British Columbia Have Received Charters

The largest companies incorporated during the past week were: East Sooke Mines, Limited (non-personal liability), $1,000,000, Victoria, B.C.; International Cordage Company, Limited, $1,000,000, Vancouver, B.C.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are provisional directors:—

Prince Rupert, B.C.—Fishermen's Club, Limited, $10,000.

Sylvan Lake, Alta.—The Armstrong Farming Company, Limited, $25,000.

Fort William, Ont.—Foxs, Limited, $40,000. N. Fox, B. Hollenberg, D. Hollenberg.

Taber, Alta.—Southern Alberta Grain Growers' Supply Company, Limited, $500,000.

Sarnia, Ont.—Manleys, Limited, $40,000; T. H. Manley, B. B. Manley, N. St. Clair Gurd.

Brantford, Ont.—Waddell's Limited, $100,000; J. Harley, A. Manson Harley, G. H. Harley.

Val Morin, Que.—Highland Farms, Limited, $20,000; C. L. Buchanan, T. H. Harper, G. E. Blaine.

Thetford Mines, Que.—J. E. Marcoux, Limitée, $20,000; J. E. Marcoux, C. N. Delage, E. Lacerte.

Lennoxville, Que.—Johnson and Shardlow, Limited, $100,000; F. W. Johnson, J. W. Shardlow, J. P. Wells.

Winnipeg, Man.—The Frontier Lumber Company, Limited, $50,000; E. B. Eadie, R. Siderfin, M. McNicol.

Belleville, Ont.—Ontario Business College, Limited, $30,000. J. W. Johnson, M. S. Johnson, W. P. S. Johnson.

Victoria, B.C.—East Sooke Mines, Limited (non-personal liability), $1,000,000. Queen Charlotte Spruce Company, Limited, $500,000.

Vancouver, B.C.—Central British Columbia Colonization Company, Limited, $45,000. Seaside Lumber Company, Limited, $12,000. Service Lumber Company, Limited, $10,000. International Cordage Company, Limited, $1,000,000. The Bendickson Logging Company, Limited, $25,000. Crawston Machinery Company, Limited, $10,000. Overseas Loggers, Limited, $100,000. Sayward Logging Company, Limited, $10,000.

Toronto, Ont.—Rob Roy Mills, Limited, $250,000; W. A. McGowan, R. S. McGowan, C. R. McGowan. Electric Insulation and Varnish Company, Limited, $60,000; J. Whitfield, J. G. Shaw, J. Montgomery. Edwards and Wright, Limited (no personal liability), $100,000; W. H. Edwards, E. W. Wright, W. Stewart. De Foe Wilson, Limited, $40,000; W. N. DeFoe, H. B. Tisdale, M. N. DeFoe. Union Garage and Motors, Limited, $40,000; D. I. Grant, M. MacDonald, E. Smily. Walker and Son, Limited, $75,000; W. J. Shaw, H. G. Jones, W. I. Walker.

Montreal, Que.—La Compagnie Laurin and Preville, Limitée, $20,000; E. Laurin, J. A. Preville, J. O. Desy. East End Garage, Limited, $500,000; F. Callaghan, F. X. Biron, A. Tracey. Old England, Limited, $10,000; I. Greenberg, S. Garmiase, M. Rosen. Campbells' Florists, Incorporated, $90,000; C. M. Holt, L. Gosselin, P. E. Lanctot. Montreal Pottery, Limited, $100,000; A. R. W. Plimsoll, R. Brodeur, R. Genest. Brodie's, Limited, $100,000; L. M. Smith, E. Jackson, L. Copping. British 5, 10, 15 and 25 Cents Store, $10,000; H. Weinfield, M. M. Sperber, J. Y. Fortier. Alderic Lefebre, Limited, $25,000; L. M. Smith, L. Jackson, L. Copping. Point St. Charles Hay Company, Limited, $30,000; L. M. Smith, C. Thomas, E. Jackson.

MORE ONTARIO BONDS

A syndicate consisting of the Dominion Securities Corporation, Wood, Gundy and Company, and A. E. Ames and Company, have completed negotiations for $3,000,000 Province of Ontario 6 per cent. 10-year bonds, the last $1,000,000 of which are now being offered.

CAPITAL TRUST CORPORATION

Although only five years old and confining itself to comparatively small operations, the Capital Trust Corporation, of Ottawa, is in excellent financial condition, judging by its latest annual statement. The net profits for the past year were $18,035, compared with $5,029 for the previous year. This is a commendable increase. The organization expenses, $2,701, were written off, and, with the balance from the previous year, the total remaining profit amounted to $27,234. The paid-up capital was increased by $33,866, and now amounts to $355,355. There has been a general and satisfactory increase in business in all departments of the company. The question of paying a dividend is under consideration.

The inventoried value of real estate, mortgages, stocks, bonds and debentures, etc., in the hands of the company as executors, trustees, guardians, agents, etc., at the end of the year was $783,649. In the estates, trustee and agency accounts, there was also the substantial sum of $62,655 cash on hand and in banks.

Mr. M. J. O'Brien, of Renfrew, Ont., is president of the company, the four vice-presidents being Hon. S. N. Parent, Ottawa; J. J. Lyons, Ottawa; R. P. Gough, Toronto; and E. A. Corrigan, Ottawa. The managing director is Mr. B. G. Connelly, and the assistant manager, Mr. E. T. B. Pennefather. In addition, there are sixteen other directors resident in various parts of the country.

ONTARIO LOAN AND DEBENTURE COMPANY

For the past six years, the Ontario Loan and Debenture Company, of London, Ont, has been able to add $100,000 each year to its reserve fund. That account now stands at over 110 per cent. of the paid-up capital. The fund, with the unappropriated profits, totals $2,000,000 and, as stated by Mr. John McClary, the president, at the annual meeting last week, it is a "staunch bulwark to protect our shares against any adverse conditions that may obtain during the war or in consequence of it." This is only one of many indications of the company's strong position. Mr. A. M. Smart, the manager and vice-president, pointed out that during the whole period of the war cash reserves had been maintained at a comparatively high figure. This does not produce high profits, but it is a policy of which all those who have at heart the company's best interests will approve. The corporation has an excellent record also in regard to its assets which are more than double the total liabilities to the public. In other words, there are over $2 in assets to meet each $1 the company is under contract to repay. The substantial nature of these assets is reflected in the fact that at the end of the year the total interest overdue on all the company's investments was 15 per cent. less than the amount at the end of 1916. Over one-fifth of this had already been received.

Discussing rising rates for money, Mr. Smart pointed out that the company's practice had been to secure the larger proportion of its debenture moneys in Scotland, but of late British government bonds were offered there to yield such returns that the directors did not feel they should offer rates calculated to attract money of which there is such need for the prosecution of the war. Notwithstanding this, many of the company's old debenture holders have renewed with the company, whose sterling debentures show a considerable reduction in amount. The compensating advantage to the corporation is the consequent increase in the percentage of its assets as compared with its liabilities.

Those interested in the Ontario Loan and Debenture Company, which has been doing business for 47 years, have every reason to be satisfied with the company's position and the results of the past year. This is due largely to the good work of the manager, Mr. A. M. Smart and to the active assistance of his directorate, headed by Mr. John McClary, as president. The company's net earnings for 1917 were $268,290 and the balance brought forward from the previous year $53,593. From this total of $321,884, dividends at the rate of 9 per cent. per annum were paid, absorbing $157,500, and transferred to the reserve fund was the sum of $100,000. A grant to Canadian Patriotic and Red Cross Fund of $3,000, to the British Red Cross Fund of $500 and the Dominion government income war tax of $10,180, accounted for $13,680, leaving a balance to be carried forward of $50,703.

INCOME TAX RETURNS DUE ON MARCH 31st

Review of the New Legislation Which is Now in Operation—List of Taxation Officers — Outline of the Information to be Given on the Tax Forms.

THE time for making returns under the income tax legislation has been extended from February 28th, the date fixed by the bill, to March 31st. This was officially announced on Monday. The change was necessary owing to the delay in the organization of the staff which will have charge of the collection of the taxes.

The income tax is a new departure in Canadian methods of raising money for federal purposes. In The Canadian Chartered Accountant, the official organ of the Dominion Association of Chartered Accountants, published at Toronto, Mr. R. Easton Burns, C.A., gives an excellent digest of the new income tax bill. He has presented the act, clause by clause, with such questions, comments and explanations by members of the House, during its consideration in committee, as will convey an intelligent idea of what was in the minds of the legislature, with special attention to the explanations of the minister of finance.

In his introduction Mr. Easton reminds us that the act affects all incorporated companies, associations, partnerships, trustees and persons, whether male or female, having an income of fifteen hundred dollars in the case of unmarried persons and widows or widowers without dependent children, and three thousand dollars in the case of all other persons.

Tax of Four per Cent.

There is a normal tax of 4 per cent. on the net earnings of all incorporated companies in excess of $3,000. Companies do not pay a supertax. Partnerships, as such, are not assessed, but each partner pays on his share of the net earnings of the partnership. Profits are assessable whether divided or distributed or not. The normal tax having been paid by a company an allowance is made to the shareholder of 4 per cent. on the dividends he receives.

In addition to the normal tax, there is a supertax on all incomes in excess of $6,000, varying from 2 per cent. on incomes between $6,000 and $10,000 to 25 per cent. on incomes exceeding $100,000. For the purpose of the supertax, the undistributed profits held by companies must be included in the returns made by the shareholders. The tax applies to incomes in 1917. In the case of companies which might be assessed for the year 1917, under the Business Profits War Tax Act, 1916, an assessment will be made under whichever act will produce the greater revenue for the government.

The operation of the act will be under the direction of the minister of finance, to whom considerable discretionary power is given. Returns must be made by all persons liable to be taxed on or before February 28th in each year, beginning in 1918. (This date has been changed to March 31st for the current year.) Every company must make a return of its shareholders and of dividends paid. The finance department will scrutinize these returns and compare the returns made by the shareholders.

All employers must make a return of their employees in receipt of sufficient income to render them liable to taxation.

Accumulated profits earned prior to the operation of the act are, in the opinion of the minister of finance, assessable as income for the year in which they are distributed to the shareholders or partners.

List of Tax Officers.

The following are the names and addresses of the inspectors of taxation at present appointed in Canada:—

Vancouver, B.C.—A. G. McCandless, Molsons Bank Building.
Calgary, Alta.—Thoburn Allan, Customs Building.
Winnipeg, Man.—W. L. Ball, Union Bank Building.
London, Ont.—Geo. R. Tambling, Bank of Toronto Chambers.
Brantford, Ont.—H. H. Powell, assistant inspector, William Street.
Hamilton, Ont.—Berkeley G. Lowe, Customs Building.
Toronto, Ont.—J. B. Kilgour, 59 Victoria Street.
Toronto, Ont.—Hugh D. Paterson, 59 Victoria Street.
Ottawa, Ont.—Kenneth Fellowes, tariff branch, finance department.
Montreal, Que.—Peter F. McCaffrey, Post Office Building.
Montreal, Que.—Arthur Labbe, Post Office Building.
Quebec, Que.—Evariste Rochette, 76 St. Peter Street.
St. John, N.B.—Arthur W. Sharp, 57 Princess Street.
Halifax, N.S.—J. P. Edwards, Room 44, Dennis Building.

Other appointments are being made.

The income tax forms will probably be distributed this week. The questions cover four sides of a folded form and on the first page spaces are provided for the full name, address, occupation, place of residence during the year and whether married, unmarried, widower without dependants, etc. At the top of this page are spaces to be filled in by the inspector and the commissioner of taxation.

Definition of Income.

Inside pages are devoted to the description of income on one side, and exemptions and deductions on the other. Under the first title, spaces are provided for filling in the gross income derived from—and here are inserted under their respective sections that portion of the gross income derived from salaries and wages, professions and vocations, commissions, business, trade, commerce or sales or dealings in property, whether real or personal, farming in its several branches, rents, dividends, interest on notes, mortgages, bank deposits and securities other than reported in the preceding item, fiduciaries (income received from guardians, trustees, executors, administrators, agents, receivers or persons acting in a fiduciary capacity), royalties from mines, oil and gas wells, patents, franchises and other legalized privileges, interest from Dominion of Canada bonds, issued exempt from income tax, and other sources not enumerated above. On the last line is provided a space for the totalling of all the above items, making total income.

As to Exemptions.

Under the heading "exemptions and deductions," similar spaces are provided for "amount claimed for . . . " and here are provided spaces for the insertion of depreciation; bad debts actually charged off within the year; allowance for exhaustion of mines and wells; contributions actually paid to the Patriotic and Canadian Red Cross Funds, and other approved war funds; interest paid on moneys borrowed and used in the business; federal, provincial and municipal taxes on property used in the business; interest from Dominion of Canada bonds, issued exempt from tax; and other claims for deductions to be specified in detail. There is then provided a space for bringing down these totals under the sub-caption: "Total Exemptions and Deductions." The taxee must then state the amount paid under the business profit tax act, 1916, which accrued in the 1917 accounting period.

The declaration of the truth and accuracy of the statement and date and signature follows.

The last sheet is devoted to the explanation of the various items contained in the foregoing. Returns are to be made in triplicate, one copy of which will be retained by the taxpayer and two delivered to the inspector of taxation for the district of Ottawa.

Totals previously derived are then brought forward by the officers of the taxation branch, the balance representing "net income." Other calculations are then provided for, finally bringing the net down to the amount of tax to be paid.

MACKAY COMPANIES

The annual meeting of the Mackay Companies was held on February 15th. The income from investments in other companies was reported to be $4,519,364, of which sum $4,425,198 was paid out in dividends. The operating expenses amounted to $89,058, and a balance of $5,108. The balance sheet is as follows:—

Assets:	
Investments	$92,417,778
Cash	881,074
	$93,298,852
Liabilities:	
Preference shares issued	$50,000,000
Common shares issued	41,380,400
Surplus	1,918,452
	$93,298,852

Control of Quebec's Municipal Affairs

Provincial Government Will Create New Department with Wide Powers—Municipalities Will Not be Allowed to do Acts Which Will Harm Their Credit in Money Markets—Reports to be Made to Provincial Treasurer—Supervision of Loans for Public Works.

THE Department of Municipal Affairs, which is being created by the Quebec government, will have a wide field of operations. As the new system of controlling municipalities is found to meet with success, the ultimate result, according to what has been said in the Quebec legislative assembly, will mean that it will no longer be possible for a municipality, civic or scholastic, to commit acts that affect it badly in the money market. An almost complete control of civic finance is provided in the new bill, or rather series of bills on the same subject, that were taken up in the course of a protracted sitting. The manner in which municipalities are to issue their loans, obligations on the municipalities to provide sinking funds each year, and a number of other matters very directly affecting all matters of municipal finance, even to the control of the bookkeeping, are included in the new legislation.

It will be the aim of the government to see that the municipalities issue serial bonds for obligations. Each year the coupons, when paid, will pay not only the interest, but also the year's proportion of the capital, so that at the end of the term on which the bonds are issued, the principal and interest will both be extinguished.

There is to be created a department of municipal affairs, under the direction of a "minister of municipal affairs." This department will be added to one of the already existing departments for the present, but it will have its own deputy minister and own staff. The minister to whom is assigned the supervision of this department will bear the title of two departments, as for example, Mr. Mitchell might be styled "provincial treasurer and minister of municipal affairs."

One of the bills presented in the Quebec legislature, regarding the new department, deals with the deposit in certain cases of moneys intended for the sinking funds of municipal and school corporations, and to amend what is necessary in the statutes in regard thereto. Mr. Mitchell explained in the provincial house that by virtue of this bill municipalities and school corporations are obliged to create a sinking fund for the time of the loan made. This will do away with perpetual demands to the legislature each year for special favors in that regard. The law provides that when the capital of a loan contracted, or of bonds issued, by a municipality incorporated by special act, or under the provisions of the general law, is repayable by annual instalments, or by a series of consecutive and yearly instalments covering the whole term of the loan or of the bond issue, the moneys set aside each year for the sinking fund shall be deposited every year in the office of the provincial treasurer at Quebec, and so much of said deposit as may be required shall be used to meet instalments, if any, at the dates on which they respectively fall due. However, there is a provision to the effect that if a municipality can satisfy the minister of municipal affairs that it is advisable and in the interest of the municipality that the sinking fund be deposited elsewhere than in the office of the provincial treasurer, or be otherwise invested, authorization may be given to use the money otherwise than to turn it over yearly to the provincial government.

The government will allow the municipalities interest at the rate of 3½ per cent. on the yearly moneys thus entrusted to it for what is practically safekeeping, that is, to prevent the municipalities from being tempted to spend it otherwise than to meet debentures.

The government will compound the interest yearly, which will be a considerable item. When the municipality has made the yearly payments to the government to look after the loans at maturity, and when the loans are due, and consequently the government has the municipality's funds needed to meet the loan, it is enacted not that the government shall turn the money over to the municipality so that it may pay back the loan, but—still greater precaution against a municipality that is apt to be careless—the government itself will pay the money over to the bank where the bonds are to be paid. The government is simply taking no chances of collecting, say, a million dollars in the course of the term of a loan and then handing the money over to the debtor to pay to the creditor.

The moneys deposited by the government to meet municipal loans are unseizable, save and except in execution of a final judgment from a competent court rendered in favor of the lender, or of one or more of the bondholders, for whose benefit the sinking fund has been created. The moneys, if seized, must be distributed rateably amongst all the holders of the bonds.

The moneys which the municipalities are required to deposit with the provincial treasurer may be invested in Dominion or provincial stock or bonds in public securities of the United Kingdom, or of the United States of America, or in the stock or bonds of any municipal or school corporation in the province.

Provision is made whereby a tariff of fees and duties shall be paid by the interested corporations in connection with deposits and reimbursement. The purpose of this clause is evidently that the cost of the municipal department in regard to receiving municipal money and paying it out to meet municipal obligations shall not be a charge on the province; also the government by paying 3½ per cent. to the municipalities on their own money is liable to benefit by the fact that it has the option of investing such money where it wishes, and naturally at considerably higher than 3½ per cent.

Another clause provides that a municipal or school corporation which has effected a loan for which a sinking fund must be created under the laws governing the same, or which has issued bonds, shall, within the 30 days immediately following the completion of the loan, or the delivery of the bonds, make to the provincial treasurer a report, under oath, of the particulars of the by-law or resolution under which the loan was contracted or the bonds were issued; the amount of the loan or of the bonds, the amount of each instalment, if any, the maturity dates and the places of payment of the principal; the date of the completion of the loan, the name of the purchaser, and the net amount received by the corporation out of the money borrowed or out of the sale of the bonds, together with a certified copy of the by-law or resolution.

Provisions are made whereby municipal officers are forced to comply with these provisions, and whereby any trustee, bondholder, ratepayer or other interested party may, by an action-in-law, force the municipality to make the deposit of the sinking fund with the provincial government, and there is a fine for officers giving false information. The act is to come into force by proclamation.

Another bill dealing with the new department is to the effect that all municipalities must keep proper accounts. Such accounts must be rendered to the minister of municipal affairs two months after the end of the fiscal year, and if the accounts are correctly kept that matters end there, but if not correct, in the opinion of the minister, the latter is authorized to have a proper audit and report, for any period of time, made of the affairs of the municipality, and at the expense of the municipality, using inspectors of his department for that purpose, or outside accountants. Provisions are made to force the municipal officers to give all facilities to the officers of the government, with a penalty for refusal. If the inspector reports that a change in the bookkeeping is needed, the minister is to have power to order such change, and to compel compliance.

The bill deals with the question of borrowing money, and the terms. These clauses are particularly important, applying as they do, to every municipality.

It is provided that the term of a loan for establishing, purchasing, extending or enlarging a system of sewers or a system of supplying water, or acquiring land for waterworks for developments of or for improvement to public parks or playgrounds shall be for 40 years.

Loans on Works.

For works undertaken by municipalities for gas or electric light plants and system, for improvement of highways, of streets and sidewalks, if the pavements or sidewalks are of stone, block brick, concrete or other material of similar lasting character, or for the construction of bridges when of similar solid construction, the term of the loan shall be for 30 years.

For acquiring land for development, construction or extension or improvement of highways, streets and sidewalks, if the pavements or sidewalks are of macadam or asphalt, or other materials of similar lasting character, or for the acquisition and construction of wooden bridges, or material expected to last as long as wood, for acquiring necessary lands, therefore, the term of the loan shall be 20 years.

For acquiring land for development, construction, extension and improvement of highways, streets or sidewalks, if the pavements or sidewalks are not of material of a lasting kind, or for loans for aid, bonus or encouragement, the term of the loan is to be for 10 years.

Loans contracted for any purposes not specified, if the minister of municipal affairs considers that such works are of a lasting character, the loan may be of 30 years, if not so considered, the loan is limited to 10 years.

Money and Purpose.

It is made obligatory to apply all moneys borrowed for a certain purpose to such purpose only, but if there is a surplus, if such should happen, the excess may be used for other purposes. Every member of the council, who either verbally, or in writing, by his vote or tacitly, authorizes the misappropriation of money, shall be personally responsible for all sums thus illegally diverted from the use for which they were intended, and such money may be recovered by action-in-law, and enforceable by coercive imprisonment against the member or the members of the council who are guilty. Such responsibility shall be joint and several, and shall apply to the secretary-treasurer or other officer who participates in such illegal diversion of such moneys or who causes the same. The action to recover the money may be taken by the municipality itself, by a ratepayer, and even by the minister of municipal affairs.

Changes are made as to the voting on by-laws. At present money by-laws before coming into force have to be approved by the proprietors. They will have to be approved also by the lieutenant-governor-in-council, which means the new minister of municipal affairs. Every loan must be provided for with a sufficient sinking fund to meet it at maturity instead of the 1 per cent. now provided for, which would only meet a 40-year loan at maturity. There are a number of provisions as to loans, insuring greater safeguards to bondholders.

Mr. A. E. Warren, formerly a Canadian Northern Railway official in the West, has joined the Railway War Board as a representative on the administrative committee of the government railways.

LAND VALUES IN SASKATCHEWAN

Evidence at Canadian Northern Railway Stock Inquiry—Influx of Settlers

The land holdings of the Canadian Northern Railway and the colonization of lands earned by the company through government grants, were discussed before the Arbitration Board inquiring into the value of the company's stock, at Osgoode Hall, Toronto, this week. Mr. Lorne W. Mitchell submitted a statement showing that the company still held 873,961 acres of land as yet unsold out of the parcels granted under land subsidies for the construction of various lines.

Mr. Edward A. Field, general manager of the company's land department, submitted statements showing the progressive advance in the values of Canadian Northern Railway lands, and declared that the average value of the lands now held by the company stood, at a low estimate, at $15.65 per acre. The average price was brought down by the lower values of lands situated in Manitoba, but the bulk of the company's holdings, he pointed out, were located in Saskatchewan, where values averaged $38 per acre, estimated on the prices secured from recent sales. The company had sold no lands at less than $20 per acre recently, and prices were steadily increasing because of the lively demand from settlers for extensions to their holdings.

Brought in Settlers.

Mr. Field pointed out that the first large influx of settlers from the prairies of the Western States had been coincident with the opening of the Saskatchewan Valley by the Canadian Northern Railway. There had been a noticeable increase in the numbers of American settlers coming to Canada since the United States entered the war, he said, and the prosperity enjoyed by the western farmers because of the high levels of wheat prices had also tended to put land prices forward. Mr. Field thought that prices would continue to increase even after the war, as the remaining unoccupied lands available for purchase were in settled districts, where the productive values represented greater net profits owing to the development of marketing facilities.

Enhancement of Land Values.

Mr. Howard Everitt, president of the Luse Land and Development Company of Minneapolis and Regina, also testified as to the causes which are working for the enhancement of land values in Saskatchewan. He looked forward to a large increase in the numbers of settlers from the United States after the war, owing to the removal of sentimental barriers which had prevailed to some extent against the colonization of the west prior to the entry of the United States as Canada's ally in the European conflict.

American settlers were attracted to the Saskatchewan Valley because of the comparatively low price and evident high productivity of the lands, and were also directed north of the international boundary because of the difficulty of securing new land holdings in the States, where the only available unoccupied lands were the government reclamation projects and the cut-over timber lands of Minnesota, Michigan and Wisconsin, which involved a clearing of from $12.50 to $75 per acre in addition to the purchase price. Similar evidence was also submitted by Mr. John Martin, of Minneapolis, who for the last 17 years has been active as a colonizer of Western Canada lands.

SASKATCHEWAN FARM LOANS ACT

Three amendments have been made to the Saskatchewan farm loans act. Section 14 has been amended by the addition of a clause providing that no member of the legislative assembly may be granted a loan under the act. The next, and most important, amendment, provides that the provincial treasurer may raise by way of loan the sum of ten million dollars instead of five million as before for the purposes of the act.

The last amendment is the redrawing of Section 25 so as to make it possible for the provincial treasurer to advance any sum up to the total amount of the mortgages before the mortgages are deposited with him. Formerly it was the securities which were limited to the amount of the mortgages, but now the advances are so limited. In future it will be possible to take advantage of a favorable opportunity to sell enough securities in anticipation of the demand, so that there may always be enough on hand to make the required advances.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Canadian Locomotive Company.—The company has completed delivery of ten Mikado type locomotives for the Grand Trunk Railway, and ten more of these locomotives are on order for use in freight service.

Wayagamack Pulp and Paper Company.—At the annual meeting the full board of directors was re-elected as follows: C. R. Whitehead, president and general manager; Alex. Pringle and Jas. W. Pyke, vice-presidents; G. H. Duggan, J. N. Greenshields, K.C.; Henning Helin, Hugh Mackay, K.C.; Alex. Maclaren and Sir Wm. Price.

Asbestos Corporation of Canada, Limited.—Profits, including income from the investments, amounted to $563,069 in 1917, as against $537,938 in 1916. As the gain of about $27,000 or 5 per cent., followed one of $151,500, or 40 per cent., in 1916, the showing may be considered highly satisfactory. After deductions for renewals and betterments, $159,280, and bond interest, $150,000, the surplus profit for the year was $253,789, equal to 6.3 per cent. earned on the preferred stock, as against $215,476, or 5.4 per cent., earned the previous year, and $93,594, or 2.3 per cent. in 1915.

Provincial Paper Mills Company.—The annual meeting of the company was held in Toronto on February 20th. There were no changes made in the board of directors or management, and the financial reports were adopted by the shareholders with little discussion. According to the report, after paying all bond interest and other charges, the net profits for the year were $458,338. The sum of $119,000 was paid in dividends on preferred stock and $80,000 on common stock. The surplus at end of year amounted to $184,333. The report indicated the total assets $5,552,278 as compared with $5,124,466 at the end of the previous year.

Laurentide Power Company, Limited.—Gross earnings of the company in 1917, the first full year of operation, amounted to $663,858, the net earnings from operation to $579,795, and the surplus after fixed charges to $204,795. The latter represented earnings at the rate of 2 per cent. on the outstanding capital stock. From the year's surplus there was transferred to depreciation reserve $100,000. There was $45,558 transferred to reserve for contingencies, and $2,249 set aside for income tax. That left $56,986 to be carried forward.

The feature of the annual statement of the president, Mr. J. E. Aldred, is the announcement that an increase in the capacity of the plant up to the 180,000 horse-power for which it was designed, by the installation of three new units of 20,000 horse-power each, is an early possibility.

Dominion Power and Transmission Company.—Gross earnings of the company for the year ended 1917, amounted to $2,967,273, while operating expenses totalled $1,733,759. Net profits were $726,219, which added to the previous balance of $536,065, made the total profit and loss surplus at the end of the past year $1,262,284. The directors announced at the annual meeting that the company would continue the 7 per cent. dividend on the preferred and the 4 per cent. dividend on the common stock. It was also stated that, owing to the strong financial position of the company a bonus might be paid during the year.

British Columbia Fishing and Packing Company, Limited.—The British Columbia Packers' Association, owned by the British Columbia Fishing and Packing Company, Limited, reports profits of $548,231 for 1917, an increase of $290,423, or about 113 per cent. over the return for the previous year. After allowing $95,151 for depreciation, the balance of $453,080 remaining, represented earnings at the rate of 21 per cent. on the company's total capital stock, common and preferred, both of which are on an 8 per cent. dividend basis. The total surplus, $1,347,945, is $366,668 higher than at the end of 1916, and is equivalent to more than 60 per cent. of the par value of the capital stock outstanding. The balance sheet shows current assets of $1,086,792, against current liabilities of $109,605, leaving a working capital surplus of $927,187, against $678,720 a year ago.

Toronto Street Railway Company.—No additional directors were elected at the special meeting of the company held on February 26th. Mr. Hermann H. Pitts, of Ottawa, refused to produce his proxies, and as a result an adjournment of the meeting had to be made until April 4 at noon. The dividend for the present quarter was declared at 4 per cent. This is a cut of 50 per cent. of what was expected. Increase of wages paid employees of the company, amounting to $630,000, last year is given as the reason for the cut. Sir Henry Pellatt stated that higher wages paid to men cut into the revenue to the extent that the company finds itself unable to pay high wages and the usual dividend, too. Consequently, the dividend suffered.

Tretheway Silver Cobalt Mine, Limited.—The company's ore reserves at the end of 1917 show a decrease of 2,670 tons as compared with 1916. The ore blocked out increased 1,438 tons, while the ore broken decreased 4,108 tons, the net decrease in tonnage being 13 per cent. The estimated ounces of silver in the ore reserves decreased from 361,482 to 264,044, a net decrease of 27 per cent. Of course 1918 operations might reasonably be expected to deplete very materially the present ore reserves. During the year a total of 34,722 tons of ore were milled, averaging 13.3 ounces per ton, from which 341,278.23 ounces of silver were obtained. The net value of ore produced was $263,016.86, with an operating profit of $114,934.67, out of which dividend No. 15, amounting to $50,000, was paid to shareholders on August 31st last. The company subscribed for $25,000 of the Victory loan.

Southern Canada Power Company, Limited.—The following are the gross and net earnings of the company and its subsidiaries for the month of January, and for the four months ended January 31, 1918, as compared with the same period of last year:—

	Jan., 1918.	1917.	Increase.
Gross	$ 42,886	$ 32,741	$10,145
Operating expenses and purchased power	22,796	15,997	6,799
Net earnings	$ 20,090	$ 16,743	$ 3,347

Four months ended January 31, 1918:

	Jan., 1918.	1917.	Increase.
Gross	$155,481	$120,384	$35,097
Operating expenses and purchased power	85,600	58,418	27,182
Net earnings	$ 69,881	$ 61,966	$ 7,915

Maritime Telephone and Telegraph Company.—The sale of a block of shares of the Prince Edward Island and Telephone Company, valued at $88,993, by the owners, the Maritime Telephone and Telegraph Company, was the subject of animated controversy at the annual meeting of the latter company at Halifax. The transaction was opposed by Hon. F. B. McCurdy, M.P., on behalf of his firm, which had been active in the marketing of the company's securities, and he was supported by others, but S. M. Brookfield, the president, and his board were supported by 77,726 shares against 28,810 for Mr. McCurdy and his friends.

Mr. C. F. Sise, Jr., who, with Mr. L. B. McFarlane, president of the Bell Telephone Company of Canada, represents that company's interest in the Maritime Company, suggested that as the sale of the stock was apparently not understood by the shareholders, a special meeting be held in March to discuss and act on the matter, which was eventually agreed to. A counter-proposal, that the election of directors be delayed until the special meeting, precipitated a showdown, with the result that the management was sustained by 77,726 to 28,810 shares. Mr. McCurdy's objection was that the shareholders should have been informed of the transaction, and that the directors had exceeded their legal authority in making the sale, to which Mr. Brookfield dissented.

Montreal Light, Heat and Power Company.—Now that legislative sanction has been secured for Civic Investment and Industrial Company to change its name back to the old style of "Montreal Light, Heat and Power Company," application is being made to the Montreal Stock Exchange to quote the company's capital stock under the old name.

Mr. J. S. Norris, vice-president of the company, states that it was not the present intention of the company to call in the stock certificates issued in the name of Civic, and replace them by a new issue bearing the old name of Montreal Light, Heat and Power Company. The company was the same, whichever the name, and there was no change in capitalization. To call in the $63,700,000 Civic certificates and issue new Power certificates, would entail a lot of unnecessary trouble and inconvenience for both the company and the shareholders. The probable course, at least for the present, will be to replace the old certificates by new ones whenever the old come in for transfer involving change of ownership. When the change goes into effect Civic certificates will cease to be issued and the outstanding number will be continually reduced by transfers in the ordinary course of buying and selling.

Canada Steamships Lines.—The annual statement of Canada Steamships Lines, issued recently, shows that while there was a large increase in the gross revenue of the company, there was also a large gain in expenses, with the result that the net shows a slight decrease compared with the previous year. After the deduction of bond and debenture interest and all other charges, there was a profit for the year of $2,178,401. This compares with $2,391,027 the previous year, making a decrease of $212,626. The surplus account shows that, after adding the balance from last year and allowing for the $2,417,166 paid on account of current and deferred preferred, there was a surplus of $2,374,754, an increase of $547,411.

The president, James Carruthers, in his report to the shareholders, says that the tonnage of the company was much greater than last year, despite the losses that had occurred, and that the future could only be considered a promising field for development and expansion on the high seas. In speaking of dividends, Mr. Carruthers stated that the deferred dividends on the preference shares of the company had been paid, and it has been decided to resume them quarterly. Altogether, the situation of the company could be summed up as highly satisfactory.

Lake of the Woods Milling Company.—The directors, in placing the common stock on a 10 per cent. per annum dividend basis on February 23rd, against the 8 per cent. rate which has prevailed since 1909, announced that the earnings of the Sunset Company, a subsidiary, constituted the basis for the increase. The Sunset Company manufactures jute and cotton bags, and the balance sheet of the Lake of the Woods Company shows among investments the $50,000 capital stock of the company. The increase in the dividend from 8 to 10 per cent. was expected, but a bonus of 2½ per cent. declared along with the 2½ per cent. quarterly dividend, came as a surprise. Like the increase in the dividend, the bonus is stated to originate in the earnings of the Sunset Company. The bonus is made up of 2 per cent. from the Sunset Company's earnings for the year ended August 31st last, and ½ of 1 per cent. for the quarter ended November 30th last. As ½ of 1 per cent. of the present quarterly dividend of the Lake of the Woods is stated to come from the Sunset Company's earnings, the latter will be the source of the 2 per cent. per annum extra which Lake of the Woods shareholders will now receive.

Shawinigan Water and Power Company.—The announcement that the company was to erect and operate a plant for the manufacture of acetic acid for the United States government, the whole enterprise to be financed by the United States government itself, was the feature of the annual meeting of Shawinigan shareholders held recently. The agreement in regard to the new enterprise was reached only on Monday, and the announcement provided an interesting variation for the routine of the annual meeting. In making the announcement, Mr. J. E. Aldred, the president, stated that the Shawinigan Company was approached as the only company on the continent with sufficient resources to undertake the manufacture of acetic acid in large quantities, and he considered the fact that the United States government was willing to send all the necessary funds to finance the enterprise to Canada as significant. It reinforced the Shawinigan claim to being the premier power enterprise on the continent.

Work will start immediately on the new plant, which will be a duplicate of the plant presently owned and operated by Shawinigan through its subsidiary, the Canadian Electro Products Company. As the new plant will be financed by the United States government and its affairs will, therefore, be separate from those of Canadian Electro Products, it is probable that the new company will be incorporated immediately. The capital expenditure on Canadian Electro Products plant was in the neighborhood of $2,000,000, and the new construction will take approximately as much. The financial statement of the Shawinigan Company was in line with forecasts. Gross earnings were at $2,902,210, showing an expansion of $576,338, or 25 per cent., while net revenue, after charges and depreciation reserve, amounted to $1,350,864, an increase of $97,128, or slightly less than 8 per cent. The lower ratio of gain in net as compared with gross is to be explained chiefly by a rise of over $200,000 in expenditure under the head of "power purchased," and of upwards of $150,000 in interest charges. The former increase refers to the increased amount of power taken from Laurentide, a purchase which went to swell gross revenues, while the latter was due to enlargement of subsidiary plants, the full benefit of which had not yet been reflected in the company's revenues. Net revenue as stated in the foregoing represented earnings of 9 per cent. on the capital stock outstanding, against 8.3 per cent. the previous year.

Brazilian Traction, Light and Power Company.—For the third month in succession, and for the fifth time during the year, the net earnings of the company showed a decrease in December, due to a continuance of high operating costs, which conspire to offset the advantages indicated by an expanding revenue. The figures for the month of December compare as follows:—

	1917. Milreis.	1916. Milreis.	Increase. Milreis.
Total gross earnings	8,069,000	7,312,000	757,000
Operating expenses	4,372,000	3,372,000	1.000,000
Net earnings	3,697,000	3,940,000	*243,000
Aggregate gross earnings from January 1	92,200,000	84,885,000	7,315,000
Aggregate net earnings from January 1	47,073,000	46,595,000	478,000

*Decrease.

Comparisons for the whole of last year are as folllow:—

1917.	Gross. Milreis.	Net. Milreis.	Net increase. Milreis.
January	7,236,000	4,002,000	161,000
February	6,872,000	3,885,000	366,000
March	7,549,000	4,151,000	368,000
April	7,453,000	4,053,000	213,000
May	7,864,000	4,289,000	181,000
June	7,642,000	4,022,000	92,000
July	7,795,000	2,849,000	*292,000
August	8,064,000	4,017,000	*36,000
September	7,925,000	3,900,000	122,000
October	8,000,000	3,716,000	*184.000
November	7,695,000	3,492,000	*270,000
December	8,069,000	3,697,000	*243.000

*Decrease.

Mackay Company.—The announcement that the trustees of the company have been buying in the preferred shares of the Mackay Companies in the open market is one of the interesting features of the Mackay report for the year ended December 31st last. After stating that the reserves of the system had been increased during the past year and that in their investment the trustees had confined themselves to government securities of the highest class, namely securities of the United States, British, Canadian and French governments, the report remarks:—

"During the year your trustees have also invested in preferred shares of the Mackay Companies by purchase in the market. It is considered that this is a very opportune time to make such purchases of the preferred shares of the Mackay Companies when all high-grade securities are quoted below

IMPORTING LUXURIES

Our imports from the United States are considerably larger than our exports to that country. This is partly due to the importation of a large quantity of raw materials for the manufacture of war supplies. At the same time, the purchase of articles which may be regarded as luxuries, continues to a marked extent. According to trade statistics of the United States, there has been a notable decline in the quantities imported by that country of food, clothing and personal adornment which may properly be classed as luxuries. This may be due partly to the lack of transportation and to the reduction of available supplies in the countries at war. According to Mr. O. P. Austin, statistician of the National City Bank of New York, despite these considerations, the reduction in the quantities imported has been so general as to indicate a growing disposition to minimize unnecessary expenditures in the classes of articles of that character brought into the United States.

Among the imports which have declined are diamonds, pearls, laces, plushes, ribbons, hats, bonnets, feathers, jewelry, fruits, olives, olive oil, cheese, macaroni, cream and confectionery. Cheese was previously purchased from France, Italy, and Switzerland and cream from Canada. The olives came from Italy and Spain. The foreign product of macaroni, imported, for example, from Italy, is classed as a luxury in the United States in view of the fact that that country now turns out $12,000,000 worth per annum.

An analysis of Canadian imports points to opportunities for the reduction of the purchase of luxuries. This is a work which the new War Trade Board of Canada will undoubtedly take up. Their action will be supported by the people of the Dominion who are ready for all proper and reasonable regulation with a view to the successful conclusion of the war as speedily as possible.

CANADA AND EMPIRE

For all practical commonsense purposes, Canada now has all the constitutional powers she requires in conducting her own affairs. This statement was made by Mr. Z. A. Lash, K.C., LL.D., in an instructive and logical address to the Ontario Bar Association last week. He pointed out that the additional thing which the Dominion would acquire by independence, but which would be of no benefit to her, would be the national status enabling her to declare war against another nation and to have war declared against her by another nation. He did not lose sight of the fact or argument that Canada might, in connection with her relations with other nations, bring the whole Empire into war; so might any of the other Dominions, or even colonies, bring the Empire, including Canada, into war; so also might Great Britain herself, in reference to her relations with other nations.

Mr. Lash agreed that the present position should not be maintained, under which Canada might be involved in war by the action of the government of Great Britain or of another unit of the Empire, in connection with matters over which she has no control, or in respect of which she has not even been consulted; but the remedy for this, he thought, could be afforded, not by independence, but by an agreement under which Canada would have the right to take part in those affairs which involve the issues of peace and war.

He made the definite statement, after analyzing the matter in detail, that neither constitutionally, financially, nor in importance as a factor in the world's advancement would Canada advance her present position or her prospects for the future by becoming independent.

"Should Canada become an independent nation," he said, "and should war arise with a foreign nation prepared for war, while Canada was unprepared, what would be the result? If that nation were not the United States of America, Canada would have to appeal to the United States for protection or agree to such terms as the enemy might dictate. If that nation were the United States, prepared for war, while Canada was unprepared, there would be none to appeal to and Canada would have to submit. What would be her ultimate destiny in either case?"

There is not space in these columns to print the address of Mr. Lash in full, but a considerable part of it is published on another page. In his concluding remarks, he stated that the war has shown us that Canada as a unit of the great British Empire is far safer and better able to take part in the world's affairs than she could possibly be as an independent nation. "She will never disrupt the British Empire by leaving it," said Mr. Lash, a sentiment which has the unqualified approval of the people of the Dominion.

BRITISH COLUMBIA'S FINANCES

The balance sheet of the province of British Columbia for the year ended March 31st, 1917, was presented to the provincial House by the finance minister last month. An examination shows it to be much more businesslike than has been the custom in the past. It reflects the good work of Mr. A. N. Mouat, who was appointed comptroller-general of the province in August last. In giving consideration to the necessary reorganization of provincial finances, the fact was not overlooked that when British Columbia entered Confederation the province retained the ownership and control of the natural resources of the country. A more comprehensive system of supervision over revenues and expenditures is therefore required in British Columbia than is the case in other provinces of the Dominion, which do not own, nor are entrusted with the administration of lands, forest, water rights, minerals and fisheries.

The system which it is proposed to instal at the commencement of the ensuing fiscal year will provide a complete check over all expenditures by audit in the "Controlling and Audit Branch," as follows: (1) Before liability is incurred, or expenditures authorized to be made against the appropriations sanctioned by the legislature; (2) before payment is made; (3) after payment to ensure that expenditures are charged to the proper account.

Under such a system, all expenditures will be duly authorized, and a stop put to the practice of incurring liability irrespective of the appropriation and holding over the accounts in relation thereto when the appropriation is exhausted and without such indebtedness being disclosed in the public accounts of the province.

The pre-audit system was referred to in *The Monetary Times* of July 27th last. The fact that it materially assisted in bringing about the reduction of $1,209,716 in the operating expenses of the city of Edmonton for the years 1915 and 1916, has clearly demonstrated the superiority of "counting the cost in advance of liability being incurred" over the usual custom of counting it when it is too late. It is further proof that the conduct of public affairs can be placed on the same efficient basis usually obtaining in the management of a progressive business corporation.

LOAN TO CANADA?

Sir Robert Borden, premier, and Hon. A. K. Maclean, acting minister of finance, have gone to Washington to confer with the government there in regard to the exchange situation and the adjustment of purchases and payments for supplies needed by Canada, Great Britain and the United States.

Our representatives will probably confer with Mr. McAdoo, United States secretary of the treasury, and with Lord Reading, who is representing the United Kingdom on a special mission in America. The position between Canada and the United States in regard to trade and securities, their relation to the Anglo-Canadian position and also to the winning of the war, are matters for the serious consideration of the authorities. We have against us, so far as trade with the United States is concerned, a rapidly increasing trade balance which, by the the end of this month, will be between $400,000,000 and $500,000,000. Owing to war finance requirements in the United States, we are unable to sell securities there to help offset the adverse trade balance. In addition, we are compelled to finance at home obligations maturing in the United States this year. We have a favorable trade balance in regard to United Kingdom trade but the Imperial authorities are not in a position, after the financial tasks of nearly four years of war, to pay cash for all their purchases.

In view of the facts that we are actively co-operating with the United Kingdom and the United States in the prosecution of the war, that we have raised very substantial sums in Canada for that purpose and are prepared to continue, and in view of the fact that we are one of the best customers of the United States, it is reasonable, we think, that the neighboring republic should give more intimate consideration to the position. Possibly a scheme of reciprocal credits can be worked out, as suggested in Ottawa despatches. We think in any event a substantial loan by the United States government to Canada, such as the loans made to other Allies, would be a businesslike and proper arrangement.

UNFAIR TO INVESTORS

The Vancouver Daily Sun reports a case under the War Relief Act which shows how unjust the operation of that act is to outsiders who have money invested in British Columbia. It appears that a Scottish mortgagee loaned about £1,000 upon a house at Kitsilano, and, upon payments not being forthcoming and being unable to foreclose, applied to a judge for an order for the collection of rent at the rate of $30 per month. Counsel for the mortgagor pleaded that he was on service as a guard of railway property and received his $1.10 a day and the separation allowance for the family, and was paying hospital fees for a sick daughter. The circumstances of the mortgagor were unquestionably of a character that would appeal to public sympathy, but it is obviously unfair that any part of the cost of maintaining His Majesty's soldiers in the service of the Dominion of Canada should be imposed upon an individual investor of Scotland, except to the extent he is called upon to pay taxes imposed equitably.

It is now well known that in Scotland itself, if any citizen is taken into military service and is unable to meet

his civil liabilities corresponding to those of the Kitsilano mortgagor, the Imperial government makes a grant for the express purpose of providing for rent, mortgage interest, insurance, taxes, school fees, and the like. This Scottish mortgagee is therefore called upon to pay his equitable share in providing for the civil liabilities of the gallant Scots, and is also subject to having his savings exploited by British Columbia legislation for the maintenance of the family of a soldier in the service of the Dominion of Canada. Similar conditions are tolerated by the public of Manitoba and Alberta. It is excused by the politicians on the ground of war conditions, but it must be obvious to those who give the matter any consideration whatever that the Scottish and other mortgagees, whether resident in the Dominion or abroad, are being dealt with in a manner which is akin to confiscation.

It is proper and desirable that to a reasonable extent the civil liabilities of a soldier on active service should be taken care of, but the expense should be borne by the general public, not of the provinces, but of the Dominion as a whole. This is the principle adopted in the United Kingdom, and corresponds to that being followed in Germany, according to a statement made by a member of ex-Ambassador Gerard's staff.

ONTARIO'S FIRE LOSS

Last Year It Totalled $10,365,539; There Were 9,601 Fires

The following is a statement of the causes of fires in Ontario during December last, issued by the office of the Ontario Fire Marshal:—

Cause.	No. of fires.	Amount of loss. $	Insurance loss. $	Loss not covered by insurance. $
Chimneys, flues, cupolas and stacks, overheated or defective	42	33,194	20,264	12,930
Electricity	24	20,104	15,131	4,973
Explosions	34	3,787	3,677	110
Exposure	69	185,008	155,647	29,361
Friction	2	10,920	8,920	2,000
Gas—natural and artificial	26	36,989	35,579	1,410
Hot ashes and coals	20	12,735	12,635	100
Hot grease, oil, tar, wax, asphalt, ignition of	4	260	258	2
Hot or molten metal	5	138	138	.....

Unknown	94	100,042	65,148	34,894
Unclassified (temporarily)	149	340,998	323,587	17,411
Total	895	1,130,985	900,943	230,042

Fires Last Year.

The following is a summary of fires in Ontario last year:—

Month.	No. of fires.	Loss.	Insurance loss.	Loss not covered by insurance.
January	798	$ 808,419	$ 566,589	$ 241,830
February	1,020	1,329,369	1,072,959	256,410
March	765	1,144,373	886,126	258,247
April	666	896,461	693,484	202,977
May	908	1,242,486	953,312	289,174
June	682	515,936	310,742	205,194
July	852	512,391	407,908	104,483
August	931	605,115	394,010	211,105
September	767	651,138	467,783	183,355
October	772	821,862	629,841	192,021
November	625	707,004	613,750	93,254
December	895	1,130,985	900,943	230,042
Total	9,601	$10,365,539	$7,897,447	$2,468,092

NOTE.—These figures must not be considered as a final report for the year owing to the fact that some losses are still outstanding and in other cases adjustments are not completed by the insurance companies involved.

Properties Destroyed or Damaged.

The following is a classification of properties destroyed or damaged by fire in Ontario in December last:—

Class of property.	No. of fires.	Amount of loss. $	Insurance loss. $	Loss not covered by insurance. $
Apartment houses, rooming houses, flats	13	3,695	3,650	45
Barns (farm only)	23	34,493	19,165	15,328
Buildings in course of construction	1	300	......	300
Churches	1	10	10	......
Club houses	2	505	503	2
Coal, coal and wood yards, trestles	4	43,000	14,160	28,840
Dwellings	572	142,629	116,592	26,037
Elevators and grain warehouses	2	11,800	9,400	2,400
Garages	10	18,436	18,436	......

BRITISH BILLS AT 6 PER CENT.

Messrs. J. P. Morgan and Company, of New York City, have announced that this week's offering of 90-day British treasury bills will be made at 6 per cent. discount, which is an advance of ½ of 1 per cent. over the rate quoted during the last two weeks. Previous to that the bills had been offered at 6 per cent. and at 5¾ per cent. The advance in the rate is ascribed to the fact that Secretary McAdoo has raised the rate on United States treasury certificates of indebtedness from 4 to 4½ per cent. The total amount of British bills outstanding is less than $100,000,000, and while the weekly offerings have been restricted to $15,000,000, the sales in recent weeks have been considerably less than that, the bankers not making any special effort to dispose of the maximum amount.

Established in 1836. Incorporated by Royal Charter in 1840

The Bank of British North America

Paid-up Capital - $4,866,666
Reserve Funds - - $3,017,333

CANADA AS PART OF EMPIRE

We Are Better Off Than if an Independent State—Trade and Revenue Important Matters

A thoughtful address on the difficulties in changing the basis of the Canadian constitution was given at the annual meeting of the Ontario Bar Association last week by Mr. Z. A. Lash, K.C., LL.D. After briefly outlining the constitution of the British Empire and of Canada, Mr. Lash stated that innumerable questions would arise should it be decided by Canada to change the basis of her constitution by leaving the Empire, whether this change would be by application to the Imperial parliament for an act granting a new constitution, or by the action of Canada herself without reference to the Imperial government or parliament. Mr. Lash assumed, for the purposes of illustration, that Canada had broken away from the Empire without an act of the Imperial parliament providing a new constitution. In that case, she would have no constitution at all. To prevent chaos pending the settlement of a permanent constitution by the people, executive and legislative power would have to be assumed by bodies of some kind.

Remain as One Nation?

The first question would probably be whether the present form of Federal Union would be maintained or something different created, and in this connection there might be difficulty in deciding whether Canada would remain as one nation covering the territory from the Atlantic to the Pacific, and from the United States border to the Arctic Ocean, divided into provinces or states more or less in harmony with the present divisions, or whether claims for the division of Canada into two or more separate nations would not arise, or whether the right to negotiate for the admission of some part or parts into the American Union would not be set up.

After discussing in detail the many difficulties which would be encountered, Mr. Lash inquired whether the supposed advantages of independence would compensate for the disadvantages and warrant taking the risks involved.

Speaking generally, it is only in connection with other nations that Canada has not now full self-government or full legislative autonomy. Canada is a unit or part only of the British Empire, and cannot speak or act for the Empire as a whole, or for the other units or parts.

He then discussed this phase of the subject, stating that it was sufficient to say that of late years the wisdom of consulting Great Britain and inviting her co-operation has been admitted and Canada has benefited thereby.

Trade and Revenue.

He next considered the claim (of those few who propose that Canada should declare her independence) that her position would be improved were such a result attained. In this connection the most important matters were trade and revenue. Mr. Lash said:—

"Wherein would independence improve her position with respect to trade? It would not affect her home production or her home trade. Would it affect her foreign trade? If a foreign nation decided not to trade with Canada, Canada could not make her do so whether she remained a Dominion of the Empire or were an independent nation. It would be the same whether the refusal were open and absolute or veiled under a high tariff or other hindrance. It is not likely that Canada's position as a Dominion of the Empire would alone account for a decision not to trade with her, and it is not likely that had she been independent such decision would not have been come to. The chances of Canada's being benefited by independence in such an unlikely event, would be too remote to warrant so serious a step as separation from the Empire on that account.

"In what way would her foreign trade be benefited? As already explained Canada has full power now to make trade conventions or arrangements with any foreign nation willing to make them with her. Great Britain would not make them for her without her consent. To do so would be to interfere with the autonomy which the British North America Act has conferred—therefore a trade convention or arrangement made by Canada, as a Dominion, without the intervention of Great Britain, would be as beneficial to her as if it were made by her as an independent state. If made by Great Britain for her, at her request, it would be equally beneficial.

"The chances that a foreign nation might decline to negotiate with Great Britain, or that Great Britain might decline to intervene, are remote. In any event, until such a case arises so that its relative importance could be considered, would it be wise for Canada to make the possibility of such a case arising, the cause for separation from the Empire?

"Next, take the case of the revenue. How could independence benefit Canada in relation to that? She has now as full power over taxation, direct and indirect, and over every mode of raising a revenue as she could have if she were an independent state. She is autonomous with respect to all matters which could affect her revenue one way or the other—ex. gr. Customs and excise, export and import duties, trade and commerce, emigration and immigration, naturalization and aliens, navigation and shipping her postal service and all other matters affecting her revenue even though they might affect foreign nations, and independence would not add to that autonomy.

"Take the case of expenditure. Wherein would Canada's expenditure as an independent nation be less than her expenditure as a Dominion of the Empire? Certainly not with regard to her internal or domestic affairs and the development of her resources or her trade and commerce. I am at a loss to suggest anything resulting from independence in respect of which her expenditure would be reduced, but independence would cause enormous additional expenditure.

"So-Called Small State."

"Listen to what a German (Lasson) has written about a small state:—

" 'A so-called small state is not a state at all, but only a tolerated community which absurdly pretends to be a state. . . . There may be greater and lesser states. The lesser states have rights only in so far as they possess a power of resistance that must be taken into account in so far as they are desirable allies or respectable adversaries. The little state, however, that is obliged to base its hope of existence on the belief that it will not be attacked for fear that another state will intervene, is no state at all, but the vassal of the state to which it looks for protection, and by whose magnanimity it lives.'

"To take her proper place among nations, including Great Britain, which would then be a foreign nation, Canada would have to organize a diplomatic and consular service and be represented by ambassadors at the various courts of the world —old and new—and by consuls, vice-consuls and other officials in places without number. As an independent nation she would lose the protection of Great Britain's navy and army, and would have to create and maintain a navy and army of her own, and be prepared to defend and to uphold her rights against foreign aggression.

"Can it be doubted that the expenditure of Canada as an independent nation would far exceed her expenditure as a Dominion of the Empire?

"The Few Who Advocate."

"The few who advocate independence say that Canada would thereby escape being embroiled in the troubles of Great Britain and the other parts of the Empire, especially in the quarrels and disputes in Europe, and they point to the war with Germany as an illustration. Before the war and before the truth about Germany's plans and intentions became known, such a contention might have had reasons to support it, but the world knows now that, had Canada been a numerically small and weak independent nation (and she would have been that) and, had she remained neutral, her future from the beginning would have been in peril, and, instead of escaping the entanglements of European affairs, she might and probably would have become involved in them without being as well able to take her part as she has proved herself to be as a Dominion of the Empire. If, however, her neutrality had been maintained; if she had not sent to the war the men and munitions and food and supplies which have been sent; if she had not helped in financing for munitions, food and supplies procured on this side of the Atlantic; if the glorious successes of the Canadians in Flanders and France had not been accomplished, who could have said how near Germany would now be to victory, if victory were not already hers, and with Germany victorious Canada would, in her eyes, have been but one of those states who 'have rights only in so far as they possess a power of resistance that must be taken into account.'

"This war has opened our eyes, it has shown us that no part of the world can go on without reference to the other part, and that no distance, by land or water, between nations, can be relied on as a protection. It has shown us that the definition of a small state which I have quoted has been

BRANCHES AND CONNECTIONS THROUGHOUT CANADA

only too true, and that its truth will be perpetuated should Germany win the war; and it has shown us that Canada as a unit of the great British Empire is far safer, and better able to take part in the world's affairs than she could possibly be as an independent nation. She has proven her ability and earned her right to take that part. She will never disrupt the British Empire by leaving it. She will maintain her present splendid part and advance to a more splendid future as the foremost Dominion in that great aggregate of nations. She will take her part as of right in the control of the foreign affairs of the Empire and of the Empire's army and navy, and she will assume the corresponding obligation to contribute to the expense. She cannot remain as she is and submit without representation, as of right, in the control of foreign affairs. She cannot accept the protection of Great Britain's navy and army without joining in the expense. She cannot allow Great Britain to fight the wars of the Empire without taking part, except voluntarily, if it suits her convenience or the ideas of her government at the time. Canada and the Dominions voluntarily co-ordinated in this war because the very existence of the Empire was at stake because their liberties in common with the liberties of the peoples of the world were threatened, and because they could not stand by and see the Mother Country in great peril without going to her aid. This war has shown us that something more than co-ordination is required to solidify the Empire in her relations to foreign nations, that the self-governing parts of the Empire should have rights in these relations, and corresponding duties and obligations, and that nothing short of an agreement providing for these rights and duties and obligations will suffice."

JANUARY BANK STATEMENT

The statement of the chartered banks for January shows a substantial decrease in deposits payable after notice, deposits abroad and note circulation. Current loans also declined during the month. There was an increase in call loans in Canada and in current loans abroad. The following table shows the standing of the principal accounts in January last and the changes during the month and the past year:—

	January, 1918.	Changes during Jan., 1918.	Changes during year ending Jan., 1918.
Reserve fund.	$ 114,161,223	+ $ 60,530	+ $ 823,348
Note circulation	171,674,464	— 21,249,360	+ 38,316,277
Demand deposits	559,777,237	— 9,664,634	+ 132,468,711
Notice deposits	900,314,256	— 95,663,757	+ 36,150,912
Total deposits in Canada	1,460,091,493	— 105,328,391	+ 168,619,623
Deposits outside Canada	169,581,106	— 5,198,898	+ 10,087,058
Current coin..	82,443,367	+ 410,504	+ 13,321,917
Dominion notes	184,949.958	+ 17,440.837	+ 41,450,705
Deposits, central gold reserve	75,750,000	— 21,520,000	+ 43,700,000
Call loans in Canada	76,239,201	+ 4,460,181	— 3,497,863
Call loans outside	132,687,066	— 1,796,416	— 23,060,410
Current loans in Canada..	855.506.506	— 3,026,792	+ 49,027,359
Current loans outside	116,220,343	+ 4,639,245	+ 30,230,832
Total liabilities	1.993.170.080	— 148,554,313	+ 302.141.906
Total assets..	2,237.867.216	— 85.206,567	+ 304,350.869

Demand deposits decreased $10,000,000 as compared with the figures of December, when they increased over November by $31,000,000. That increase indicated preparation by large subscribers to make heavy Victory Loan payments. Presumably those payments, in part, account for last month's decrease in the account. Deposits usually show a tendency to decrease at this period of the year, business being generally quiet. The statement will be printed in detail in *The Monetary Times* next week.

NEW INCORPORATIONS

Tractor and Shipbuilding Companies, Each With One Million Capital, Obtain Charters

The largest companies incorporated during the past week were: Leonard Tractor Company of Canada, Limited, Montreal, Que., $1,000,000; British American Shipbuilding and Engineering Company, Limited, Vancouver, B.C., $1,000,000.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are provisional directors:—

Canford Mill, B.C.—Nicola Pine Mills, Limited, $300,000.

Wiarton, Ont.—Boat Lake Telephone Company, Limited, $750. W. A. Shier, F. Buckland, W. Bonesteele.

Strathroy, Ont.—The Mihell and Gill Company, Limited, $18,000. J. H. Case, A. I. McCubbin, A. M. Mihell.

Ottawa, Ont.—Civilian Publishing Company, Limited, $25,000. A. C. Campbell, W. J. Cantwell, T. H. Burns.

Virden, Man.—Scales, Carscadden, Rothnie, Limited, $50,000. E. J. Scales, S. S. Carscadden, G. A. Carscadden.

Brantford, Ont.—The Flax Harvester Company, Limited, $1,000. T. H. Tombyll, J. B. Pickering, W. D. Christianson.

Kincardine, Ont.—The J. B. Watson Furniture Company, Limited, $50,000. J. B. Watson, C. A. Watson, W. J. Rooney.

Parry Sound, Ont.—The North Star Publishing Company, Limited, $40,000. J. Ludgate, M. H. Limbert, E. E. Armstrong.

Village of St. Jean Baptiste, Man.—Farmers' St. Jean Baptiste Elevator, Limited, $10,000. A. Ayotte, R. Comeault, N. Dery.

Portage la Prairie, Man.—Armstrong Independent Fisheries, Limited, $500,000. D. D. McCallum, J. R. Colwill, J. Young.

Montreal, Que.—The American News Company, Limited, $500,000. L. A. David, L. P. Crepeau, S. H. Bush; Glovers-Craft, Limited, $100,000. E. Jasmin, R. Poisson and Rene de la Durantaye; Leonard Tractor Company of Canada, Limited, $1,000,000. W. W. Skinner, W. G. Pugsley, G. G. Hyde.

Vancouver, B.C.—Cawston Machinery Company, Limited, $10,000; Port Edward Fisheries, Limited, $40,000; Alaska and British Columbia Fisheries, Limited, $100,000; Adels-Ripley Sales Company, Limited, $9,000; British-American Shipbuilding & Engineering Company, Limited, $1,000,000; Central Athletic Club, Limited, $10,000.

Winnipeg, Man.—International Silver Black Fox Company, Limited, $150,000. C. P. Ellis, B. S. Evans, S. R. Flanders; Carrot River Colonization Company, Limited, $150,000. J. A. Joseph, S. Lawler, J. H. Brett; the Western Paint Company, $200,000. J. E. Guertin, L. P. Guertin, L. Guertin; Peaker Brothers and Company, Limited, $250,000. J. E. Peaker, C. A. Peaker, J. Gordon.

Toronto, Ont.—Oxford Securities Corporation, Limited, $100,000. G. H. Gilday, H. H. Polley, R. L. Webster; the Ohio Tuec Vacuum Cleaner Company, Limited, $50,000. J. M. Bullen, H. L. Steele, W. Osborne; Commonwealth Steamship Company, Limited, $750,000. J. M. Bullen, H. L. Steele, W. Levy; Acme Engineering Company, Limited, $125,000. E. R. Lynch, D. B. Coleman, F. A. "It is hardly likely that I would be guilty of making such a silly proposition," was the comment of Lord Shaughnessy, president of the Canadian Pacific Railway, when his attention was directed to rumors which announced that the company would dispose of the railroad to the government. The rumors intimated that the shareholders would retain the hotels, steamships and land of the company and expect a guaranteed dividend of 7 per cent.

SHOULD INVESTIGATE FUEL RESOURCES

Further Comments of the Press Regarding Important National Problem

Nova Scotia has more than 10,500,000,000 tons of bituminous coal, New Brunswick 161,000,000 tons, Ontario has a small quantity of lignite, Quebec and Prince Edward Island have none. The western provinces have many billion tons of lignite, and Alberta has in addition to lignite 845,900,000 tons of semi-anthracite, 218,000,000 tons of bituminous and well up to 1,000,000,000,000 of sub-bituminous. British Columbia has nearly 80,000,000,000 tons of bituminous coal. Besides lignite and sub-bituminous coal there are reserves in Canada of 313,000,000 tons of bituminous and 845,900,000 semi-anthracite coal, although a small part of this lying in remote and frigid regions may not prove available. The peat bogs of Canada are estimated to produce 28,000,000,000 tons equal in fuel properties to 16,000,000,000 tons of good coal. With these resources, can we not by investigation and application solve our fuel problem in Canada? Mr. Arthur V. White, the consulting engineer, who has made a study of this subject and who has contributed several valuable articles to *The Monetary Times* regarding it, said in our issue of January 4th last;—

"Canadians need never expect to have electrical energy replace coal and other fuel for heating purposes except to a relatively limited extent. We must direct ourselves to the development of our coal resources."

No Abuse of Assets

"By intelligent and thrifty use, the natural resources of Canada may beneficently serve the needs of a large population," says the *Daily Record*, Niagara Falls. "If, however, Canadians become really dependent upon necessary commodities supplied them by other countries, they must be prepared to accept the circumstances in which they may suddenly find themselves if the supply of such commodities is cut off. Such circumstances will be aggravated by any abuse of our assets."

Commenting upon Mr. White's statement that the supply of coal is far from being inexhaustible in the United States and that we may naturally expect to be obliged in the near future to depend on our own resources, the *Electrical News*, of Toronto, says:—"In other words, the temporary crisis of the past month will become a permanent condition, the solution of which must rest with ourselves. In that sense our troubles might prove to have been a blessing in disguise if they succeeded in impressing upon us the necessity of getting ready for that inevitable event of which we can now, from our recent experience, form some reasonable estimate. How soon that may be is problematical. Our neighbors to the south have been tremendously 'white' during the crisis just passed, but let us not forget that their resources are limited, and that charity begins at home. The necessity to withhold export to Canada may arise sooner than they, or we, expect. For a permanent crisis, such as we have just had a taste of, and which may come to-morrow, shall the people of Canada not do well to hold themselves in readiness, so far as is humanly possible, by conserving for our own people the heritage Providence has willed us?"

Demands National Action

"When coal is so scarce and heat becomes so dear, would it not be possible for inventive genius and enterprise to utilize our waste, our refuse, and make it a benefit, instead of a costly nuisance to remove?" asks the Peterborough *Evening Examiner*. "The whole fuel problem of Canada demands national action, and the more so that the problem can be solved," it adds. "This is shown by the conclusions of an article contributed to *The Monetary Times* by Mr. A. V. White. This war has worked revolutionary conditions in all arenas of national, domestic, and individual life, and necessity compels us to face new conditions with adequate measures for meeting them."

"The lesson of the present fuel shortage will be lost upon us if it does not at once stir us into action to guard ourselves against such a state of affairs in future winters," is the reminder given by the Toronto *Mail and Empire*, which continues:—"It is not enough that it steels us to bear the cold with more stoicism, that it drives us to makeshifts to warm ourselves, or even to panicky measures to obtain coal. It ought to have the effect of stimulating us to immediate and untiring activity to lay in an adequate fuel supply for next winter. Once we get out of the clutches of zero weather and feel the genial warmth of a forward spring, we tend to forget our worries about fuel and to give rein to the old happy-go-lucky propensity. Governments are not freer from this weakness than is the average citizen. It is necessary to make the utmost out of the pains and privations and haunting experience of others' miseries the present coal shortage is bringing us. That ought to be enough to impel public opinion and public authority upon a strong campaign to solve next winter's fuel problem in advance.

"The task of government is to devise the policy and make the transportation arrangements for distributing the fuel, and in this task Mr. White considers the provincial governments should co-operate with the federal government. When the season of navigation opens none of the vessels coming up the St. Lawrence should lack cargo. Now that the government has control of the Canadian Northern Railway it can supply the railway connection that may be necessary to forward Nova Scotia coal into the heart of Ontario. Many of the smaller vessels can come right into the lakes from Cape Breton ports, and there will be no trouble finding cargo to carry back. There is still a large reserve of fuel in the woods of Old Ontario. Labor can be got by co-operation among neighbors to cut up into cordwood or stove lengths the fallen and dead trees that are a fire risk to the forest. These are matters which the government should give immediate and thorough attention, and plan to direct the carriers and the workers accordingly."

Government Has Information

Quoting Mr. White's statement that there is no need to start again learning the A.B.C. of this fuel problem, the London (Ont.) *Advertiser* reminds us, that "full information is in possession of the government. To carry out measures of relief and to place Canada in a reasonably independent position will take time, but under proper direction the country can be relieved of a menace which threatens not only her economic life, but the physical life and well-being of a large proportion of her population."

The Vancouver *Daily Sun* says:—"There is plenty of peat and lignite on the prairie districts as well as in the east. Mr. White points to his moral by calling attention to the price of coal in France and Italy, where it is $50 a ton, and he remarks that an advance of even ten dollars a ton over present prices in this country would cost the people an extra $50,000,000 of yearly outlay. From this, he draws the conclusion that a million dollars, or even a few millions of dollars if necessary, placed at the disposal of technical officers assisted by men of sound commercial judgment, in order to get Canada's lignite and peat resources under national development 'constitutes so intrinsically small a sum in comparison to the results as to be practically unworthy of debate.' No doubt Mr. White is entirely in the right. The subject is one with which the Dominion government should busy itself without delay. The amount of money required is insignificant in comparison with the benefits to be obtained."

Must Furnish Solution

"It is scarcely necessary at the present time to emphasize the importance of the fuel problem," says the Woodstock *Sentinel-Review*, "but the lessons of the present winter, severe as they are, will be lost unless they lead to some definite action to furnish a solution. It is for the purpose of drawing public attention to the real nature of the problem and of pointing the way to a solution that Mr. White's article has been written. The conclusion of the whole matter is that there is no need for Canada with her vast resources of fuel and water-power to go cold, or to have her industries checked by lack of power; but she may expect serious times ahead unless every effort possible is put forth, without too much delay, to deal with the situation in a comprehensive way. Mr. White has rendered a valuable public service by drawing attention to this problem at this time."

WHEAT VIA PANAMA CANAL

Vancouver's first bulk shipment of grain has arrived safely at a British port. A steamer which was loaded at the government elevator in Vancouver early in November with 100,000 bushels of wheat from the prairies made the journey safely to the United Kingdom, via the Panama Canal, and now word is awaited anxiously as to the condition in which the grain in this test shipment reached its destination.

The shipment was accompanied by Mr. A. W. Alcock, of Winnipeg, grain expert and assistant chemist of the Canadian Board of Grain Commissioners, who is to observe the condition of the grain at all stages of the voyage.

PROVINCIAL GOVERNMENT BONDS

Issues Amounting to $6,630,000 Sold This Year to Date—Ontario's Loan Explained

The sale of $3,000,000 6 per cent. 10-year bonds of Ontario province makes the fourth provincial government issue of the year. The first provincial borrower was Saskatchewan, which marketed $630,000 5 per cent. 15-year bonds with little publicity. The four provincial government issues to date are as follow:—

1918	Government	Amount	Securities	Rate %	Term years	Offered to Yield Investors %
Jan.	Saskatchewan	$ 630,000	Gold bonds	5	15	6½
Jan.	Manitoba	1,000,000	Gold bonds	5	2	6¼
Jan.	Manitoba	1.000,000	Gold bonds	6	10	6¼
Feb.	New Brunswick	1,000,000	Coupon gold bonds	6	10	6⅛
Feb.	Ontario	3 000,000	Coupon gold bonds	6	10	6
		$6,630,000				

In all cases, the issues were approved by the Priority Board of the Department of Finance, Ottawa. The Saskatkatchewan issue was offered privately by a syndicate of bond houses and was taken in a few hours. The Manitoba issue quickly followed. The 2-year bonds were offered at 96.97 and the 10-year bonds at 98.16, both "and interest." The New Brunswick issue was made at 99.08 and accrued interest, while the Ontario bonds were offered at par. The four provincial government issues this year to date total $6,630,000, compared with $6,382,500 for the entire twelve months of 1917.

Impossible in New York.

Explaining the loan of $3,000,000 last month, Hon. T. W. McGarry, provincial treasurer of Ontario, said that a loan in New York would have been impossible at less than 8 per cent. The bond brokers in Toronto at first would not guarantee to purchase bonds at 6½, but they were willing to take an option on them. He then saw Sir Thomas White, finance minister, and made arrangements for money at 6½ per cent. On February 4th, Sir Thomas White asked him to feel out the market in Toronto, and place a loan in Ontario, if possible.

"We had in mind that the Dominion government must go into the market this year for $400,000,000 at least," said Mr. McGarry. When he commenced negotiations with the Toronto brokers he specified that the loan should be at better terms than 6½ per cent., and he gave three companies: Messrs. A. E. Ames and Company, Messrs. Wood, Gundy and Company and the Dominion Securities Corporation, authority to place $2,000,000 of Ontario bonds at 6 per cent., provided they could place these bonds where they would not interfere with Dominion financing, and on the understanding that the investors who bought them undertook that the bonds would not be placed on the market. What the bond dealers got was the right to feel out the market. No sale took place and no communication came from them between February 4 and February 18, when Mr. Wood intimated that they had succeeded in placing the $2,000,000 in such a way that they would not come into competition with Dominion bonds. Later, Mr. Wood said they could place another $1,000,000. The province would probably require $8,000,000 for capital expenditures this year, most of it for the Hydro-Electric. The money will cost 6.3166 per cent. The loan was not finally put through until last week.

Average Sale Price, 97.66.

Mr. McGarry said that in his judgment no government in Canada had placed a loan recently on such favorable terms. "It would have been unfortunate if the province had not been able to place the loan, and consequently no announcement was made in the papers," said Mr. McGarry. "There has been no commission paid by the province. The $2,000,000 issue was sold at 97 and the $1,000,000 at 99, the average being 97.66."

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended February 22nd, 1918:—

Kerr Lake Mines, 59,408; McKinley-Darragh-Savage Mines, 86,592; O'Brien Mine, 64,320; Dominion Reduction Company, 82,000; Buffalo Mine, 240,965. Total, 533,285 pounds, or 266 tons.

The total shipments since January 1st, 1918, now amount to 1,392,459.8 pounds, or 6,962 tons.

SASKATCHEWAN FIRE LOSSES

Mr. A. E. Fisher, fire commissioner and superintendent if insurance for Saskatchewan, in an address at a recent meeting of the Moose Jaw Fire Agents' Association, stated that during the past year in Saskatchewan there was sufficient wheat destroyed by fire to feed all the cities of the province for a period of twenty months. Fire caused the loss of twenty-three lives in the province and the serious injury of fifteen other persons, and the financial toll of fire in Saskatchewan last year totalled $2,750,000.

LONDON MUTUAL FIRE INSURANCE COMPANY

Judging by the balance sheet of the London Mutual Fire Insurance Company for 1917, the corporation has not only made a substantial profit on its operations for the year, but has also improved its position and increased its reserve strength. The result of the year's business was a profit of $40,656 after providing for all bad and doubtful debts and outstanding liabilities. Of this amount, $15,000 has been set aside as a reserve for possible future losses on investments, and the balance ($25,656) has been added to the surplus. The net premium income for the year was $399,923, an increase of $36,239, while both the loss and expense ratios have been satisfactory.

The reinsurance reserve (full government sandard) stood at $279,095, an increase of $6,763; the cash surplus, $141,559, an increase of $25,656; and the capital stock paid up at $19,250, an increase of $1,750. The total cash security for policyholders was $502,417, an increase of $31,301, in addition to which there is the unassessed portion of premium notes, which amounts to $250,999, an increase of $3,507, making the total security to policyholders $753,417, an increase of $34,808, and a total surplus to policyholders of $411,808, an increase of $30,913.

The company held its annual meeting last week, when a very satisfactory financial statement was presented. Mr. A. H. C. Carson is president of the company, devoting his entire time to the promotion of its interests. Mr. F. D. Williams, the manager, is attached to the Royal Flying Corps, but is able to give a part of his time to the company's affairs. The directorate comprises Messrs. A. H. C. Carson, president; R. Home Smith, vice-president; directors, F. D. Williams, A. C. McMaster, W. T. Kernaham and H. M. Cowan.

IMPORTANT VISIT TO WASHINGTON

Ottawa despatches, discussing the visit of Sir Robert Borden, premier, and Hon. A. K. MacLean, acting finance minister, to Washington, point out that at the present time Canada is buying at the rate of about four hundred million dollars more per year from the United States than the United States buys from Canada. Iron and steel supplies, coal, etc., are needed by Canada from across the border in larger quantities than ever before. Much of the raw materials brought in are afterwards sent in the form of munitions, etc., to Britain, which asks Canada to finance her credits for all war supplies purchased here. Canada has to pay the United States for goods imported, and the adverse trade balance must be taken up in gold or credit. Great Britain's adverse balance with Canada has so far been taken up with credits furnished by the Canadian treasury through domestic loans. Great Britain can still get loans from the United States, but Canada is asked to raise all necessary cash within her own resources.

In consequence of the adverse trade balance with the United States and the gold scarcity, rates of exchange between Canada and the United States are such as to prohibit further purchases by Canada unless credits are continued.

While nothing official is obtainable as to the proposals in view to remedy the situation, it is understood that what the Canadian ministers hope to secure is an agreement with the British and United States governments for reciprocal credits, balancing Canada's payments due across the border with Britain's payments due here. This, it is said, will be done through the medium of a new British credit established with the United States government, against which Canada might draw in liquidation of the amount owed by Britain to Canada. This system of cross-balancing would remedy the exchange situation, and provide for a continuance of the flow of supplies from the United States to Canada and from Canada to Britain.

Your Wife and Children

As you go to and from business, day after day, do you feel the reassurance that comes to the man who has **made his Will** and has provided for a just and equitable distribution of his Estate through an Executor? If not, we suggest that you have your solicitor draw up your Will and name The Toronto General Trusts Corporation as your Executor.

HENRY P. GOODERHAM, President J. M. McWHINNEY, General Manager.

$2.21 WHEAT AND CHEAP LAND

To those farmers and investors desirous of acquiring good land at low prices and on easy terms, convenient to railway and market, we offer certain assets belonging to Trust Estates under our care, and which must be realized on. Some of those parcels are improved, others raw prairie, comprising 160 acres and upwards to blocks of 10,000 acres or more. With the likelihood that wheat will go even higher than it is to-day, we believe the time to buy agricultural land is *now*, as prices of farm products will, we believe, remain high for an indefinite time to come.

RAILROAD RATES INCREASE

Arguments of the Railroad Companies Presented to Board

The Canadian Pacific Railway, the Grand Trunk, the Grand Trunk Pacific and the Canadian Northern, have submitted their replies to the government on the appeal against increased passenger rates. The Railway Commission had authorized a general increase of 15 per cent. Against this decision there was an appeal to the Governor-in-Council by the province of Manitoba, the Winnipeg Board of Trade, the United Farmers of Ontario, the Western Retail Lumbermen's Association, the Canadian Credit Men's Trust Association, and the Canadian Council of Agriculture. After the hearing of argument, the cabinet adjourned the hearing till March 1. At the same time it was announced that the increase would be suspended till March 15. The appeal against the increase was supported by a number of other organizations.

All the railway companies ask that the appeal shall be dismissed. The Canadian Pacific Railway takes up the allegation that the increase would impose an additional burden of $40,000,000 a year on the people of Canada, and that of this, $20,000,000 would go to the Canadian Pacific Railway. The Canadian Pacific Railway, in replying, said: "The most careful estimate made by the traffic, operating and financial officers of the railway is that, had the rates became effective on the date fixed by the order of the Board of Railway Commissioners, the increase in gross revenue to the Canadian Pacific Railway during the calendar year 1918, based upon the tonnage of 1917, would be approximately $13,000,000."

The estimated increase is made up as follows: Estimated freight increase, $11,446,000; passenger traffic manager estimates that by ignoring British Columbia local business, military, coolies and interline will be $2,500,000; total, $13,946,000. If the board's order had been effective on February 1, the 11 months would have equalled $13,016,000. If the rates are made applicable from March 15, the increase this year will be $12,622,000.

"It must not be forgotten," the Canadian Pacific Railway memorandum proceeds, "that this increase is based entirely upon the continuance of the gross business of the company at the high level of 1917, when the company's gross earnings were the largest in its history."

Due to Low Capitalization.

The company's surpluses are due entirely to its low capitalization and not to excessive earnings. The position of the company is such that its revenues do not reflect the actual return on its capital investment, due to the fact that large amounts have been invested in cash in its properties, which are not represented by outstanding securities.

The memo adds that cash investment in the Canadian Pacific Railway exceeds $800,000,000. The par value of bonds, debenture stock, preference stock, common stock and equipment obligations is given as $570,000,000, leaving $230,000,000 invested in cash, not represented by securities of any kind. Net earnings of the company for the calendar year 1917 are declared to be about $46,000,000, or 5¾ per cent. on cash invested. "At the present time," the memo continues, "the return on the amount invested is less than the actual value of money in the open market.

"The petitioners suggest the taking over as a war measure by the government of the organization and financial control of the railways as a fighting unit under one system.

"It is difficult to characterize the suggestion in moderate terms. Even if the facts were as the petitioners state them to be the solution would amount to confiscation and destruction of the property, credit and organization of the Canadian Pacific Railway Company.

Would not Mean Efficiency.

"The petitioners assume that under government administration or control, more efficiency could be developed and more service received from the property of the Canadian Pacific Railway than under its present administration. With proper deference to the views of the adherents of government ownership and operation, it is contended that neither theory or experience justifies such an expectation. The suggestion made would not bring about co-ordination, co-operation and efficiency, but would be a temporary seizure by the government of the property and assets of the shareholders of the Canadian Pacific Railway in order that money belonging to them might be devoted to the maintenance and financial assistance of the unproductive railways to which the country has fallen heir."

The memo adds that there is nothing in the war measures act to authorize any such step.

The memoranda of the Grand Trunk, the Grand Trunk Pacific and the Canadian Northern take up in turn the points advanced by the petitioners and argue that there should be no interference with the ruling of the Dominion Railway Board.

SASKATCHEWAN COMPANIES ACT

Some minor amendments have been made to the companies act of Saskatchewan. Incorporation may now be refused to any company whose name or part of whose name includes any of the following words: "Imperial," "Crown," "Kings," "Queens," "Empire," "Royal," "Dominion," "Saskatchewan," or words of similar import. In future building and contracting companies and agencies will be liable to a tax on their authorized capital, similar to any mercantile company.

A penalty is now provided to be enforced against any company which fails to make returns, giving certain particulars as to their business, which are called for under this act. The penalty is $5 per day for every day during which the default continues. An alteration in the schedule now provides that the annual meeting of a company shall take place not more than eighteen months after the last annual meeting.

NORTHWESTERN LIFE ASSURANCE COMPANY

A satisfactory statement was presented at the recent annual meeting of the Northwestern Life Assurance Company. The company's assets, which amount to $78,542, show an increase of $36,747, or 90 per cent., during the year. Occasionally the younger life insurance companies include in their statement of assets stock notes and balances owing by shareholders, omitting the paid-up capital from the liabilities. Some of the companies reporting to the Dominion insurance department include the total of their Victory bond purchases in their assets while showing the balance to be paid on the liabilities side. Had this company followed these practices in the preparation of the present report, total assets of $286,634 would have been shown, and a surplus to policyholders of $128,402. The company has preferred the more conservative method.

Despite the fact that the company wrote more than $500,000 of business last year, it was possible to increase the surplus by over $3,000. This company has reached, comparatively early in its career, the point at which it is earning surplus. The total life assurance premium income was $30,282, while total expenses of management, including all commissions to agents, represented only $17,251. So far as we know, this is the first Canadian company to show an excess of premium income over management expenses in the second year of operation. The total revenue was $42,623.

"These results have been accomplished," said an officer of the company to *The Monetary Times*, "in the face of the fact that we are putting up reserves greatly in excess of the requirements of the Dominion Insurance Act. There is only one other Canadian company that places all its reserves on the same basis as ours, but, as we treat all whole life and twenty payment policies as endowments maturing at age 85, the reserve which we would provide on such policies would be greater than theirs, thus justifying our claim that our reserves are on the highest basis yet reached by any Canadian life company." Not a single death claim has as yet been reported. Mr. H. R. S. McCabe, who has had considerable experience in the life insurance business, is the managing director of the company. Mr. F. O. Maber is secretary and Mr. W. J. Bright, treasurer; Mr. W. R. Milton, president, and Mr. J. F. C. Menlove, vice-president. Dr. J. A. Gunn, M.D., and Dr. W. A. Clark, M.D., constitute the medical board.

The company wrote $200,000 of new business in connection with its offer to give purchasers ten years to pay for their Victory bonds. This enabled many people to purchase bonds for amounts much larger than would have been otherwise possible. Judging by its financial statement, the company is making good progress.

The Hamilton Provident and Loan Society

Notice is hereby given that the Forty-sixth General Annual Meeting of the Shareholders of this Society will be held at the Society's Office, in Hamilton, on Monday, Fourth day of March next, at twelve o'clock noon, for the purpose of electing Directors to serve for the ensuing year, and for all other general purposes relating to the management of the Society.

A full statement of the Society's affairs for the year ending December 31st, 1917, will also be submitted to the Meeting.

"INVESTMENTS"

A MUCH MISUSED TERM

Many who should be, and think they are laying up money for their old age, are misled into so-called "Investments," where their hard-earned money is jeopardized, and frequently lost, though it is of the utmost importance to them and to those who may be dependent upon them that its absolute safety should be beyond peradventure.

To those who should invest safely and with caution, not speculate, the bonds of the Canada Permanent Mortgage Corporation can be confidently recommended. This Corporation is most conservative in the investment of the funds entrusted to it. For more than sixty years it has held a leading position among Canada's financial institutions, and its bonds are a LEGAL INVESTMENT FOR TRUST FUNDS. They are issued for one hundred dollars and upwards. Write for full particulars.

FARM PRODUCTS, $607,828,465

That was Saskatchewan's Record in 1917—Farming as a Profitable Business

The statistics branch of the Saskatchewan Department of Agriculture have issued their final report of the grain crops and live stock of the province. These statistics were prepared in co-operation with the Census and Statistics Office of the Dominion government, and it is, therefore, considered that the estimates given are more accurate than ever have been presented before.

In addition to the crop report, an estimate of the revenue to Saskatchewan farmers during 1917 has also been prepared which shows that, although the grain crop of last year was below the average, the price obtained made farming a most profitable occupation.

The statement of the acreage prepared for crop for this year is most gratifying, as it indicates that with average weather conditions during the seeding time the land under crop will show a marked increase.

Revenue to Saskatchewan Farmers.

The following statement shows the estimated value of the products of Saskatchewan exported during the season of 1917:—

	Bushels.	Price.	Value.
Wheat	94,000,000	$1.95	$183,300,000
Oats	25,000,000	.62	15,500,000
Barley	2,500,000	1.00	2,500,000
Flax	4,500,000	2.60	11,700,000
Butter	....	....	500,000
Wool clip	....	....	334,400
Furs, game	....	....	1,750,000
Poultry	....	....	3,290,525
Horses	443	....	77,525
Cattle	110,926	....	7,764,820
Sheep	5,711	....	79,954
Swine	140,095	....	2,801,900
Total			$229,599,124

Yield and Value of Products.

The following is the final estimate of the acreage, yield and value of the products of Saskatchewan to the farmer in 1917:—

	Acreage.	Production.	Yield per acre.	Price.	Value to producer.
Wheat	8,273,253	117,921,300	14.2	$ 1.95	$229,966,900
Oats	4,521,642	123,213,600	27.2	.62	76,392,400
Barley	669,927	14,067,900	21.0	1.00	14,067,900
Flax	753,700	4,710,600	6.2	2.60	12,247,600
Rye	53,269	1,118,000	21.0	1.70	1,900,600
Potatoes	67,700	9,010,000	133.0	.85	7,659,000
Roots	11,104	1,727,000	155.5	.91	1,572,000
			Tons.		
Hay, fodder.	260,275	369,600	1.4	10.12	3,740,000
Alfalfa	9,500	15,300	1.6	13.40	205,400
Fodder corn.	15,658	31,300	2.0	8.00	250,400
Butter, milk, cream, ice cream					8,600,000
Wool clip					334,400
Game furs					1,750,000
Garden products					1,250,000
Poultry and products					4,465,525

Value of Live Stock.

Horses, mules		888,673	$142,187,680
Cows (milk)		354,403	35,440,300
Cattle	Bulls	17,077	52,401,220
	Calves	283,371	
	Steers	129,787	
	Others	426,452	
Sheep		127,892	1,918,380
Swine		573,938	11,478,760
Total value of products to the farmer			$607,828,465
Total value of live stock			243,426,340

Mr. John Paris Bickell, the new president of the Temiskaming Mines, Limited, is also president of the McIntyre Mines, Limited, and of Consolidated Atizona Superstition Mines, Limited. He is a financial broker and has been prominent in the market in Toronto for some years.

LIFE COMPANIES' WAR INVESTMENTS

Actual Total of Conversions Probably Was Over $20,000,000

Commenting upon the table compiled by *The Monetary Times* and printed in the issue of February 15th, regarding the investments of life insurance companies in our four war loans, The Toronto Globe says:—

"The table of *The Monetary Times* shows that the insurance companies converted over $18,000,000 of old loans into the Victory bonds. As details of conversions made by two or three companies (one of them being the Sun Life) were not included in the table, it is to be presumed that the actual total of life insurance conversions exceeded $20,000,000. On analyzing the conversions it is seen that a comparatively small amount of the old bonds converted were eligible for taking up the five-year Victory bonds.

Gives Highest Yield.

"A section of the expert investment public has held that the five-year issue of the Victory Loan represented the best buy, because it gives the highest yield, and because, being short-dated, it is not likely to decline as much as the others in an unfavorable market. The opposite theory is that the 20-year Victory bonds are the best, because they insure to holders an abnormally high return for a long term of years, and because they can rise to much higher levels if the war ends shortly and the heavy government borrowings cease. The life companies in the list above referred to were allotted about $12,000,000 of the 1925 war loan, which was the only one eligible for conversion into the 1922 maturity of the Victory Loan.

Open Market Purchases.

"One large United States company which was allotted $1,000,000 of the first war loan converted it into Victory bonds, and a Canadian company which received $500,000 of the 1925 loan, subsequently purchased $325,000 of the same, and turned in the whole amount to the Victory bonds. In both cases these old bonds would be eligible for taking up the new five-year bonds. Another Canadian company which originally received $500,000 of the 1925 issue bought $335,000 more, and then changed the whole lot into the second war loan, which, of course, could be used only for taking up the 20-year Victory bonds. Still another large Canadian company was allotted $1,500,000 of the first war loan and changed the whole investment later into the third war loan.

"In various cases there were recorded substantial purchases by the insurance companies of first, second and third war loans. It will be remembered that there was an active market at rising prices for the first two loans after the subscription lists closed, and purchases made on these occasions would likely be at prices above the net cost to subcribers.

"After flotation of the third loan, however, the insurance companies and other investors had the opportunity of buying all three of the war issues several points below the issue price; and doubtless some of them then made substantial purchases.

Will not Buy Heavily.

"In view of the large amounts of the Victory issue now held by them it is scarcely expected that the life companies will be extensive buyers of those bonds under the present arrangement whereby the price is fixed at 98⅞. The instances quoted here are interesting in that they throw a side light on the investment policies of the great insurance companies."

SASKATCHEWAN WORKMEN'S COMPENSATION ACT

An entirely new section has been added to the Workmen's Compensation Act of Saskatchewan to the effect that when an accident results in death, and when the deceased's executor, acting on behalf of the dependants of the deceased, arrives at a settlement of the claim with the person against whom the claim is laid, either party may apply to a judge of the district court, or if any of the dependants are minors, to the official guardian, for an order confirming the settlement. If it is confirmed, then the party against whom the claim is made shall be discharged from all further claims thereunder.

NEW ISSUE

Offering of

$6,900,000

Five Year 6% Refunding Gold Bonds

CITY OF MONTREAL

DATED 1st DECEMBER, 1917 DUE 1st DECEMBER, 1922

Interest payable half-yearly—1st June and December.

Principal and Interest payable in Gold at the City Treasurer's Office, Montreal, or at the Agency of the Bank of Montreal, New York.

Bonds issued in Coupon form in denominations of $100, $500 and $1,000.

ISSUE PRICE—PAR.

A full half year's interest will be paid 1st June, 1918.

The bonds therefore give a net yield to the investor of about 6½%

THE BANK OF MONTREAL, Fiscal Agent of the City of Montreal, is authorized to offer the above-named bonds for public sale on behalf of the City, at par, without accrued interest, payment to be made in full on 8th April, 1918, against delivery of the bonds at any Branch, in Canada, of the BANK OF MONTREAL, or of any bank the applicant may specify, or at the Agency of the BANK OF MONTREAL, New York or Chicago.

The issue is made to refund a like amount of Montreal Three-Year 5% Notes, the original issue having been made for public works, in anticipation of a permanent loan.

Beginning 25th February, 1918, applications for the bonds will be received by the BANK OF MONTREAL, MONTREAL, or any of its branches, from whom application forms and copies of the prospectus giving full particulars of the issue may be obtained on request. The offering is subject to withdrawal on or before the 18th March, 1918.

Applications should be addressed to the

BANK OF MONTREAL, MONTREAL

and should contain full instructions as to place of delivery and payment suitable to the applicant, and the denominations of bonds required.

The issue is made with the approval of the Minister of Finance, Ottawa.

THE STANDARD BANK OF CANADA

The Forty-Third Annual Meeting of the Shareholders of the Standard Bank of Canada was held at the Head Office of the Bank, 15 King Street West, Toronto, on Wednesday, the 27th of February, 1918, at 12 o'clock noon.

Amongst those present were the following:—H. T. Carswell (Oshawa), W. F. Allen, J. P. Owens (Oshawa), J. S. Turner (Winnipeg), W. F. Cowan, Jesse Ashbridge, F. W. Cowan, C. H. Meredith, Jas. Hardy, N. L. McLeod (Calgary), N. C. Stephens, Wellington Francis, K.C., A. A. Drummond, John Elliott, Dr. Chas. O'Reilly, H. Langlois, C. M. Gripton, F. Biette (Chatham), W. J. Martin (Penetanguishene), Wm. Crocker, T. H. Wood, R. H. Cosbie, E. A. Bog, David Kidd (New York), H. R. Playter, M. McDonald, Ven. Archdeacon Warren, J. K. Niven, G. N. Brown, W. Gillespie, J. C. Black, Henry Swan, W. C. Boddy, F. Russill, J. W. McLaughlin (Oshawa), C. H. Easson, Lieut.-Col. C. A. Denison, J. R. Howard, F. LeM. Grasett, M.B., Geo. Blaikie, Jas. E. Baillie, Wm. Harvey, H. C. Boomer, J. K. Fisker, H. S. Loudon, H. T. McMillan, W. C. Noxon, H. Gooderham, N. Gash, R. C. Babbitt, F. H. Gray, Lewis A. Howard, E. C. Green, Stephen Noxon, Richard Tew, J. S. Loudon, Dr. T. E. Kaiser (Oshawa).

The chair was occupied by the President, Mr. W. F. Cowan, and Mr. E. A. Bog, Chief Inspector, acted as Secretary to the meeting and read the following report:—

The Directors beg to present to the Shareholders the Forty-third Annual Report and Statement of the affairs of the Bank for the year ending 31st January, 1918.

The Net Profits, after making provision for bad and doubtful debts, rebate of interest on unmatured bills under discount, exchange, cost of management, etc., amount to $649,546.44. This amount, together with the balance forward from last year and $120,047.86 for premium on new stock issued, makes the sum of $923,187.93.

This has been appropriated as follows:—

Four quarterly dividends at the rate of 13% per annum	$442,782.77
Contributed to Officers' Pension Fund	20,000.00
Contributed to Patriotic Funds	31,250.00
War Tax on Bank Note Circulation to 31st of December, 1917	33,891.48
Transferred to Reserve Fund from Premium on New Stock	120,047.86
Reserved for estimated depreciation in securities.	100,000.00
Balance of Profit and Loss Account carried forward	175,215.82

Your Directors deeply regret to record the sudden death, in March last, of our late general manager, Mr. George P. Scholfield, who entered the service of the Bank as a junior clerk in 1883; becoming general manager in 1905, and a director in 1912, under whose management the Bank made marked progress. Your Directors appointed as his successor, Mr. Chas. H. Easson, formerly of the Bank of Nova Scotia.

We also regret having to record the death of Mr. T. H. McMillan, who became a director of this Bank in 1909, when the Western Bank of Canada, of which he had been general manager, was amalgamated with this Bank. The vacancies in the Board have been filled by the appointment of Mr. T. B. Greening and Mr. James Hardy, F.C.A.

During the year, Branches and Sub-Branches of the Bank have been opened at Lethbridge, Alta.; Orion, Alta.; Richlea, Sask. (sub. to Eston); and Westerham, Sask. (sub. to Estuary). The Sub-Branch at Cherry Valley and the Branch at Schumacher, Ontario, were closed.

The usual inspection of the Head Office and Branches has been made, and the duties of the staff have been faithfully and efficiently discharged.

The regular audit of the Bank's affairs has also been made by Mr. G. T. Clarkson, F.C.A., whose report is appended herewith. Mr. Clarkson's name will be again submitted at the Annual Meeting for reappointment as Auditor for the ensuing year.

W. F. COWAN,
President.

Toronto, 31st January, 1918.

President.

C. H. EASSON,
General Manager.

AUDITOR'S REPORT TO THE SHAREHOLDERS.

I have compared the above Balance Sheet with the books and accounts at the chief office of The Standard Bank of Canada, and the certified returns received from its branches, and after checking the cash and verifying the securities at the chief office and certain of the principal branches on January 31st, 1918, I certify that in my opinion such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of my information, the explanations given to me, and as shown by the books of the Bank.

In addition to the examination mentioned, the cash and securities at the chief office and certain of the principal branches were checked and verified by me at another time during the year, and found to be in accord with the books of the Bank.

All information and explanations required have been given to me, and all transactions of the Bank which have come under my notice have, in my opinion, been within the powers of the Bank.

G. T. CLARKSON, F.C.A.,
of Clarkson, Gordon & Dilworth, Toronto, Canada.

Toronto, February 18th, 1918.

The President referred to the satisfactory progress made during the year, and the Vice-President, Mr. Wellington Francis, K.C., and the General Manager, Mr. C. H. Easson, also addressed the meeting.

The usual motions were passed and the following Directors were elected for the ensuing year:—W. F. Cowan, W. Francis, K.C., H. Langlois, W. F. Allen, F. W. Cowan, T. H. Wood, T. B. Greening and James Hardy, F.C.A.

At a subsequent meeting of the Directors, W. F. Cowan was elected President, and W. Francis, K.C., Vice-President.

C. H. EASSON,
General Manager.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Brantford, Ont.—February 25—Building, occupied by Joseph Telos, on Ann Street, was damaged. Caused by overheated stovepipe. Estimated loss, $500.

Burlington, Ont.—February 22—Residence of Stewart Bruce at Filman's Corners was destroyed. Estimated loss on building, $7,000; on contents, $3,000.

Cobourg, Ont.—February 22—The Breslin clothing store and stock of Field and Brother was damaged. Estimated loss, $2,000.

East Toronto, Ont.—February 24—The Scarboro' divisional barns of the Toronto and York Radial Railway Company on the Kingston Road were destroyed. Caused by grounded power wire. Estimated loss, $25,000.

Edmonton, Alta.—February 21—Unoccupied building, on Jasper Avenue, owned by the McInnis Lumber Company, was damaged. Cause is thought to be incendiarism. Estimated loss, $3,000.

February 24—The Maryland Hotel, formerly the Empire, and the Drake garage adjoining, containing 100 autos, were destroyed. Estimated loss, $250,000. Insurance carried, $98,000.

London, Ont.—February 19—Mr. Laughton's garage on Wellington Street was damaged. Estimated loss, $1,500.

February 22—Engraving plant of Thomas Knowles, 40 Weston Street, was destroyed. Estimated loss, $18,000.

Moncton, N.B.—February 19—A building, occupied by Roy Spence's grocery store, a Chinese laundry and two families, was destroyed. Estimated loss, $3,000. Insurance carried was $3,000.

Sterling—			
Demand	$4.79.60	$4.79.80	$4.82
Cable transfers	$4.80.85	$4.81.10	$4.83

Rates in New York, sterling, demand, $4.75.25; cables, $4.76 7-16. Francs in New York, demand, $5.72⅝; cables, $5.70⅝. Bank of England rate, 5 per cent.

MONTREAL LIFE UNDERWRITERS HOLD MEETING

The Montreal Life Underwriters' Association took the occasion of the mid-year meeting in Montreal of the members of the executive council of the Life Underwriters' Association of Canada to hold their monthly luncheon at the Queen's Hotel recently. The gathering was one of the largest of the season, and was presided over by Mr. J. P. Rowley, president of the local association.

The guests were: Mr. Lawrence Priddy, of New York, president of the National Association of Life Underwriters of the United States; Mr. Neil D. Sills, of Richmond, Virginia, ex-president of the National Association; and the following officers and members of the executive council of the Life Underwriters of Canada: President, J. T. Wilson, Halifax; vice-president, T. J. Parkes, Sherbrooke; honorary secretary, Geo. H. Hunt, Toronto; general secretary and treasurer, J. H. Castle Graham, Toronto; chairman of executive, Geo. Williams, Montreal; past presidents, W. Lyle Reid, Ottawa; Homer Vipond and A. J. Meiklejohn, Montreal; also the following: J. B. Hall, Toronto; M. G. Bingeman, Toronto; C. E. Bissell, Brockville; T. B. Parkinson, London; W. J. Fair, Kingston; Geo. Alexander, Richmond; W. G. Keddie, Ottawa; A. S. Wickware, Ottawa; C. A. Butler and Chas. C. Gauvin, Montreal.

The meeting was addressed briefly by Mr. J. T. Wilson, of Halifax, president of the Canadian Association, and at greater length by Mr. Lawrence Priddy, of New York, president of the National Association. He said that the entry of the United States in the war on the side of the Allies had obliterated the imaginary line between the two countries, and that the insurance men, who had always been on the friendliest terms, were to come more closely together by holding a joint convention in New York City on September 4, 5 and 6 next. From the plans worked out at the meeting of the two executives this coming convention promises to be one of the largest and most representative gatherings of insurance men held on this continent.

The Canada National Fire Insurance Co.

HEAD OFFICE, WINNIPEG, MAN.

Seventh Annual Report of the Directors:

To the Shareholders:

Your Directors have pleasure in submitting for your consideration their Seventh Annual Report of the Company's affairs, also the Statement of Assets and Liabilities, and Revenue and Expense Accounts for the year ended December 31st, 1917, duly certified by the Company's Auditors.

The year 1917 opened up with practically the same conditions prevailing throughout the country as were experienced in the previous year. While the Dominion was enjoying a large measure of prosperity, due to bountiful crops and abnormally high prices, and the industrial life of our country was unusually active, being greatly stimulated by the war, yet the flourishing conditions in general business which maintained prior to the war, had not been restored to any great extent in some of our leading industries.

Take, for example, building operations which were proceeding a few years ago on such a large scale. While there has naturally been a certain amount of building going on in the ordinary course of events, the proportion, as compared with that of (say) four or five years ago, is relatively very small.

It is well for the shareholders to keep this point in mind when reviewing the progress made by this Company, as new buildings constitute a valuable and important source of business for a Fire Insurance Company.

Our Company had just got nicely started in business when war broke out, accompanied by a general business and financial depression, and a decided falling off in building operations, resulting in a greatly decreased volume of fire insurance, as compared with that available in normal times. In view of this situation, it will be interesting to review the amount of fire insurance written by this Company during the last four years:—

1914	$22,152,139.00
1915	23,223,662.00
1916	21,892,153.00
1917	20,002,346.00

While it is difficult to predict at this early date what will be the results of the present year's operations, your Directors confidently expect that the record of the last few years as regards business written, will be fully maintained and possibly excelled.

The premiums on the gross insurance written in 1917 amounted to $240,824.04, while re-insurance premiums were $82,884.27. The gross amount of insurance in force at December 31st, 1917, was $31,076,730.00, the premiums thereon amounting to $431,604.36.

Total amount of re-insurance in force at the same date was $8,384,803.00, on which the premiums amounted to $108,204.20. The net amount of insurance in force at the close of the year was $22,691,927.00, on which the premiums amounted to $323,400.16.

Notwithstanding the fact that the aggregate fire losses in Canada and the United States were unusually high in 1917, the losses in Canada, exclusive of the Halifax disaster, being about $1,000,000.00 more than in the previous year, the fire loss ratio of this Company was 46.65 per cent. as compared with 67.18 per cent. in 1916.

This is a very gratifying feature of the year's operations, and indicates unusual care exercised by the Underwriting Department of the Company. It is generally understood that war conditions have a material bearing and influence on the number of fires which have occurred during the past three years or more, and special precautions have been taken to counteract this as far as possible.

Regarding the Company's investments, it will be noted that they consist very largely of first mortgages on improved real estate; this item amounting to $1,625,236.20, an increase of $180,872.03 over the previous year. Considering the abnormal times due to the war and other causes, the payments of interest and principal have been reasonably well met. With the margin of security with respect to our mortgage loans, it is not anticipated that the Company will sustain any loss either on our loans or on properties foreclosed by the Company.

With the view, however, of providing for any contingencies arising out of possible depreciation in mortgages, stocks and other securities of the Company, your Directors have deemed it advisable, and in the best interests of the Company, to create a Contingent Reserve Fund, and have, accordingly, set aside to this Fund, the sum of $75,000.00.

In the matter of Stocks, Bonds and Debentures, these amounted to $164,906.11, including some $76,000.00 paid on account of Dominion Government War Bonds. These investments are of a high order and yield a satisfactory rate of interest.

During the year, the Company adhered to its policy of maintaining large cash reserves; the amount in banks and on hand at the end of the year being $223,487.16.

Dominion Government Reserve, which is the Reserve set aside for unearned premiums, amounted to $124,525.92. Re-insurance premiums held on deposit amounted to $56,777.61, practically the same as last year.

Profits from Mortgage investments, stocks, bonds, debentures and other sources amounted to $148,205.93, an increase over the previous year of $4,022.87. Net fire premiums, after the usual deductions for cancellations, rebates and re-insurance, were $157,939.77, while the net fire losses amounted to $73,657.87, as compared with $117,571.07 for 1916, showing a substantial reduction of $43,913.20.

The Expenses for the year showed a falling off of $5,774.58. It will probably be recalled that, in the last Annual Report, attention was drawn to the fact that the Expense Ratio in the Underwriting Department had then reached the low level of 32.80 per cent., which, for a young Company, was considered very satisfactory. Your Directors are doing all in their power to keep the expenses down as low as possible.

Dividends on Capital Stock at the usual rate of six per cent. per annum, amounted to $105,193.59, an increase over last year of $5,957.69. During the year there was paid on account of Capital Stock $53,887.93, the paid-up Capital now amounting to $1,762,048.65.

With respect to Surplus to Policyholders, this item now stands at $2,000,017.06. The Shareholders will be pleased to learn that this Company still maintains the premier position among Canadian Fire Companies as regards Surplus to Policyholders.

In view of its strong financial standing, your Directors feel that this Company, being a purely Canadian one, should receive the liberal support and patronage of the Canadian people.

Due precaution has been taken in the selection of risks, as is evidenced by the low loss ratio maintained from year to year, notwithstanding the unusually large fire losses throughout the Dominion during the past four years.

While the war continues, it is unreasonable to expect the Company to make the material progress which might be anticipated in normal times, nevertheless, every possible effort will be put forth during the present year, and your Directors feel confident that, if the Shareholders will continue to extend their patronage and co-operation, as they have done in the past, the Company will experience another successful year.

In this connection, your Directors wish to cordially thank all those shareholders who have contributed to the success and progress of the Company, and can assure the Shareholders in general, that if they will only heartily co-operate with the Directors and the Management, they will render a great service to their own Company and contribute in no small measure, to its material welfare.

Your Directors wish to express their appreciation of the services rendered by the Officers and Staff as well as the numerous agents of the Company.

J. H. G. RUSSELL, President.

Winnipeg, February 16th, 1918.

The election of Directors for the current year resulted as follows: J. H. G. Russell, W. T. Alexander, D. E. Sprague, J. G. Hargrave, F. H. Alexander, Dr. A. D. Carscallen, E. L. Taylor, S. D. Lazier, R. G. Affleck, Hon. A. C. Rutherford, Edmonton, Alta.; F. N. Darke, Regina, Sask.; Thos. S. McPherson, Victoria, B.C.; Andrew Gray, Victoria, B.C.

At a subsequent meeting of the new Board of Directors, J. H. G. Russell was elected President; Major D. E. Sprague and F. H. Alexander, Vice-Presidents; and W. T. Alexander, Managing-Director.

AUDITORS' REPORT.

To the Shareholders:—

We beg to report that we have audited the Books and Accounts of The Canada National Fire Insurance Company for the year ending 31st December, 1917, and have found them properly stated and sufficiently vouched. We have verified the Cash on Hand and in Banks and the Mortgages and other Securities. In our opinion the Balance Sheet presents a correct view of the state of the Company's affairs as at 31st December, 1917, according to the best of our information and the explanations given us, and as shown by the Books of the Company.

(Signed) D. A. PENDER, COOPER, SLASOR & CO., C.A.

Winnipeg, 16th February, 1918.

SALE OF SHARES ACT IN SASKATCHEWAN

A number of minor amendments have been made to the Sale of Shares Act of Saskatchewan. The provisions of the act will not in future apply to companies incorporated under Section 22 of the Companies Act. These are companies for promoting art, science, religion, charity, etc. A number of amendments have been made to Section 6, detailing the material which has to be filed before the shares are permitted to be sold. Section 9, detailing the conditions under which a certificate permitting the sale of shares may be granted, has been redrawn, but not materially altered.

Without first notifying the local government board, it is not permissible for a company to alter its charter, memorandum of association or incorporation, its constitution or by-laws. If the board is not notified of such a change, the company's certificate may be revoked, and no business may then be transacted until a new certificate has been obtained. The principal amendment, however, relates to the granting of certificates to mining companies in the province. It is, of course, impossible to say, until the mine is developed, whether a fair return upon the shares can be promised, and a special certificate in respect to the sale of shares of such companies is provided for.

The clause dealing with prosecutions and penalties has been redrawn. A person doing anything forbidden by the act, or who fails to observe the conditions or restrictions under which the certificate regarding mining companies is issued, may be fined from $50 to $500, and in default may be imprisoned for a term not exceeding six months, but if the accused was the holder of an agent's license, and was not aware of the revocation of that license, or that his company had forfeited its rights, he shall not be convicted of the offence of selling shares contrary to the act.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

The offering of $6,900,000 five-year 6 per cent. refunding gold bonds of the city of Montreal is the outstanding feature of the municipal bond market. The subscription lists for these bonds opened on Monday and will close on or before March 18th. Undoubtedly, the desirable changes which are being brought into force in regard to the government of the city of Montreal will materially assist the sale of the bonds. The Bank of Montreal, acting as the city's fiscal agent, is making the offer by public sale. The bank will not conduct a selling campaign in the sense of circularizing investors. It is prepared to receive at any of its branches applications that investors may wish to file for participation in the loan. The actual selling campaign in the sense of a general canvass will be conducted through stock exchange firms, bond companies, trust companies, etc., much as in the case of the Victory Loan. These selling agencies will be allowed a commission on the bonds they sell, but their participation in the canvass involves no liability, as would be the case if they were asked to underwrite the bonds. As they secure buyers for the bonds they will turn in their clients' applications and will be granted commissions for the bonds thus placed. They may apply for bonds in their own names, with a view to subsequent sale to clients, but the issue differs from the average loan of the kind, in that it is not being sold in the first place to a syndicate of underwriters, to be distributed by them among investors.

The bonds are being offered at par and are dated December 1st, 1917. As a full half-year's interest will be paid on June 1st, although subscriptions for the issue will not be due until April 8th, the privilege of the first coupon makes the net yield of the bonds about 6½ per cent. The bonds will be issued in coupon form in denominations of $100, $500 and $1,000, with principal and interest payable in gold at the city treasurer's office at Montreal, or at the agency of the Bank of Montreal in New York. The interest dates are June 1st and December 1st. The issue is being made to refund $6,900,000 three-year 5 per cent. notes of the city which fell due in New York last December, temporary arrangements having been made through the Bank of Montreal at the time to finance the maturity. Since 1914 the city has been maintaining a sinking fund at the rate of 4½ per cent. per annum against the ultimate redemption of a permanent loan which was in view when the three-year note issue was sold to New York bankers. The present issue is made with the approval of the minister of finance.

Edmonton, Alta.—As the city has a heavy amount of short-date liabilities maturing this year it must raise about $3,500,000.

Sandwich, Ont.—A block of $72,216.79 10, 15, 20 and 25-year 6 per cent. bonds has been awarded to Messrs. C. H. Burgess and Company, Toronto.

Hamilton, Ont.—On February 18th, the board of control made reductions amounting to $75,000 in the estimates, and the members now believe that they will be able to get along on a 27-mill rate, an increase of 4 mills over last year.

Toronto, Ont.—The total amount of assessment for the year 1918 as returned by assessors is $605,107,430, as compared with the assessment of $588,420,313 in 1917, as finally revised. This makes an increase in 1918 of $16,687,117 which is made up as follows: Land, $2,579,285; buildings, $7,092,708; business assessment, $2,167,859; income, $4,847,265.

Greater Winnipeg, Man.—Over $1,000,000 worth of bonds of the Greater Winnipeg Water District have been sold for further work of constructing the pipe line which is to bring Winnipeg's water supply from Shoal Lake, according to Commissioner Waugh. In view of the success which has attended the issue of small denominations of $100, an arrangement has been made to divide several of the $1,000 bonds into the smaller denomination.

Port Moody, B.C.—The annual financial statement and report has been submitted to the city council for 1917. The general income for the year ended December 31, totalled $30,306, and the general expenditure $19,246, leaving a credit surplus of $11,059. The school accounts also showed an excess of income over expenditure of $1,044. The total land taxes assessed for the year was $36,913, of which $18,024 was outstanding at December 31. The balance sheet showed total assets $265,060 and liabilities $208,141, giving a surplus of assets $56,918. There is a contingent liability of $100,000 secured by the site, buildings and plant of the steel works.

New Westminster, B.C.—Assessment Commissioner Broad has this year placed the total valuation of the city for taxation purposes at $12,191,500. Of this amount $12,115,500 is the assessed land value, and $76,000 is of taxable improvements, mainly buildings on leased waterfront property outside of the improved area. The total is approximately 10 per cent. lower than 1917, which in turn was about 10 per cent. lower than in 1916. The figures for the three years are as follows: 1918—Land, $12,115,500; taxable improvements, $76,000. 1917—Land, $13,458,395; taxable improvements, $81,900. 1916—Land, $14,953,825; taxable improvements, $81,900.

London, Ont.—An offering of $1,346,000 5 and 10-year 6 per cent. gold bonds is being made by a syndicate comprising Messrs. Wood, Gundy and Company, Dominion Securities Corporation and A. E. Ames and Company, of Toronto; 99.47 and interest for 1923 maturity, and 99.08 and interest for 1928 maturity. London is well and favorably known as the financial, wholesale and distributing centre of western Ontario. It is a manufacturing centre of great importance, is situated in one of the best farming centres of Canada, and is substantial in every respect. Probably never before have London bonds been offered on so favorable a basis.

Alberta.—Messrs. W. Ross Alger and Company, Edmonton, have purchased the following Alberta school district debentures: Sutherland S.D., $450 7 per cent. debenture, payable in ten serials; Tipperary S.D., $500 7 per cent. debenture, payable in ten serials; Adshead S.D., $1,200 7 per cent. debenture, payable in ten serials; Donaldson S.D., $1,200 7 per cent. debentures, payable in ten serials; Village of Spirit River, $2,000 6 per cent. debenture, payable in ten serials; Duchess S.D., $2,500 7 per cent. debenture, payable in ten serials; Grande Prairie S.D., $3,000 7 per cent. debenture, payable in twenty serials; Gladys S.D. $2,000 7 per cent. debenture, payable in five serials; Cereal S.D., $3,500 7 per cent. debenture, payable in ten serials; Bow Island S.D., $16,000 6½ per cent. debenture, payable in twenty serials.

Saskatchewan.—The following is a list of authorizations granted by the Local Government Board from February 11th to February 15th, 1918:—

School Districts.—Runnymeade, $2,000 10-years not ex. 8 per cent. instalment; J. H. Mather, Winthorpe. Grafton, $2,000 10-years not ex. 8 per cent. annuity; A. W. Ellery, Calderbank.

The following is a list of debentures reported sold from February 11th to February 15th, 1918:—

School Districts.—Twin Hill, $2,000, Warcop, $1,800; Great-West Life Assurance Company, Winnipeg.

Rural Telephone Companies.—South Forget, $1,100; E. M. Blain, Forget. Kaiser, $1,000; R. J. Hill, Kaiser. Friedland, $3,900; Regina Public School Sinking Fund. Ruddell, $15,300, South Churchbridge, $2,700, Alida, $3,800, Fillmore, $1,300, Storthoaks, $2,400; W. L. McKinnon and Company, Regina.

Village.—Harris, $5,000; C. W. Dickey, Harris.

Toronto, Ont.—City Treasurer Bradshaw submitted a statement to the board of control on Tuesday showing that the gross debenture debt of the city now amounts to $107,217,793, involving an annual charge for interest and sinking fund of $8,901,655. On these annual charges $5,086,565 is raised from sources other than taxation, and $3,815,090 by direct taxation. Debentures to the amount of $100,323,433 have been issued and sold, while the balance of $6,894,360 are still unnegotiated. Attention was directed to the fact that the gross school debt, that is for public, high, commerce, technical, industrial and separate schools, amounted to $14,769,919, necessitating the raising of $883,994 annually. The local improvement debt is $24,920,234, upon which the annual charges for interest and sinking fund are $3,092,315. Of the latter amount $1,183,566 is taken out of the taxes and $1,908,749 is paid by the property owners benefited, and is an

Ottawa Light, Heat & Power Co., Limited

Operating The Ottawa Electric Co. and The Ottawa Gas Co.

OTTAWA, ONTARIO

Twelfth Annual Report

of the Directors

To the Shareholders;

The Directors now submit their Annual Report accompanied by Financial Statements covering the operation of The Ottawa Electric Company and The Ottawa Gas Company for the fiscal year ending December 31st, 1917.

The Ottawa Electric Company has overcome the reductions in rates which were brought into effect early in 1916, and has further overcome the loss in revenue due to the changing of flat rate commercial accounts to the meter system.

The Ottawa Gas Company, early in the summer of 1917, was face to face with the abnormal rise in the cost of coal. To meet this, it was necessary to increase the price of gas from $1.10 gross to $1.25, with the usual 10% discount for prompt payment. While this increase in rate may not be sufficient to fully cover the higher cost of production, the company has, due to new business, and an increased consumption on the part of customers, been able to show substantial increases in gross and net revenue.

The revenues from all sources aggregate $957,300.39, an increase of $123,108.19 over last year.

The expenses of management, operation and maintenance, togethrr with bond and bank interest, amount to $711,159.61, an increase of $108,829.04. This is satisfactory, when it is considered that the extra cost of coal for generating purposes was alone over $70,000.

After deducting from the gross revenue the gross expenditure, which includes bond and bank interest, the net surplus for the year is $246,140.78.

The sum of $109,563.23 has been expended upon Capital Account.

The balance at the credit of Profit and Loss Account with the addition of this year's surplus is $305,017.68. From this four quarterly dividends at the rate of 6% per annum have been paid, amounting in all to $209,945.20. After making provision for bad and doubtful debts, there remains $85,499.48 at the credit of Profit and Loss Account, and $720,000 at the credit of Reserve Account.

All of which is respectfully submitted.

T. AHEARN, *President.*

extra tax upon their properties. No cognizance is taken of this in the tax notices sent out to the ordinary citizens, consequently only those directly affected know what an additional burden this really is.

Burnaby, B.C.—A comparative statement has been prepared by the treasurer of the municipality, showing that in 1913 the city's collection of taxes stood at $379,106, including arrears, against a levy of $586,600. In 1914 the collection was $300,228, with a levy of $467,000. In 1915 the total collection dropped to the lowest point, being only $244,995, while the levy for that year was $408,900. The increase on receipts commenced in 1916 with the total collection $273,327, while the levy dropped still lower than the previous year, coming down to $386,500. Last year collections were even better than in 1916, standing at $290,912, the levy coming down to $372,100. Since 1913 the levy for taxes has dropped to $214,500. The assessment has also been lowered proportionately, going from $21,000,000 in 1913 to $16,000,000 at the present time. The mill rate for 1918, although not confirmed by the council, has been set at 20 on improved land and 40 on wild land, which is an increase of two mills in each case over last year's levy. In 1916 in the conversion of the bonds $716,000 of the bonded debt was dropped. In 1917 the interest on the serial bonds was met and $31,000 of the principal paid off the debt, and when making the arrangements with the bank for the annual loan to carry the municipality for the first six months, the council is making provision for taking care of the 1918 payment on this debt, which will be $32,000. Each year the interest is being reduced, and the principal being paid off is increased. When the June payment is made the debt of the corporation will have been reduced from $3,003,150 in 1916 to $2,224,150. Under the serial bond system adopted in 1916 the debt of the corporation will be reduced this year again by $32,000. Burnaby's debt in 1916 was $3,003,150 under the system of sinking fund debentures. Reeve Fraser and Clerk Moore devised the scheme of converting these bonds into 20-year serial bond debentures, each year paying off a proportion of the bonded indebtedness of the municipality by paying off a part of the principal. In this way the interest for the next year was reduced, and that interest added to the capital paid off the following year.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

Complete Service to Ford Owners Everywhere

COURTEOUS attention to your needs wherever you may travel is something you appreciate, and being a Ford owner you can get it. You are always "among friends."

There are more than 700 Ford Dealer Service Stations throughout Canada. These are always within easy reach of Ford owners—for gasoline, oil, tires, repairs, accessories, expert advice or motor adjustments.

The cost of Ford Service is as remarkably low as the cost of the car itself. Nineteen of the most called for parts cost only $5.40. Just compare this with the cost of spare parts for other cars and you will realize the advantage of owning a Ford.

FIFTY-EIGHTH ANNUAL REPORT

THE LONDON MUTUAL FIRE INSURANCE CO. OF CANADA

DIRECTORS' REPORT

To the Shareholders and Members of the London Mutual Fire Insurance Company of Canada

Your Directors herewith submit the Fifty-eighth Annual Statement and Balance Sheet, duly certified by the Auditor, showing the receipts and expenditures for the year, as well as the Assets and Liabilities of the Company as at December 31st, 1917.

The operations of the Company for the year 1917 resulted in a profit of $40,656.06, after providing for all bad and doubtful debts and outstanding liabilities. Of this amount $15,000 has been set aside as a reserve for possible future losses on investments, and the balance $25,656.06 has been added to the surplus.

The net premium income for the year was $399,923.15, an increase of $36,239.26, while both the loss and expense ratios have been satisfactory.

The reinsurance reserve, full Government Standard, stood at $279,095.52, an increase of $6,763.07; the Cash Surplus $141,559.57, an increase of $25,656.06, and the Capital Stock paid up at $19,250.00, an increase of $1,750.00. The total Cash Security for Policyholders was $502,417.97, an increase of $31,301.14, in addition to which there is the unassessed portion of premium notes, which amounts to $250,999.09, an increase of $3,507.16, making the total Security to Policyholders $753,417.06, an increase of $34,808.30, and a total Surplus to Policyholders of $411,808.66, an increase of $30,913.22.

The retiring Directors are A. H. C. Carson, R. Home Smith, and A. C. McMaster, all of whom are eligible for re-election.

Your Directors desire to thank the Agents of the Company for their support, and they also wish to express their appreciation of the work of the field and office staffs during the past year.

All of which is respectfully submitted.

A. H. C. CARSON,
President.

CERTIFICATE.

We have audited the books of the London Mutual Fire Insurance Company for the year ending December 31st, 1917. We find the books to be in order and all the information asked for has been cheerfully given.

Our examination has included the Cash and Bank Books, Premium Registers, Agents and Branch Balances and the securities held by the Company.

We certify that the above Balance Sheet is in accord with the books and in our opinion is a full and fair statement of the position of the Company on that date.

EDWARDS, MORGAN & COMPANY, Chartered Accounts.

Toronto, February 16th, 1918.

MANITOBA'S COMPENSATION ACT

Principle of the Measure is Sound But Operation is Criticized

The report of a commission of inquiry regarding the operation of the Workmen's Compensation Act of Manitoba, finds that the principle of the Manitoba measure is sound. The commission (consisting of W. S. Fallis, A. R. D. Patterson and A. W. Puttee) strongly criticizes the board's action (since cancelled) in raising premium rates without any hearings or investigation as to inadequacy of old rates, and finds no justification for the move. It further finds a lack of organizing ability on the part of the administration; that the staff was unduly large, that salaries were out of proportion to the work performed and that the assistant commissioner (Wm. Neill) was unnecessary, as the work entrusted to him rightly belonged to the commissioner (Herbert G. Wilson). Other work could have been done by a secretary. The statistician was unnecessary. One inspector only was necessary in place of two, and the full-time employment of a medical officer was not needed.

The space now under lease for offices of the commission is double what is necessary. A great saving could have been effected by renting smaller offices in less valuable property. Portions of the premises leased and under option, but not necessary, should be sublet. Economy was not practised in purchasing the equipment; the quantity and quality of office furniture and other appliances are much in advance of present requirements.

Reserve Fund Advocated.

The commission finds that the income of the board at present is above normal and that a reserve fund should be established out of it to avoid calling on the revenues of the province during periods of industrial depression, when the premium income would be necessarily much lower than it is to-day.

The administration revenue will be seriously impaired by the Dominion government taking over the Canadian Northern Railway, as the estimated premium income from the Canadian Northern Railway is about one-quarter of the whole income of the board.

To check arbitrary action and to check expenditures and adjustments of claims, the commission recommends that the Workmen's Compensation Board should consist of two directors and a commissioner, the two directors to act in an advisory capacity and to pass in meeting on all acts of the commissioner. The commission recommends that remuneration of $1,000 a year be paid to directors.

An estimate of what is considered necessary to efficiently administer the compensation act follows: Two directors, $2,000; one commissioner, $6,000; one secretary, $3,000; one inspector, $2,100; one medical officer, part time, $1,500; accountant, claims clerk and general office staff, $6,640; rent, etc., $4,760; total, $26,000.

This is a reduction on the present estimate, minimum $55,000, maximum $75,000, made up by the present administration. The income receivable for the coming year is considerably larger than would cover the royal commission's estimate and sufficiently large to allow for creation of reserve fund suggested.

The commission recommends that guarantee bonds should be given by the commissioner, secretary and accountant.

Want Higher Compensation.

A delegation of labor men interviewed the members of the Manitoba cabinet recently and made several requests. They asked that the Workmen's Compensation Act be amended so as to make 75 per cent. of the wages of a workman injured the basis of compensation instead of 55 per cent. It was also asked that the compensation payable to the widow and children of an injured man be double of the present rates of $20 a month for the widow and $5 a month for the children; also to provide the sum of $125 for funeral expenses and to provide for the medical and hospital bills to an unlimited amount—a provision that would tend to serious abuses. It was also asked that payment commence immediately upon injury.

PACIFIC GREAT EASTERN PASSES TO GOVERNMENT

The negotiations between the government of British Columbia and the Pacific Great Eastern Railway have been concluded, and the government will take over and finish the line. The company is to pay the government $1,100,000, of which $750,000 will be in cash and the balance due after the war. The government will resume the operation of trains, which was recently suspended by the company, and will construct the line from Clinton to Williams Lake, a distance of 100 miles, during the present year.

The present settlement is the result of long-continued negotiations, and puts an end to the civil suits which the province had taken against the railway. The company retains its land development enterprises.

The payment to the government of the sum of $1,100,000 releases the members of the company of their pledge to finish the line.

The decision was reached in a conference between Hon. John Oliver, provincial minister of railways, and R. C. Crombie, of the railway. No difficulty is expected in securing the necessary legislation, and it is learned that the tentative agreement provides that the company will join the government in applying to Ottawa for validation of charter rights, in regard to which certain doubts were raised by the company in its statement of defence in the suits filed by the government.

The company hands over all its assets except the lands and holdings of the Pacific Great Eastern Development Company. The company is to pay the government $500,000 cash and $250,000 within four months. The remaining amount may be paid at any time up to five years after the end of the war.

REAL ESTATE LOAN COMPANY OF CANADA

Not without special significance was the statement of Dr. M. H. Aikins, president of the Real Estate Loan Company of Canada, at the recent annual meeting, regarding the securities owned by the company. "Our debentures owned," he said, "are all either government or municipal bonds. They are a readily realizable asset, and, having been carefully purchased, bring a remunerative interest yield. We do not touch railway or industrial securities." The company has $95,175 of municipal debentures and Canadian war loans. There is due by bankers the sum of $29,359, in addition to a small amount due by agents and cash on hand. The loans on stock at the end of the year were small, amounting to only $4,689. This class of business is largely used by the company as employment for surplus funds temporarily accumulated. The loans are made only on securities allowed under the Dominion government act.

The statement of assets shows loans on mortgage of $1,206,757. This is made up of 850 first mortgages, or an average of $1,500 each. Dr. Aikins, the president, explained at the annual meeting that the directors' policy of making small loans with maturing principal instalments, is proving a source of strength both to lender and borrower. The valuation placed on these mortgage securities shows a margin in excess of 50 per cent., and they yield a very satisfactory return.

The real estate foreclosed stands in the balance sheet at $89,445. Owing to war conditions and legislation in the West, real estate on hand has been increased. This amount covers income producing properties which are of such a size as should have a wide market on the return of normal business conditions, and in the directors' opinion is amply secured. Meanwhile there is rental surplus above carrying charges.

Dealing with the results of the past year, it is found that after providing for all expenses, interest on money borrowed and dividend at the rate of 7 per cent., there remained a balance at the credit of profit and loss of $22,754. From this the sum of $10,000 was carried to the credit of the company's rest, a similar amount to contingent fund, and the balance, $2,754, was carried forward. The company's debentures were increased during the year.

The annual statement of the Real Estate Loan Company of Canada is very satisfactory, reflecting good management, careful direction, and a strong position. Mr. E. L. Morton has managed the company for many years with conspicuous success. The directors, who are actively interested in the welfare of the corporation, are as follow: M. H. Aikins, M.D., president; E. Douglas Armour, K.C., vice-president; Edmund Wragge, M.I.C.E., William A. Cooke and H. W. Mickle.

MOUNT ROYAL ASSURANCE COMPANY

The Mount Royal Assurance Company, Montreal, reports a net premium revenue of $503,285 for the year 1917, an increase of $3,679 over 1916, and a total net revenue, including interest on investments, etc., of $563,559. The losses paid amounted to $246,374, representing a loss ratio of 48.9 per cent. on the premium income.

The net earnings of the company amounted to $142,634, of which $39,118 was added to the reinsurance reserve fund and $103,515 carried to profit and loss. The company's reinsurance reserve now amounts to $307,998 and the amount at credit of profit and loss is $412,501. The total assets of the company are $1,199,903.

CANADA FOUNDRIES AND FORGINGS

The financial position of the Canada Foundries and Forgings Company shown by the annual statement presented to the shareholders at the annual meeting in Brockville on February 15th, indicates profits for the year amounting to $695,586, compared with $659,852 for 1916; $832,056 in 1915, and $46,231 in 1914. Deductions included bond interest of $10,478, while taxes and expenses amounted to $99,234, a total of $109,712, leaving the net surplus for dividends at $585,874 equal to earnings on the common stock after preferred dividends of 54 per cent. The latter called for a distribution of $67,200 and the common stock payments amounted to $144,000, leaving a surplus balance for the year of $374,674 which, added to the previous balance, made the total profit and loss surplus at the end of 1917 equal to $1,128,282.

BRITISH COLUMBIA PERMANENT LOAN COMPANY

The earnings of the British Columbia Permanent Loan Company, Vancouver, during the past year amounted to $204,957. The interest charges on public liabilities, expenses, etc., amounted to $159,729. To the contingent fund was transferred $10,000 to make provision for losses which may be incurred in connection with loans, and the balance, $35,227, was carried forward unappropriated to 1918. Interest accrued, but not yet received by the company, amounting to $80,310, was not taken into the profit and loss account. The auditors, in their certificate, specially mention this fact. All items of interest considered uncollectable were eliminated altogether.

The directors were successful in making a debenture issue in the United States amounting to $300,000, and with part of the proceeds repaid in full to the Canadian Bankers' Association the balance due on first mortgage bonds. The total expenses attending this issue of debentures were written off the profits of the year.

An analysis of the financial statement shows that the company has maintained its conservative policy and strengthened its financial position. In referring to the fact that the directors again decided to pass the dividend, Dr. D. H. Wilson, president, stated at the annual meeting that it must be remembered that a great portion of the company's working capital had been loaned to the company on sterling debentures held in the Old Country. "The conditions incident to the war," he continued, "make the tenure of these investments very uncertain. The directors deemed it wise and prudent to conserve and mobilize our resources so as to enable us to meet any exigency that may possibly arise during the continuance of the war. In Great Britain, government bonds are yielding to the investor 5⅜ per cent. with a bonus at maturity, which, from a financial standpoint, makes them very attractive. Added to this is the fact that persistent and continuous pressure is being exerted by the treasury department upon the holders of colonial securities to induce them to realize on the latter, with a view to investment in home securities. At the same time, the individual investor, from patriotic motives, is disposed to do the same thing. While this is all commendable from a patriotic standpoint, it imposes on the directorates of all Canadian loan companies drawing capital from this source the necessity of being extremely conservative, or, in the language of the day, of standing, financially speaking, on a war footing."

The company's general manager is Mr. T. D. MacDonald, and the directors are as follow: David H. Wilson, Esq., M.D., Vancouver, president, Pacific Coast Fire Insurance Company; Wm. H. Malkin, Esq., Vancouver, president, W. H. Malkin Company, Limited, director Union Bank of Canada; C. Spencer, Esq., Vancouver and Victoria, director David Spencer, Limited; George Martin, Esq., Vancouver, Martin and Shannon, brokers; A. H. Douglas, Esq., Vancouver, barrister; R. J. Robertson, Esq., Victoria; Robert Gelletly, Esq., Vancouver, Colquhoun and Gelletly, brokers.

SOCKEYE SALMON IN BRITISH COLUMBIA

Editor, *The Monetary Times:*

Sir,—I would like you to lay before the public, through your paper, a few facts regarding the sockeye salmon question on the Fraser River. Various gentlemen have given their opinions on this subject through the press. I shall deal with this question from points of facts in order that the truth may be freely grasped by each reader. There is no doubt but what the sockeyes are being diminished, and there is no doubt that there is some reason for this condition. Let us carefully find out the cause.

My first point will be concerning fishing with seines in the Puget Sound. To make this point still clearer, a seine is only a fish exterminator and should be strictly forbidden. But we must not lose sight of the fact that a seine can be used on the high seas or outside of the three-mile limit, where the government has no jurisdiction. Now, the cannerymen on the Fraser River want a closed season for four years in order to replenish the fish. Such a suggestion is folly. I notice that one gentleman states through the press that "it is quite possible to have too many sockeyes get to the spawning-beds." This statement is also incorrect. Now, I must point out to the public that seines and hatcheries should have never been allowed. Let us carefully consider the hatchery question. The average hatchery report for ten years of young salmon liberated has been 77,597,850 fish per year. Now, if that number of salmon had returned and hatched ten fish to one (which is a very small average), you would have had 775,978,500 fish. If these fish had come back four years later and increased accordingly ten times, we would have had 7,759,785,000 fish. Instead of that we have only a few thousands.

Now, the public will ask, Why are the hatcheries a failure? Well, the hatcheries produce nothing but tame fish, without any natural instinct whatever (which has been proven by the writer), and, therefore, become a prey for trout, squaw fish and other small species of fish which inhabit the Fraser River by the millions. Where the hatcheries hatch one fish, I may truthfully say ten are destroyed.

Now, my next point is, if the Fraser River is closed—we will say for ten years—can we expect the river to be replenished? In the first place, it has taken hundreds of thousands of years for this fish to accumulate in the Fraser River, and such fish as trout, squaw fish, suckers, etc., have multiplied accordingly with the sockeyes. The above-mentioned fish have been eating the eggs of the sockeyes in order to counterbalance the over-production of sockeyes. Now, the sockeyes have been caught out, whereas the other mentioned fish have not been caught out, and they are to-day eating the eggs of the sockeyes and other salmon just as fast as the sockeyes and other salmon can lay them.

Therefore, if we want our salmon replenished, we must do away, first, with the hatcheries; secondly, with the seines; and thirdly, with the fish that destroy the salmon eggs, such as trout, squaw fish, suckers and other small fish, which are at present protected; if not, they are bound to exterminate the sockeyes and other salmon. If these natural destroyers are not destroyed, there is only one thing to do, and that is, let the fishermen fish it out, and I cannot see anything better than to fish it out, on the ground that the fish on the high seas cannot be protected.

We should carefully deal with another point, and that is, we should have men of practical experience in the positions, whose business it is to advise the minister of fisheries. These men should have a thorough experience along fishery lines, as the fishery industry is one of our best assets. Surely, experienced men are needed, as inexperienced men cannot figure out what is needed to run the fishery industry. It must be proved by practical, experienced men in order that it may be a benefit to the public, as we can ill afford to lose such a grand asset.

J. A. Kendall.

WOULD RE-ASSESS VICTORIA'S LANDS

Appointment of Commission Would Place New Value on Property—Committee Submits Report

In submitting the report of Victoria's tax situation to the streets committee, the joint committee of the city council, said that in view of the substantial relief which it is suggested should be given to those who owe taxes which accrued previous to 1918, the committee recommends that a tax sale should be held as soon as practicable after June 30th next of all property the taxes on which are unpaid for the years 1913 and 1914. The city council, however, does not approve of this and there will be further discussion on that matter later.

"In considering the important matter referred to," said the committee, "your committee has had its attention called to the serious condition arising from the fact that almost the entire revenue of the city has to be obtained from land, much of which is, at present, bringing in no income whatever, even though improved. In 1917 nearly 95 per cent. of the revenue of the city was obtained from land, not including the revenue from the waterworks and $75,000 received from the provincial government for school purposes. In the opinion of your committee a greater burden is now laid on land in the city of Victoria than it can bear with safety and your committee considers it is imperative that strong representations should be made to the provincial government urging the transfer to the municipalities of at least some of the taxes now retained by the province, especially those which arise through the activities of the municipalities and generally involving expenditures by the municipalities for administration, etc., such as the following:—

"Income tax, amusement tax, motor licence fee, insurance companies' tax, registration fees covering property within the municipalities.

"In Ontario the income tax is a municipal tax which materially relieves the municipality in respect to the revenue to be obtained from land. From time to time additional obligations are placed on municipalities, such as those arising from the prohibition act, in which case it may be noted the revenue from licences is no longer received. It is not denied that the province requires revenue, but this will be dearly secured if in the process the financial future of the municipalities of the province is to be imperiled. Meanwhile, the province, in addition to the taxes mentioned above, has important sources of revenue in the forests, mines, fisheries, lands in unorganized districts, fees on the incorporation of companies, etc.

"Your committee begs to make the following recommendations, which it believes, if adopted in their entirety, will go a long way toward solving our present difficulties:—

Appointment of Two Commissions.

"1. One, or at the discretion of the corporation, two commissions, shall be appointed by the corporation for the following purpose:—

"(a) To revalue for the purpose of the assessment roll all property within the city subject to municipal taxation in accordance with the provisions of this act.

"(b) To decide what portion of the cost of expropriations should be assessed against the property owners directly affected in accordance with this act.

"(c) To draw up a fair and equitable settlement binding on all parties in respect to local improvement undertakings for which no by-laws have yet been passed owing to disputes between the corporation and the owners affected.

"(d) To consider and to decide what reduction, if any, should be made in the assessment for work done under a local improvement by-law, which may be referred to the commission by the corporation for this purpose.

"2. No member of said commission or commissions shall be any person who is or who has been either mayor or alderman of the corporation; nor personally delinquent.

"3. The expense of the commission or commissions shall be paid by the corporation and such fees shall be paid to the commissioners as shall be agreed between them and the corporation.

"4. The commission or commissions shall each consist of three members and the decision of a majority of the commission shall be final.

"5. The commission appointed for that purpose in accordance with this act shall proceed to value all the land within the city subject to municipal taxation, providing, however, that the basis of the valuation of all the land shall be such that the aggregate valuations of all the land within the city subject to municipal taxation shall not be more than $55,000,000 nor less than $45,000,000. The valuation made by the commission shall form the assessment roll for the years 1918 and 1919 so far as land is concerned, and at their discretion the council may adopt the said roll for the year 1920.

"6. The commission shall consider assessments made to cover cost of expropriations and it shall have power to reduce these assessments and in deciding whether the assessment should be reduced or not the commission shall take into consideration all the circumstances bearing on the case.

"7. Where in any case it seems to the commission more equitable, the commission shall have power to assess the cost of the improvement on a frontage basis.

"8. If any of the assessments, or any portion thereof, already made in respect to local improvements by-laws, or any of them, are referred to the commission by the corporation for consideration by the commission, of the charges made for work done in carrying out the by-law, the commission may reduce the assessment for such work, taking into consideration the benefits derived from the improvement by the properties assessed and the fair and reasonable charge for the work and other expenses incurred in connection with the work.

"9. The commission shall have power to reduce the assessment on one or more lots without altering the assessment as it affects other properties included in the by-law.

"10. The interest and sinking fund charges in respect to any reductions made in assessments shall be paid out of the general revenue of the corporation.

"11. Upon application by the corporation, the commission shall settle the terms of a fair and equitable settlement binding on all parties in respect to work of local improvement, in respect to which assessment by-laws have not yet been passed because of disputes between the corporation and the owners of properties affected.

Arrears of Municipal Taxes.

"12. That on or before June 30th, 1918, one-tenth of the aggregate amount of all the said taxes, with interest, due on December 21st, 1917, less one-tenth of the taxes originally levied, with interest thereon to December 31st, 1917, other than taxes for local improvement, shall be paid in cash to the corporation with interest thereon at the rate of 7 per cent. per annum from January 1st, 1918, to June 30th, 1918.

"13. Providing, further, that on or before June 30th in each and every following year there shall be paid one-tenth of the aggregate taxes and interest due on December 31st, 1917, less one-tenth of the taxes originally levied, with interest thereon to December 31st, 1917, other than taxes for local improvement, with interest at the rate of 7 per cent. per annum from June 30th in one year to June 30th in the following year, on the amount of the principal then unpaid, together with the previous year's taxes.

"14. Providing, further, that if in any year, or previously, to apply to that year, there shall not have been paid previous to June 30th one-tenth of the principal sum and interest as aforesaid, the said property shall forthwith be subject to sale by the corporation on and after September 30th of that year, such sale to include the current year's taxes whether due or not.

"15. Providing, further, that any time previous to the sale of the properties the instalments on which are in default the owner may pay the instalment or instalments in default with the addition of 10 per cent. of the amount if the instalments in default and any expense incurred by the corporation to the date of the payment of the instalment or instalments in default, and thereupon he shall be in the same position as if the instalments had been paid when due.

The Purchaser's Benefits.

"16. The purchaser at a tax sale on paying the instalments in default shall be entitled to the benefits of the preceding provisions subject to the right of the owner to redeem within one year from the date of the tax sale.

"17. Provided, further, that if in respect to any property the taxes on which were unpaid on December 31st, 1917, payment of the taxes is made in full not later than June 30th, 1918, the following deductions shall be made in consideration of such payment in full of all taxes unpaid: There shall be deducted from the total amount of taxes and interest thereon due on December 31st, 1917, one-half of the amount so charged for interest and one-tenth of the taxes originally

levied other than local improvement taxes, and no interest shall be charged from January 1st to June 30th, 1918.

"18. Provided, further, that if after June 30th, 1918, and before January, 1923, payment is made on the unpaid portion of the taxes due December 31st, 1917, with interest thereon to date of payment, less the deductions set forth in clause 17 of this report, then there shall be deducted 5 per cent. from the amount of such unpaid portion of the taxes so reduced, due on December 31st, 1917, but no deduction shall be made from the amount due for interest since January 1st, 1917.

"19. In the case of persons protected by the war relief act, like relief shall be given, to date six months after the termination of the war.

Credits Allowed Taxpayers.

"20. If the amount assessed against any property for local improvements, either for work done or for the cost of expropriations, is reduced by the commission, any person who has paid the whole or any portion of the local improvement tax levied on the basis of the original assessment shall receive a voucher representing the excess of the payments over the amount payable on the basis of the reduced assessment, and this excess voucher shall thereupon be applied in payment of any further amounts due by him in respect to the assessment which has been reduced, or if there are no further payments due by him in respect to the assessment which has been reduced, then it may be used in payment of taxes, including the current year's taxes, due by him on other property within the city of Victoria subject to municipal taxation, or if he has no other such property then the voucher may be transferred to another person who may use it in payment of taxes due by him to the city."

COAL IN DUFFERIN COUNTY?

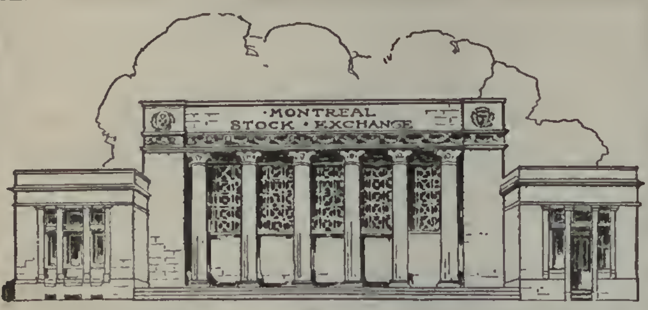
Editor, *The Monetary Times*:

Sir,—Some years ago I noticed an article in *The Monetary Times* to the effect that there was coal in the township of Mulmur, in the county of Dufferin. Has the matter been attended to and investigated? And if not, why not?

The fuel question is very serious for Ontario, as you, no doubt, are aware. We will, I believe, pull through this winter, but what about next? It is useless to talk about using hardwood, as has been suggested by some writers in the newspapers, because there is very little hardwood in this part of Ontario for use by anyone without stripping the country of all trees, and it is no use relying on the United States much longer, because they will have enough to do to look after themselves. Something will have to be done before next winter, and done quickly. Why not exploit the township of Mulmur and get the coal out if there is any?

Yours, etc.,
E. J. Beaumont.

Kitchener, Ont.,
February 25th, 1918.



MONTREAL STOCK EXCHANGE

VICTORY BONDS

"The National Investment"

VICTORY Bonds have so many attractive features they may properly be called the National Investment.

The assets behind Victory Bonds comprise every inch of territory, every farm and forest, every lake, railway, factory; in fact EVERYTHING in Canada is pledged for the payment of interest and principal of Victory Bonds.

Victory Bonds are issued in denominations of $50, $100, $500, and $1,000, which places them within the reach of everybody. There are three issues to choose from, maturing in 5, 10, and 20 years respectively. The investment will yield you 5¾%. Interest is paid you twice yearly, on June 1st and December 1st. They can readily be turned into cash should the necessity arise.

Unquestionably Victory Bonds are the best investment for everybody. Their value will increase considerably at the first definite signs of peace.

If there is any information you would like to have about Victory Bonds or any other security, write to-day to the Secretary of the Montreal Stock Exchange.

A valuable booklet has been prepared on "Investing." The edition is limited. Write to-day for your copy.

Address the Secretary Room 433, Stock Exchange Building, Montreal.

Toronto, 27th February, 1918.

VANCOUVER LIFE UNDERWRITERS MEET

The annual general meeting of the Vancouver Life Underwriters' Association was attended by the managers of the various companies doing business in British Columbia and by a number of field men. President J. H. Campbell, provincial manager of the Equitable Life Assurance Society, was chairman.

Tentative plans were outlined for the holding of periodical luncheons to be called at stated periods. At these luncheons the life insurance men will seek to have address them important men in the various walks of life, who will point out life insurance as it appeals to the various speakers.

The following officers were elected for the ensuing year: Mr. F. W. Marsh, provincial manager of the Canada Life, president; Mr. J. T. Fahay, provincial manager Metropolitan Life, vice-president; Mr. F. W. Renworth, provincial manager of the Manufacturers Life, secretary-treasurer. The executive committee elected were as follows: Mr. J. A. Birmingham, of the Mutual Life of Canada; Mr. J. H. Poff, provincial manager of the Sun Life; and Mr. C. A. Crysdale, provincial manager of the Monarch Life.

* * *

The new certificates of the St. Lawrence Flour Mills Company, which have been delayed for some considerable time by the engravers, are being issued to shareholders of the company, and it is expected that they will be listed on the Montreal Exchange towards the end of the week.

In 1917, for the first time, the total value of farm livestock in Canada exceeded one billion dollars. This is shown in the annual estimate by the Census and Statistics Office of farm values as compiled from reports received at the end of January, 1918. The estimate puts the farm values at a grand total of $1,102,261,000.

ELECTRICITY WILL NOT REPLACE COAL

Interesting Explanation of a Statement Which Has Caused Considerable Comment

On various occasions Mr. Arthur V. White has drawn public attention to the fact that the amount of heat in electrical energy does not afford an adequate substitute for coal in providing heat for the citizens of Canada.

In his article in *The Monetary Times Annual* of January 4th, Mr. White stated: "Let it be appreciated that Canadians need never expect to have electrical energy replace coal and other fuel for heating purposes except to a relatively limited extent." This statement has caused considerable comment.

Recently, when addressing the important fuel conference held by municipalities in Galt on February 11th, Mr. White again emphasized his contention that, as a general proposition, electrical energy is most serviceably employed for strictly power purposes, while fuel, such as coal, oil, etc., is more profitably employed for heating. The underlying principles involved are so simple that they should be well understood and their force appreciated by all interested in the fuel problem. The following statement contributed by Mr. White will assist to make this subject clear:—

Editor, *The Monetary Times.*

Sir,—Respecting my statement—"Let it be appreciated that Canadians need never expect to have electrical energy replace coal and other fuel for heating purposes except to a relatively limited extent"; would briefly remark as follows:—

Mechanical Equivalent of Heat

In order to determine what is technically termed the *mechanical equivalent of heat,* J. P. Joule, an Englishman, about 1850,—and subsequently a number of other experimenters,—ascertained the number of foot pounds of energy required to raise one pound of water one degree Fahrenheit. In their simplest form, the experiments consist of confining a known quantity of water in an insulated vessel and transmitting to the water by means of agitated vanes—like a churn—the energy developed by a known weight falling through a given distance. Taking into consideration the results of various experiments, this equivalent may be taken at 778 foot pounds. It may be stated, for example, that 778 pounds falling through one foot will develop energy sufficient to raise one pound of water one degree Fahrenheit. This heat unit is termed a *British thermal unit,* or B.t.u.

Now, by definition, a horsepower is 33,000 foot pounds per minute or 33,000 x 60 foot pounds per hour. If, therefore, we divide 33,000 x 60 by 778, we obtain 2545 as the heat units derivable from one horsepower-hour of energy. Correspondingly, the heat units derivable from one kilowatt-hour are 3412.

It makes no difference, of course, what prime agency has resulted in the development of the power. Consequently, it may be stated that a horsepower-hour of electrical energy can only yield approximately 2545 heat units.

Coal and Heat Units

Considering next coal, it may be stated that a fairly good grade of bituminous coal will average 13,500 heat units per pound. The amount of coal required to produce by means of steam plant, one horsepower-hour, varies greatly, depending upon the size of the plant, as well as the character and general efficiency of the whole power-house equipment. Central station, steam-electric, generating plants which operate during the twenty-four hours, obtain a greater efficiency from their fuel than do the individual plants ordinarily used in manufacturing establishments.

Considering central station plants, the coal consumption ranges all the way from about 1½ to 2 lbs. per horsepower-hour for large installations of from 100,000 to 200,000 horsepower, up to 5 or 6 lbs. per horsepower-hour for plants ranging in size, say, from 50 to 1,000 horsepower.

If, by way of illustration, we assume 4 pounds of coal per horsepower-hour, we then have 4 x 13,500 = 54,000 heat units in 4 pounds of coal. Now, in the form of power this would only yield 2545 heat units per horsepower-hour. So we have an efficiency of 2545 ÷ 54,000, or less than 5 per cent. If we assume 2 lbs. of coal per horsepower-hour, we have less than 10 per cent. efficiency.

The significance of the above facts must be evident. Thus, for example, if the 4½ million tons of anthracite coal imported yearly from the United States into Canada, were used for the development of electrical energy, and this energy were then converted into heat—recoverable even on the basis of 100 per cent. efficiency—the resulting heat would, under the more favorable conditions above indicated, be only an amount corresponding to the heat units in about half a million tons of coal. That is, ninety per cent. of the heat in the original amount of coal would be lost. Based upon reasonable assumptions, Canada's share of Niagara power, if all possible were developed, would not provide for the fuel needs of the city of Toronto. If it is to be used wholesale, then electrical energy is more efficiently employed for power than for heating purposes.

Yours, etc.,

ARTHUR V. WHITE.

Toronto, February 26th, 1918.

CANADA NATIONAL FIRE INSURANCE COMPANY

While the fire losses on this continent last year, exclusive of the Halifax disaster, were more than in 1916, the fire loss ratio of the Canada National Fire Insurance Company was only 46.65 per cent., as compared with 67.18 per cent. in the previous year. This improvement reflects credit upon the company's underwriting department, which is, the directors report, taking special precautions to counteract the relation of war conditions to the number of fires. The company commenced business seven years ago, and, therefore, had comparatively little time to become well established before the war started. The decline in building operations, following the general business and financial depression, adversely affected the volume of fire insurance generally. New buildings are an important source of business for fire insurance companies. Despite these facts, the Canada National has written a substantial volume of business during the past few years. The business during 1917 was $20,002,346. The premiums on the gross insurance in that year amounted to $240,824, while reinsurance premiums were $82,884. The gross amount of insurance in force on December 31st, 1917, was $31,076,730, the premiums thereon amounting to $431,604. The total amount of reinsurance in force at the same date was $8,384,803, on which the premiums amounted to $108,204. The net amount of insurance in force at the close of the year was $22,691,927, on which the premiums amounted to $323,400.

Commenting upon the company's investments, Mr. J. H. G. Russell, the president, pointed out at the annual meeting that they consist very largely of first mortgages on improved real estate, this item amounting to $1,625,236, an increase of $180,872 over the previous year. Considering the abnormal times due to the war and other causes, the payments of interest and principal have been reasonably well met. With the margin of security with respect to the company's mortgage loans, it is not anticipated by the directors that the company will sustain any loss, either on our loans or on properties foreclosed.

In the matter of stocks, bonds and debentures, these amounted to $164,906, including $76,000 paid on account of Dominion government war bonds. "These investments," says the directors' report, "are of a high order and yield a satisfactory rate of interest." There is a considerable decrease in this item as compared with $433,000 a year ago. If this decrease represents in part the abolition of the interlocking of interests with other companies, and the addition of Dominion war loans instead, it would naturally mean that a considerable strengthening of the company's position had occurred.

With the view of providing for any contingencies arising from possible depreciation in mortgages, stocks and other securities of the company, the directors deemed it advisable, and in the best interests of the company, to create a contingent reserve fund, and have accordingly set aside to this fund the sum of $75,000. This is a commendable policy. During the year the company adhered to its policy of maintaining large cash reserves, the amount in banks and on hand at the end of the year being $223,487. Judging by the financial statement, the company is in a sound position and is making satisfactory progress.

The average value of farm land for the whole of Canada, including land improved and unimproved, together with dwelling-houses, barns, stables, and other farm buildings, is approximately $44 per acre, as compared with $41 in 1916.

Total Expenses of Management (including Agents' Commissions)	17,251.82

DIRECTORS' REPORT

The Directors have pleasure in submitting their report for the year ending December 1st, 1917.

New Business.—Applications received amounted to $578,800, of which $506,100 was issued. The total business in force at the end of the year amounted to $535,350.

Assets.—The assets of the Company show an increase of $36,747.02 and now amount to $78,542.15, an increase of 90%. These figures do not include a net total of $56,817.80 stock notes and balances due and accruing from shareholders.

Liabilities.—Special attention is drawn to the fact that our Paid-Up Capital has been included in the statement of liabilities. This is not always done, hence our reason for mentioning it. The amount set aside to cover reserve liability, to which reference is made hereunder, should also be noted.

Investments.—The Company's investments now amount to $54,094.73—an increase of $21,147.61. These investments are limited to the very safest classes of securities, such as Dominion of Canada War Loan Bonds, Municipal, School and Telephone Debentures, and First Mortgages on improved farm lands. The investments in mortgages do not exceed 30% of a conservative valuaton of the lands. These investments yield an average interest income of 5.78 per. cent.

Income.—The Life Assurance Premiums amounted to $30,282.04, Interest on Investments, $3,319.34, and Payments on Stock, $19,573.85 net.

Expenses.—*The total expenses of management (including commissions to Agents) amounted to only $17,251.82.*

Mortality.—No claims have as yet been made upon the Company for the payment of death losses, which the Directors consider a remarkable feature of this year's report, showing the caution exercised in the selection of risks by our Agents, Medical Examiners, Medical Board and Officers.

Reserves.—The reserves provided for the protection of policyholders are in excess of the Om. (5) Table of Mortality and an assumed interest rate of 3%. THIS IS THE HIGHEST RESERVE BASIS YET REACHED BY ANY CANADIAN LIFE COMPANY. These reserves now amount to $23,935.13, representing a sum very much greater than required under the Dominion Insurance Act.

Audit.—A continuous audit of the Company's books has been made by W. G. Sanburn, C.A.

Directors.—All your Directors are serving without remuneration, and will continue to do so until the Company pays its first dividend. The Directors retire annually and are eligible for re-election.

Representatives and Employees.—The Directors desire to express their recognition of the efficient manner in which the representatives and employees have taken care of their various duties.

(Signed) W. R. MILTON, President.

(Signed) H. R. S. McCABE, Managing Director.

(Signed) F. O. MABER, Secretary.

OTTAWA LIGHT, HEAT AND POWER COMPANY

The extra cost of coal to the Ottawa Light, Heat and Power Company last year for generating purposes was over $70,000. This was one item in expenses, management, operation and maintenance, together with bond and bank interest, amounting to $711,159. The expenses increased $108,829 during the year, coal accounting for considerably more than half that amount. Despite this fact, the company's revenues from all sources were $957,300, a substantial increase of $123,108 over the previous year. This satisfactory result, in face of many obstacles, is due to the good work of the management and operating departments and to the active interest of the directors in the company's progress. The Ottawa Light, Heat and Power Company is giving a good service to the public and is operated efficiently as a public utility corporation.

After deducting from the gross revenue the gross expenditure, which includes bond and bank interest, the net surplus for the year is $246,140. The sum of $109,563 has been expended upon capital account. The balance at the credit of profit and loss account, with the addition of this year's surplus, is $305,018. From this, four quarterly dividends at the rate of 6 per cent. per annum have been paid, amounting, in all, to $209,945. After making provision for bad and doubtful debts, there remains $85,499 at the credit of profit and loss account and $720,000 at the credit of reserve account.

The directors' report points out that the Ottawa Electric Company has overcome the reduction in rates which was brought into effect early in 1916, and has further overcome the loss in revenue due to the changing of flat rate commercial accounts to the meter system.

The Ottawa Gas Company, early in the summer of 1917, was face to face with the abnormal rise in the cost of coal. To meet this it was necessary to increase the price of gas from $1.10 gross to $1.25, with the usual 10 per cent. discount for prompt payment. While this increase in rate may not be sufficient to cover fully the higher cost of production, the company has, due to new business and an increased consumption on the part of customers, been able to show substantial increases in gross and net revenue.

The directorate, headed by Mr. T. Ahearn as president, is as follows: Hon. E. H. Bronson, vice-president; Messrs. James Manuel, Warren U. Soper, A. A. Dion, C. J. McCuaig, D. R. Street and F. W. Fee. Mr. D. R. Street is secretary-treasurer.

Mr. J. A. Wilson, one of the best-known life underwriters in the west, who for some years has been with the Canada Life Assurance Company as manager of the Brandon branch, has been appointed city manager in Winnipeg of the Manufacturers Life Assurance Company. Mr. Wilson last year was president of the Brandon Life Underwriters Association, which won the handsome Totum Pole at the Life Underwriters' Association Convention in Winnipeg for the largest increase in membership during the year.

WAR TRADES BOARD ACTIVITIES

Organization Being Completed—Work of Many Departments Now Under One Authority

Members of the recently appointed War Trades Board of Canada are completing their organization for carrying on the work assigned to them and are taking over duties which have hitherto been performed through departments of the government. Already private telegraph wire connection has been provided between the offices of the board in the Bank Street Chambers in Ottawa and the headquarters of the Canadian War Mission in Washington. This will be employed to facilitate the handling of applications of Canadian industries for materials which can be imported from the United States to Canada only under licenses from the government of the former country. Such applications have in the past been taken up by the department of trade and commerce with the United States Priority Committee and Federal Trade Commission. They will henceforth be received by the Canadian War Trade Board, which will carry on the negotiations for the necessary licenses through the Canadian War Mission in the United States.

One Authority Now.

The appointment of the board will bring under one authority powers which have been exercised by several departments of the government. In addition to dealing with applications for licenses from the United States government permitting the bringing of shipments of raw materials to Canada, the board will have direction of the issue of licenses to export goods from Canada. It will thus have a general oversight over both importation and exportation.

Board Has Many Duties.

The board is already taking steps to secure information which it will require in the exercise of its duty to undertake such supervision as may be necessary of industrial and commercial enterprises. It is called upon to keep record of the country's stock of raw materials, partially finished products and finished products, and is required to direct priority in the distribution of raw material, partially finished products, fuel and electric power, and it is called upon to recommend measures for the maintenance of the more essential as distinguished from the less essential industries. The board will make a classification of industries based upon the use to which the output of those industries is to be put. For instance, it would likely place munition manufacturing plants and shipyards in the first class.

Four members of the board, Messrs. Frank P. Jones, the vice-chairman, and John W. McConnell, of Montreal, and James H. Gundy and Charles B. McNaught, of Toronto, will give their whole attention to the work of that body.

Ald. J. J. Gibbons, of Toronto, the representative of organized labor, will give as much as possible of his time to the board and so, likewise, will C. A. Magrath, the fuel controller, and Hon. H. Laporte, chairman of the War Purchasing Commission. W. S. Hodgens, of Toronto, has been appointed secretary.

The Brompton Paper Company's production for the three months ended January 31 is: News mill, 3,722 tons; kraft mill, 1,243 tons; board mill, 1,778; sulphite, 5,750; ground wood, 10,788; and saw mill, 668,790 feet.

TRADE AFTER THE WAR

The following statement relative to foreign trade organization by industries after the close of the war was embodied in a communication to the United States Bureau of Foreign and Domestic Commerce from the secretary of commerce:—

"It seems that there are two abnormal stages through which we must go before what we may call the normal ebb and flow of international trade will, after the war, resume its movement.

"First, the current condition is deliberately abnormal. All the great exporting nations are directly interfering with the progress of their export and import trade and treating it as a war measure on a strictly and avowedly different basis from that of peace.

"Second, another abnormal state must follow immediately after the war, which may be described as like the process of settlement to rest of particles suspended in a fluid in order that the fluid may become clear. In other words, there will be a long period of international industrial reconstructions.

"It will take the form at the beginning of excessive demands for raw materials of many kinds, and probably for finished lumber and machinery and certain kinds of equipment. The whole object during this time will be restoration toward a normal economic manufacturing and productive basis. This period must be gone through fully before the third period, which I speak of as the normal condition, shall arise."

CAPABLE OFFICE ASSISTANT DESIRES POSITION.—An office assistant, lady, desires position in Toronto. Experienced; is careful and accurate; a good writer; can be trusted with confidential or secretarial work, and can furnish first-class references. Box 147, care of *The Monetary Times*, Toronto.

OFFICE MANAGER, wide experience accounting and correspondence, formerly employed in executive capacities by manufacturing and wholesale corporations. Capable of training and disciplining staff. Accustomed to preparing analytical statements and operating cost systems. Thoroughly posted in improved office methods and equipment. Present engagement will shortly be terminated by necessity of closing branch to reduce expenses until after war. Age 38; married. References as to character and qualifications upon request. Address, Box 153, *The Monetary Times*, Toronto.

At the closing meeting of the convention of the Mutual Fire Underwriters' Association of Ontario, held at Toronto this week, the election of officers resulted in the following selections: President, Mr. James Ross, Waterford; vice-president, Mr. W. A. Galbraith, Dutton; 2nd vice-president, Mr. George V. Webster, St. Mary's; secretary-treasurer, Mr. J. J. Stewart; executive, J. C. Dance, Kingsmill; Wm. Purvis, Columbus; Thomas Harkness, Owen Sound; George L. Millar, Jarvis; James Carl; auditors, R. W. Brink, Woodstock; and A. P. McDougall, Melbourne.

CANADA'S SHIPBUILDING ACTIVITIES

Contracts Placed Since March, 1917, Represent a Tonnage of 339,300, Worth $64,500,000

Shipbuilding contracts placed in Canada by the Imperial Munitions Board since March 1st, 1917, constitute the biggest year in shipbuilding this country has ever seen. Contracts have been let in the last twelve months for 46 wooden ships with a total tonnage of 128,000, representing $24,500,000, and for 43 steel ships, totalling 211,300 tons, worth $40,000,000, or a total value of $64,500,000. Four steel ships aggregating 13,900 tons, the individual boats having a tonnage of 4,200, 3,400, 4,500 and 1,800, have been completed. Four wooden ships have already been launched and several others are ready to take the water. New yards were opened during the year at Welland, Vancouver, and Toronto. All yards for the construction of wooden ships are new or have been added to.

The value of the contracts let in the different provinces is as follows:—Nova Scotia, $1,340,000; New Brunswick, $1,000,000; Quebec, $11,600,000; Ontario, $19,240,000; British Columbia, $31,434,000.

Contracts in Provinces.

In British Columbia nine steel ships, each of 8,800 tons, worth $14,750,000; two of 4,600 tons, worth $1,679,000, and one of 4,500 tons, worth $905,651, or a total of $17,334,651, have been contracted for, along with 27 wooden ships, worth $14,100,000.

In Ontario 25 steel ships were contracted for. These comprise 13 of 3,500 tons, nine of 3,400 tons, one of 4,300 tons, and two of 2,900 tons, a total tonnage of 86,200 tons, representing $17,240,000. In addition to this four wooden ships, totalling 11,200 tons, worth $2,000,000, have been contracted for.

In Quebec four steel ships of 7,000 tons each, valued at $5,600,000, and twelve wooden ships of 2,800 tons worth $6,000,000, representing a total value of $11,600,000, have been contracted for.

In New Brunswick two wooden ships, each of 2,800 tons, worth $1,000,000, are contracted for.

In Nova Scotia two steel ships of 1,800 and 2,400 tons, worth $840,000, and one wooden ship at $500,000, are contracted for.

In 1918 Tonnage Will be 400,000.

According to a report of the Imperial Munitions Board it is reasonable to suppose that the approximate total tonnage for 1918 will be about 400,000. The approximate tonnage of wooden vessels being built by the Imperial Board on the two coasts, the Great Lakes and the St. Lawrence River is about 146,000. Figures as to the exact number of men employed in this programme are not available, but assuming an average labor cost per ton it is stated it will not be far from the equivalent of 25,000 men continuously employed.

In view of the foregoing, the figures with respect to the tonnage constructed in Canada in past years is of interest. For instance, 190,756 tons were constructed in 1874 when wooden ship construction was at its height, and each year since then has shown less activity until the war years. In 1880 the tonnage constructed was 65,441; in 1885, 41,179; in 1890, 52,378; in 1895, 16,270; in 1900, 22,326; in 1905, 19,781; in 1910, 22,283, and in 1914, 43,346.

For Imperial Munitions Board.

At present practically every shipbuilding plant in Canada that is equipped for building steel ships is making ships for the Imperial Munitions Board. Just as soon as each berth becomes vacant it is being taken up by the Dominion government in connection with the large shipbuilding programme announced by Hon. C. C. Ballantyne, minister of marine and fisheries, early in the year. Following are the details of conditions in the different shipbuilding plants of Canada:—

Two berths are vacant at Canadian Vickers, Limited, Montreal, with whom the government has entered into contract to fill the berths at once. Arrangements have also been made to fill berths becoming vacant in May, August and September with 8,200-ton ships.

Arrangements have been made with the Collingwood Shipbuilding Company to fill one berth now vacant with a 3,800-ton ship as rapidly as men can be found. It is also expected two 3,000-ton ships will be started, one in April and one in May.

The Wallace Ship Yard, Vancouver, will commence building a 4,350-ton ship early in May. They also propose building a 5,000-ton standard ship at an early date.

The government has made arrangements with the Port Arthur Shipbuilding Company to fill two berths vacant before July with two 3,000-ton ships, canal size boats.

The Polson Iron Works, Toronto, will fill four berths vacant in October with four 3,000-ton ships.

Get Steel from United States.

The Canadian Allis-Chalmers, Toronto, say they can build six ships before June, 1919, and will start as soon as berths become vacant.

Messrs. Coughlan & Sons, Vancouver, find it impossible to commence further work this year. They are building ships for the Imperial Munitions Board.

The Davie Shipbuilding Company, Quebec, will fill a berth as soon as vacant with a 5,000-ton ship.

In the meantime the department of marine and fisheries has made arrangements with the United States to secure the necessary steel to take care of shipbuilding, and at the same price as the plants across the border are paying. This steel is to be delivered to the various factories as required up to June, 1919.

It is pointed out that the establishment of new yards would only draw off men from the other yards because there are only a certain number of men available for this work. Therefore, the more the men were spread the fewer ships would be got into the water. Under existing conditions it is more important to get a few ships into service than have a large number under construction and none available.

NEW SASKATCHEWAN TRUST COMPANIES ACT

In introducing the second reading of the Trust Companies Act of Saskatchewan at the recent session, Hon. Mr. Turgeon stated that the old procedure in the matter of trust companies was by way of a private bill to a committee and thence to the assembly. The interest of the legislature was to see that these corporations were placed on such a footing that they would be subject to such requirements as would be a protection in every sense of the word. The question became so acute that a few sessions ago the government was asked to introduce general regulations in the matter. The new act is designed to meet those wishes. Companies, however, will not be able to secure incorporation merely by applying to the department, but will, as before, have to come to the legislature with a private bill, which is a model bill included in the act. Each and every company will have to conform to the general provisions of the act.

The act prescribes in a very definite manner, and much more comprehensively than in the old act respecting trust companies, the constitution, management and powers of trust companies. Every detail of incorporation and organization is provided for, as well as internal regulations, by-laws, capital stock and calls thereon, preferred stock, and how to increase the capital stock. A lengthy section prescribes the method of issuing share warrants; the books to be kept by a company are defined; the procedure regarding meetings and voting is laid down; provisions for auditing and the powers of the auidtor are included; the powers of a trust company and the investments it may make, the borrowing powers and limitations thereof, and several other similar matters are all carefully stated. All of these provisions are designed so as to insure full protection to the public and at the same time to afford to the trust companies ample power to handle to the best advantage all estates committed to their care for administration.

One section in particular may be mentioned, as a certain part of it was the occasion for some debate and received very careful consideration by the members of the House. This is Section 13, which governs the requirements necessary before a certificate allowing a company to commence business can be issued. The sub-sections in question read as follows: It must be shown that "not less than two hundred and fifty thousand dollars of capital stock has been bona fide subscribed," and that "a company has at its credit in a chartered bank at least one hundred thousand dollars paid in by subscribers on account of their subscriptions in excess of any and all liabilities of the company in connection with incorporation, procuring of subscriptions, organization or otherwise howsoever."

"MUTUAL" PROTECTION AGAINST DISABILITY AND DEATH

Many Policyholders fear that a time will come when, owing to permanent disability from illness or accident, they will be disqualified from earning an income and paying their premiums. The Mutual Life of Canada issues a Policy which not only waives further payment of premiums but provides a monthly income of $10.00 per thousand of insurance, should such a condition develop and be clearly proven. This is a Policy which affords protection to the full amount of the policy at death for the beneficiary and protection for the assured while helpless—Write for full particulars.

One of the most perfect Insurance Policies issued.

The Mutual Life Assurance Co. of Canada
Waterloo Ontario

TO PROVIDE PROTECTION
for dependents is by no means the only function of a Life Insurance Policy. Some of the other uses to which the Great-West Policies may be put are:

- Protection for one's own future.
- Protection for business enterprises.
- To compel systematic saving.
- Provision for paying a mortgage.
- Providing a life income for self or dependents.

The Company issues many different plans of insurance. Premiums are low and the profits to policyholders remarkably high. Information on request.

The Great-West Life Assurance Co.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions Dividends and Future Plans

(Continued from page 8.)

their intrinsic values. The reserves of your system are represented only by securities such as would be invested in by the highest class of fiduciary institutions. The desire of your trustees is to constantly maintain the stability and strength of your investment, so that when periods of stagnation in business arrive the shareholders may be reasonably assured that the income from their investment in the Mackay Companies will not be lessened."

No details are given as to the amount of the preferred that has been bought in. The balance sheet shows merely the usual $50.000,000 issued. Dividend payments on both preferred and common, too, are lumped. If, however, the 6 per cent. dividend on the common is deducted from the total dividend payments, it would appear that $1,942,374 was distributed in preferred dividends in 1917, instead of $2,000,000 as in the previous year.

The statement of the year's results shows a slight falling off in income from investments in other companies, and, after paying dividends, only $6,108 remained as a surplus to be carried forward by a company with an issued capital of upwards of $91,000,000. The actual results of the year's operations, however, are obscured, because of a situation again explained in the following extract from the report: "The income of the subordinate companies of the Mackay Companies is greater than is required to pay the dividends of the Mackay Companies, but its policy is to obtain from these companies only sufficient funds to meet those dividends." Profit and loss figures for two years are as follow:—

	1917.	1916.
Income	$ 4,519.364	$ 4,683,265
Less:		
Expenses	89,058	56,799
Dividends	4,425,198	4,069,020
Balance	$ 5,108	$ 557,448

The balance sheets of 1917 and 1916 compare as follows:—

Assets:	1917.	1916.
Investments	$92,417,778	$92,005,444
Cash	881,074	1,228,299
Total	$93,298,852	$93,293,744
Liabilities:		
Preferred stock	50,000,000	50,000,000
Common stock	41,380 400	41,380,400
Surplus	1,918,452	1,913,344
Total	$93,298,852	$93,293,744

The report draws attention to the fact that it is now 13 years since the outstanding common shares have been increased and 11 years since the outstanding preferred shares have been increased. Meantime, no notes or bonds have been issued or debts incurred. The dividends on the common shares were increased on April 1st, 1917, from the basis of 5 per cent. to 6 per cent., payable quarterly. The confidence reposed in the management is shown in the ever increasing number of employees who are becoming shareholders in the Mackay Companies.

Shredded Wheat Company.—The annual report for the year 1917 shows satisfactory results. Gross income amounted to $1,249,981, a decrease from the previous year of $126,000. The amount appropriated for reserve was less, but the war tax reserve took much more, with the result that net income, at $1,046,111, was $129,000 less than in 1916. The surplus left for dividends, after adding what was carried forward from the previous year, was $1.389,939, as against $1,606,357 before, and after paying the regular dividends, the balance brought forward into the current year was $614,939. As the large sum of $575.000 was credited to "good will," a year ago, the amount brought forward on the books was only $343,827 that year. The profit and loss account, compared, follows:—

Income Statement:	1917.	1916.
Gross income, less operating expenses	$ 1,249,981	$ 1,375,839
Reserved for depreciation	54,000	57,548
Reserved for income and war taxes	149,869	45,730
Net income for year	$ 1,046,111	$ 1,175,759
Reserve for wheat price protection	....	96,800
At January 1	346,827	430,597
Net income	1,046,111	1,175,759
Dividends declared	775,000	575,000
Credited to goodwill	....	575,000
Balance at December 31	614,939	343,827

Assets:	1917.	1916.
Cash on hand and in banks	$ 348,182	$ 541,896
Invested in bonds	246,443	196,348
Accounts, products and materials	1,638.605	1,473.260
Land, buildings and equipments	2,454,099	2,921,183
Invested in subsidiary companies	1,251,000	....
Patents, copyrights, trade marks and goodwill	5.000.000	5,500.000
Held in reserve for dividend declared	....	237,000
Liabilities:		
Current—to all creditors	202,937	146,326
Dividends declared December 13, 1917	237,500	237,500
Surplus	377,944	343,827
Reserves	120,039	142,530
Capital stock	10.000 000	10.000.000

Carriage Factories, Limited.—Total profits from subsidiaries, after providing $27,000 for depreciation, together with income from rental charges, etc., amounted in 1917 to only $34,666, according to preliminary figures from the statement to be submitted to shareholders at the annual meeting. That compared with $46,334 in 1916, and $309,263 in 1915, when the company earned the equivalent of 22 per cent. on its preferred stock and 15.3 on its common.

In 1916 profits covered head office expenses, bond interest and other charges with a small balance to spare. In 1917, after deducting $16,195 for head office expenses and discount on bonds, only $18,471 remained against bond interest of $28,620. So far from any profit resulting to shareholders from the year's operations, therefore, the payment of fixed charges reduced the balance in profit and loss account from $315.978 to $305,830. Comparisons of profit and loss figures are as follow:—

	1917.	1916.
Profits	$ 23,151	$ 34,789
Rents, etc.	11,515	11,545
Total profits	$ 34,666	$ 46,334
Expenses, etc.	16,195	12,879
Net profit	$ 18,471	$ 33,454
Bond interest	28,620	29,310
Balance	*$10,149	$ 4,144
Preferred dividend	......	......
Balance	*$10,149	$ 4.144
Previous balance	315.978	311,833
Total profit and loss	$305.830	$315,978

---

*Deficit.

The balance sheet shows minor changes. Loans are slightly higher at $1,175,476. but accounts payable have been reduced about $66,000 to $237.495. Inventories at $1,342,734 are about $48,000 higher. but accounts and bills receivable are some $74.000 lower at $871,379. The aggregate of current assets is $2,228,122, against current liabilities of $1,441,618;

The Canada Food Board has extended from March 1 to March 15 the time within which bakers using five barrels of flour or more per month for the manufacture of bread, cake or other bakery products for sale, must obtain a license from the Food Boards.

RAILWAY EARNINGS

The following are the earnings of Canada's transcontinental lines for the first three weeks in February:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
February 7	$1,890,000	$2,096,000	+ $206,000
February 14	2,180,000	2,306,000	+ 126,000
February 21	2,225,000	2,435,000	+ 210,000

Grand Trunk Railway.

February 7	$ 928,462	$ 675,115	— $253,347
February 14	828,671	752,861	— 75,810
February 21	956,487	980,013	+ 23,526

Canadian Northern Railway

February 7	$ 493,600	$ 634,600	+ $141,000
February 14	602,000	688,000	+ 86,000
February 21	598,700	652,800	+ 54,100

FARM LOANS TO COST MORE

Farmers who borrow money from the British Columbia Land Settlement Board will hereafter have to pay a substantial increase in interest charges. By order-in-council recently passed by the executive council the rate hitherto prevailing—6½ per cent.—has been increased to 7½ per cent., the increase to be effective as from September 15th last. On loans approved by the board prior to that date the old rate of 6½ per cent. will remain in force.

When the system of farm loans was first made effective under the legislation passed by the late administration by which the now defunct Agricultural Credits Commission was inaugurated, the plan of financing loans was by means of bond issues by the province. The Agricultural Credits Commission, after its work was initiated, sold $1,000,000 bonds, the greater part of which was loaned or ear-marked before the commission was abolished by the present government, which, under the Land Settlement Act, named a Land Settlement Board, by which the farm loan system was carried on. A change was made in the system of financing whereby the principle of bond issues to raise money for loans was removed and funds required were taken from consolidated revenue.

The new board has not loaned much money, contenting itself with passing upon loans made by the former commission and disbursing the balance of the $1,000,000 loan left when the old board went out of existence.

CANADA'S TRADE HAS INCREASED

Canada's trade for the ten months of the fiscal year ending on January 31st reached a total of $2,229,493,276, according to the monthly statement issued from the customs department. This constitutes an increase of $351,208,579 over the same period last year, when the total trade amounted to $1,878,284,697. Domestic merchandise exported reached a total of $1,353,811,184 during the ten months of this year as against $960,736,072 during 1917. The exports of domestic merchandise during the month of January, this year, however, were lower than a year ago. They totalled $96,216,284 as against $99,106,259 a year ago.

Merchandise entered for consumption during the ten months this year reached a total of $823,059,701 as compared with $674,964,548 a year ago. During the month of January the total of this class was $60,677,414, which was lower than in January, 1917, when it reached $72,323,074. Foreign merchandise exported during the ten months of the fiscal year totalled $38,874,724 as against $20,470,769 for a similar period in 1917, and coin and bullion exported was $2,972,822 as compared with $196,190,607 a year ago.

The total of dutiable goods entered for consumption during the ten months ending January 31st was $460,976,255. Last year this class of goods totalled $370,646,468. Free goods during the ten months amounted to $362,082,846 as against $304,318,080 in 1917. Duty collected during the ten months of 1917 totalled $136,339,474, which was a substantial increase over the same period a year ago, when it reached $119,141,351.

CROWN LIFE INSURANCE COMPANY

Among the outstanding features of the annual statement for the past year of the Crown Life Insurance Company, Toronto, are the increase of cash income and the decrease of the operating cost. The cash premium income totalled $551,869 in 1917, compared with $461,342 in 1916. The total cash income, less expenditure, was $281,532, which was nearly double the previous year's figure of $144,658. The expense ratio, according to the 10 and 1 basis of calculation, was reduced to 12.6 per cent. Death claims resulting from the war constitute about one-half of the total number.

The amount of new business issued and reinstated was $4,343,768, and the amount of insurance in force at December 31st, 1917, was $15,874,283. The company is making substantial progress in all departments, and is steadily increasing its policyholders' surplus fund in spite of war conditions.

In discussing with *The Monetary Times* the company's outlook, Mr. H. R. Stephenson, F.A.S., assistant manager and actuary, said: "We are confident that a substantial increase in the scale of dividends to policyholders will be justified immediately upon the termination of the war." Mr. G. T. Somers is president of the company.

STANDARD BANK OF CANADA

The forty-third annual meeting of the Standard Bank of Canada was held on Wednesday at the bank's head office building in Toronto. The shareholders expressed considerable gratification at the results of the operations of the bank for the year ending January 31st, 1918. The assets increased to practically $74,000,000, and are 23.6 per cent. greater than they were at the end of the previous year. The deposits now amount to over $58,000,000, which represents an increase of nearly $12,000,000. Of this increase, about $5,500,000 was in interest-bearing accounts and about $6,500,000 in accounts not bearing interest.

The quick assets now amount to $32,348,775, or about 51% of the total liabilities to the public. Of this amount, 43.6%, or $14,123,114, is in cash, an increase of $3,360,590 as compared with last year.

The net profits for the year were $649,546, or 19.6%, on the average paid-up capital employed during the year, or 8.33% on the combined average paid-up capital and average reserve. This compares with 8.12% earned last year.

The paid-up capital is now $3,453,290 and the reserve fund is $4,453,290, each of these items having been increased during the year by $120,047, that amount of new stock having been issued during the year at 100% premium.

Dividends at the rate of 13% per annum were paid during the year; liberal allowances were made to pension and patriotic funds; $100,000 was transferred to a special reserve for possible depreciation in securities; and $175,215 balance is carried forward. This leaves a balance at the credit of profit and loss account about $22,000 greater than at the end of the previous year.

The bank's circulation has been increased by nearly a million dollars, now amounting to $5,484,383. This item indicates a general increase in the bank's business with the public, as also does the item of $39,853,677, current loans and discounts in Canada, which is an increase of just about $4,000,000 as compared with last year. That the bank is doing its part in financing the war is reflected by the item, "Canadian municipal, British and foreign securities," which stands at $7,192,950 as compared with $1,371,937 last year. The increase is mostly due to the bank's participation in the absorption by the Canadian banks of short-dated Dominion and Imperial treasury bills.

The report was presented by the new general manager, Mr. C. H. Easson, both Mr. Easson and Mr. W. F. Cowan, the president, addressing the meeting. The statement shows an improvement in nearly every item as compared with last year, and Mr. Easson and Mr. J. S. Loudon, who has been assistant general manager of the bank for thirteen years, received the hearty thanks of the shareholders.

The directors were all re-elected, including Mr. James Hardy, F.C.A., and Mr. T. B. Greening, who had been appointed by the board during the year to fill the vacancies caused by the deaths of Messrs. Scholfield and McMillan. Mr. Hardy is a partner in the accounting firm of Jenkins and Hardy, Toronto. Mr. Greening is president and managing-director of the Pure Gold Manufacturing Company, Toronto.

January Bank Statement and Victory Loan

Savings Deposits Decreased $95,000,000 During the Month but Were Still at the High Total of $900,000,000 or over 4 Per Cent. Higher than a Year ago —All Accounts Reflecting Business Activities are Stronger than in January, 1917.

	January, 1917.	December, 1917.	January, 1918.	Year's Inc. or dec.	Month's Inc. or dec.
Deposits on demand	$427,308,526	$569,441,871	$559,777,237	+ 30.9	— 1.8
Deposits after notice	864,163,344	995,978,013	900,314,256	+ 4.2	— 9.5
Current loans in Canada	806,479,147	858,533,298	855,506,506	+ 6.1	— 0.3
Current loans elsewhere	85,989,511	111,581,098	116,220,343	+ 36.4	+ 4.5
Loans to municipalities	24,487,273	36,353,039	40,015,468	+ 66.6	+ 11.1
Call loans in Canada	79,737,064	71,779,020	76,239,201	— 3.8	+ 7.0
Call loans elsewhere	155,747,476	134,483,482	132,687,066	— 14.8	— 1.5
Circulation	133,358,187	208,753,337	193,567,911	+ 45.1	— 7.2

THE above are the changes in the principal accounts of the chartered banks during January. The outstanding features are the substantial decreases in deposits and circulation and the notable increases in current loans abroad, call loans in Canada and loans to municipalities. Victory Loan payments are chiefly responsible for the loss in savings deposits.

The following table gives a record of deposits for the past thirteen months:—

	Deposits payable on demand.	Deposits payable after notice.
1917—January	$427,308,526	$864,163,344
February	430,331,801	880,456,637
March	448,151,528	888,765,698
April	471,312,285	874,948,724
May	443,839,847	892,562,657
June	449,689,670	900,510,552
July	450,849,356	929,442,340
August	443,317,275	806,774,687
September	451,740,532	965,393,541
October	495,058,449	985,790,850
November	538,869,362	1,008,657,874
December	569,441,871	995,978,013
1918—January	559,777,237	900,314,256

The decrease of $95,000,000 in the savings deposits, resulting from Victory Loan payments, is the largest change ever reported by the banks in this account. As subscribers to the loan were entitled to pay their subscriptions in full on January 2nd and as a great many did this, it may be assumed that the greatest decrease in deposits on this account has been recorded. Instalments that remained to be paid after January will be met largely out of current income, as any subscriber, with the funds in the bank in January, would naturally take the government's discount on anticipated payments rather than wait. The remaining instalments of the loan should therefore slightly on existing deposits, while increases counted on from the accumulation of profits o business. Even with the decline of $95,00 per cent. during the month, savings de $36,000,000 or 4.2 per cent. larger than June last, the savings deposits reached $1,000,000,000 for the first time, but as business activity has only slightly slackened, the account will probably return above that total during the next few months.

The following table shows a record of deposits for the past six years:—

January.	On demand.	After notice.	Total.
1913	$354,518,964	$635,000,056	$989,519,020
1914	339,811,339	635,135,955	974,947,294
1915	329,916,730	666,960,482	996,877,212
1916	387,002,926	714,264,486	1,001,267,412
1917	427,308,526	864,163,344	1,291,471,870
1918	559,777,237	900,314,256	1,460,091,493

Despite the decline in savings and demand deposits in January amounting to $105,000,000, the total deposits at the end of January, 1918, were $1,460,000,000 or $169,000,000 greater than a year ago. Both demand and after notice deposits were higher last January than in any of the past six.

The trend of the Canadian loans account for the past thirteen months is shown in the following table:—

Loans.	Current in Canada.	Call in Canada.
1917—January	$806,479,147	$79,737,064
February	813,302,717	78,686,535
March	843,054,466	76,478,708
April	880,523,897	82,737,417
May	844,890,589	78,514,798
June	839,355,782	76,085,220
July	820,560,700	71,376,788
August	836,420,670	71,204,351
September	855,306,953	72,421,187
October	883,086,860	71,653,719
November	868,073,714	72,178,345
December	858,533,298	71,779,020
1918—January	855,506,506	76,239,201

Current loans in Canada decreased about $3,000,000 in ary. This change, together with decreases in circula- nd demand deposits, are normal in January following ivity of the grain-moving season and the holiday Circulation declined $21,000,000 and a reflection found in a withdrawal of a similar amount of

Of the deposit in Central Gold Reserves $18.210,000 is in gold coin; the balance is in Dominion Notes.

cover from the Central Gold Reserve, together with an increase of $17,500,000 in the banks' holdings of Dominion notes. The very small decline of $3,000,000 in current loans indicates continued pressure from business for funds to finance materials and wages at abnormally high price levels.

The following table gives a record of the loan accounts during the past six years:—

January.	Current loans in Canada.	Current loans elsewhere.	Call loan in
1913	$874,705,616	$40,098,1	
1914	811,582,130	56,051,4

Call loans in Canada in January were $3,000,000 less than a year ago but they increased about $5,000,000 during the month. This was a result of the Victory Loan transaction and not of trading on the Canadian stock exchanges. Discussing this account, the Montreal Gazette says:—

re "A moderate expansion in the volume of stock ex-
ge business in January called for little if any new
Hardy, ng by brokers, as it was based very largely on
pointed ng, which tended to reduce, rather than increase,
caused by increase in the call loans item, the first im-

T. C. BOVILLE, *Deputy Minister of Finance.*

months. There was a similar rise in call loans last April, when the third Canadian war loan was floated, although market conditions at that time were such as to suggest that brokers' ordinary loans were contracting rather than expanding. Some bond houses, as it proved, had bought fairly heavily with a view to placing the bonds later, and these purchases were financed, in part, by call loans.

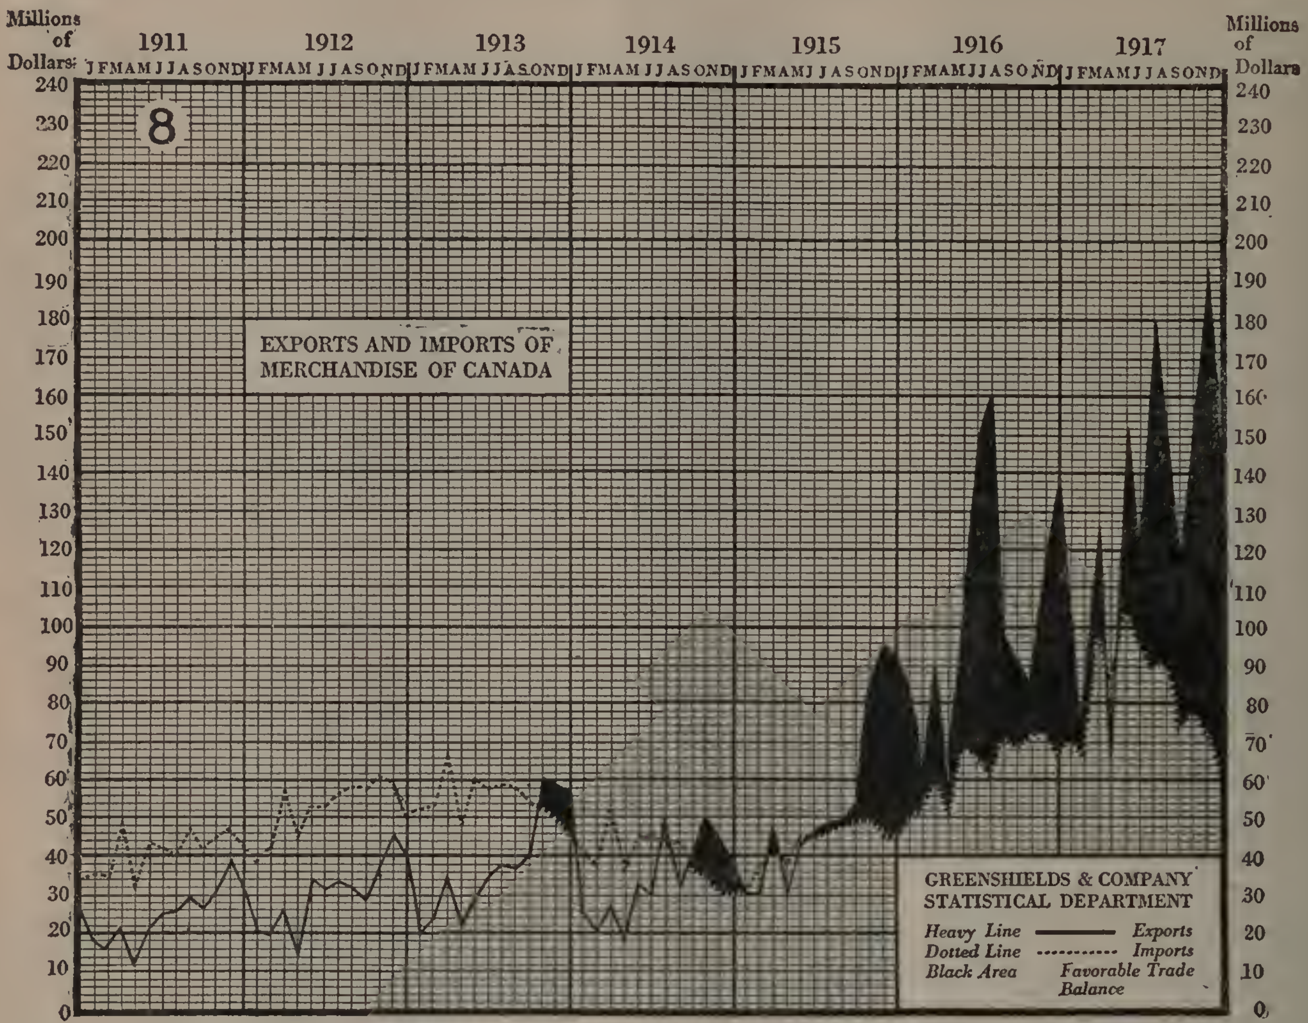
"The increase in April was 6¼ millions, and was wiped out in the next two months. The increase of 4½ millions in January is very moderate, considering the size of the Victory Loan as compared with the third war loan."

The following table shows the call loans abroad in January as compared with previous returns.

	1915.	1916.	1917	1918
January ..	$ 85,706,641	$134,248,552	$155,747,476	$132,6
February .	89,890,982	139,138,651	162,344,556	..
March ..	101,938,685	141,889,989	161,616,735	.
April ...	121,522,971	147,146,443	159,156,054	
May	136,098,835	163,400,659	168,092,675	
June ...	124,604,875	182,757,015	159,300,133	
July	117,821,174	177,121,733	151,875,676	
August ..	120,607,677	171,380,353	176,010,605	
September.	135,108,412	173,877,586	166,480,004	
October .	120,681,624	189,346,216	151,018,747	.
November.	135,530,562	183,250,389	139,832,552	.
December.	137,157,869	173,878,134	134,483,482	

Call loans abroad decreased $2,000,000 during January and were $33,000,000 or nearly 15 per cent. less than a year ago.

How Canada's Favorable Trade Balance Has Grown



The above chart tells the story of Canada's great prosperity in the past year. As a result of high prices for grain and heavy orders for munitions and other supplies sold abroad, the country's favorable trade balance for the year amounted to $588,000,000, against $479,000,000 in 1916, and $202,000,000 in 1915. The rapid and sustained development of the "black area" to really large proportions is in striking contrast with the showing in years prior to the war, when the rare instances of a balance favorable to Canada were limited to the autumn when the grain movement was at a peak.

INTERNATIONAL COAL AND COKE COMPANY

The International Coal and Coke Company, whose properties are near Coleman, Alta., reports a profit of $84,565 for 1917, against $48,230 in 1916 and $45,556 in 1915. Of the year's profit, $65,133 was transferred to reserves, leaving $19,431 to be added to profit and loss balance, which now stands at $86,583.

Mr. A. C. Flumerfelt, in his report as president, states that in view of the serious and prolonged labor troubles which occurred in the district, causing stoppage of work and entailing heavy loss, the results can be considered satisfactory.

The directors have carefully considered the adequacy of the reserves set aside for the depletion of the coal lands and the depreciation of the plant, equipment and development work. It has been decided, in order to place the reserves on a sounder and more conservative basis, to transfer the sum of $305,131 from surplus to the various reserve accounts. Apart from profit and loss balance the company was carrying $438,589 in surplus account. That surplus is reduced by the transfer to $133,458, while reserves are increased from $616,753 to $987,018.

The physical condition of the mine is reported to be good and the financial position sound. As to the later current assets of $169,420 are shown in the balance sheet, against current liabilities of $81,678.

No dividends have been paid on the company's $3,000,000 capital stock since 1914.

MONTREAL TRAMWAYS COMPANY

J. M. Hutcheson, general manager of the Montreal Tramways Company, states that the second auxiliary steam plant at Hochelaga, consisting of a steam turbine with a capacity of 12,500 kilowatt hours, or about 17,000 horse-power, will be installed towards the end of April or at the beginning of May. Asked as to how the first auxiliary plant was working out, Mr. Hutcheson replied that it was doing very well, being used in rush hours, such as in the morning and evening, when requirements or electric current are far above normal, besides which it can be used in case of any failure of transmission of hydraulic power.

OUR FUEL PROBLEM

Canada is not in a position to do without United States coal at present. With substantial factory production and heavy freight movement, for war purposes, the Dominion will next winter need as much coal from the United States as during past winters, despite rigid economy in consumption. Certain parts of Ontario have already suffered from lack of coal notwithstanding efforts to supplement the supply with wood. There is good reason to congratulate Hon. C. A. Magrath, the Fuel Controller, upon the way he has handled the coal situation during the past severe winter. He has worked quietly and effectively, and is in close co-operation with Dr. H. A. Garfield, the United States Fuel Controller. It is confidently hoped that as a result of these co-operative efforts, the Dominion will be able to obtain its full share of coal for the coming winter. This will be needed even if supplemented by local wood supplies.

Our fuel problem, however, is not a matter related only to next winter. With the continuance of the war, with the increasing shortage of labor, almost stationary production, and rapidly increasing consumption, we are confronted with a national problem which demands serious consideration and action. The distribution of the coal we obtain from the United States is an important matter. If that coal is going to Western Canada, while Ontario is short and the Alberta coal producers cannot find a market for their output, there would appear to be room for adjustment. Its value as fuel and the production and the distribution of Western Canada's coal constitute one phase of our fuel problem. The development of our peat bogs is another important phase; and the obtention of wood supplies for emergency purposes is a third factor. We should not deal with our fuel question in a day-to-day manner. We should face the probability of the United States being compelled at some time in the future to curtail materially, or stop altogether, the export of coal to Canada. The present is the time to consider the development of our fuel resources if for no other reason than insurance against future contingencies.

EMPIRE TRADE

The trade commissioner service of the United Kingdom is of recent origin. At the Imperial Conference of 1907, Sir Joseph Ward, Prime Minister of New Zealand, called attention to the need for official commercial representation of the United Kingdom in the self-governing Dominions. Mr. Lloyd George, then president of the Board of Trade, was able to inform the Conference a few days afterwards that arrangements for the appointment of such officers were being made. The measures which were subsequently taken resulted in the institution, in 1908, of the present service of four Trade Commissioners, one being appointed for Canada and Newfoundland, and one each for Australia, New Zealand and South Africa.

An extension of the service was strongly recommended in a report of the Dominions Royal Commission issued in February, 1917. The Board of Trade had simultaneously been engaged on a scheme for the strengthening of the service and it has now been decided to increase the number of British Trade Commissioners from four to fifteen or sixteen. Whereas in all the dominions there were only four commissioners, Canada alone in future will have four, the senior officer in Canada dealing also with trade in Newfoundland. The remaining eleven or twelve commissioners will be stationed in Australia, New Zealand, South Africa, India, the West Indies and the Straits Settlement.

This important development is naturally of considerable interest to the British Empire at large, especially as the idea was originally suggested by the Prime Minister of New Zealand. It will be recalled that at the Imperial War Conference in April last a resolution, on the motion of General Smuts, was passed welcoming the proposed increase of the Board of Trade service of Trade Commissioners and its extension throughout the Empire. The resolution recommended "that the governments concerned should co-operate so as to make that service as useful as possible to the Empire as a whole, especially for the promotion of inter-Imperial trade."

Commenting upon the extended service, the official Board of Trade Journal in a recent issue reminds us that the war, instead of exercising a disruptive influence on the British Empire as predicted and hoped by the enemy, has led to a keener realization of the strength of the ties, both moral and material, which bind the various portions of the Empire together. "Out of this realization," it continues, "has sprung a growing consciousness of the need for a closer co-operation in all things that matter between the States of which the Empire is composed." As the war proceeds, this opinion and the ties which bind the units of Empire are strengthened. The day is approaching when the various parts of the Empire will co-operate, as they have done in war, in matters affecting their natural resources, trade, shipping, finance, and other vital factors. Being moulded is a British Empire which will work in harmony and whose power automatically will increase. Other nations know well that this power will always be ready to champion the cause of right. It is appropriate that at such a time comprehensive action should be taken with the direct object of fostering and developing inter-Imperial trade.

PROVINCIAL CONTROL OF FORESTS

The recent proposal of Hon. Edward Brown, provincial treasurer of Manitoba, to retire the provincial debt by realizing on the natural resources of the province, was noted in these columns two weeks ago. A circular, just issued by the Canadian Forestry Association, takes issue with Mr. Brown and with the other Western political leaders who have brought forward the contention that Manitoba, Saskatchewan and Alberta should be placed upon the same basis as the older provinces in respect to ownership of their natural resources. This Association is a non-government, non-commercial body of 5,500 Canadian citizens, 1,200 of whom reside in the prairie provinces.

With the political side of the long-standing dispute over control of natural resources in the prairie provinces the Canadian Forestry Association states it is not concerned. So peculiarly, however, is the question related to proper management of the Western forests that some reference to it at this time, it thinks, is essential in the public interest.

The Association states that the bulk of the citizens of the Western provinces have an impression that the forests would constitute an immediate source of revenue to the provincial treasury and that in demanding control of the forest resources they are asking the Dominion to enhance their cash income. The ownership of the Western forests, however, is an immediate financial liability to the Dominion government, and the total income from Western forests does not equal the total outlay for protection and improvement. The Dominion Forestry Branch spends $445,000 annually on forest protection in Manitoba, Saskatchewan and Alberta, while the total revenues are approximately $39,000.

"If the forests are handed over to the Western provinces, they must accept the situation as it actually is," says the Association. "Instead of adding to their revenues, they would then have to find at least $200,000 from some fresh source with which to pay the cash deficit on one year's handling of their new forest possessions. More than that, they would, in all likelihood, automatically forfeit the provincial subsidies paid by the Dominion government amounting to: Manitoba, $409,007; Saskatchewan, $562,500, and Alberta, $562,500, as a Dominion allowance in lieu of public lands. These subsidies are paid as compensation for Dominion control of the natural resources, and would lapse with any transfer of title to the lands. What proportion of the subsidies is represented by the forest resources is not ascertainable, but assuredly it would represent a large sum for each province." These are important considerations and should have the attention of the provincial authorities during their discussions.

FLAX AND LINEN

How Canadian seed is being used in the development of flax growing in Ireland is recorded in a report received by the Department of Trade and Commerce, Ottawa, from Mr. Harrison Watson, Chief Canadian Trade Commissioner in the United Kingdom. The report states that at a meeting of the Irish linen trade held in Belfast it was decided to raise a guarantee fund of $2,500,000 to launch a scheme for growing greatly increased crops of flax seed in Ireland. Five thousand acres of land have been taken, it was stated, 4,000 being in Ulster. Enough Canadian seed has been purchased to sow 10,000 acres.

The guarantee fund is being raised by a pro rata contribution by the trade.

This interesting development is discussed on another page in special correspondence of *The Monetary Times* by a linen expert of Belfast. He points out the great possibilities ahead of the Canadian flax industry. The failure of the first linen mill in this country is recalled and emphasis is placed on the necessity of reliable and harmonious relations between the flax growers and linen manufacturers in order to have a successful flax and linen industry.

LARGER AVERAGE POLICIES

The fact that probably millions of men in the national service, drawn from every walk of life, have actually been insured in the United States during the war in amounts from $8,000 to $10,000, will establish such sums in the popular mind as the natural minimum of life insurance for an ordinarily thrifty person to carry. If this is correct, life insurance companies may expect a steady rise in average policies. While there is not government insurance of soldiers in Canada, many factors are working here towards a larger average policy. Higher incomes are being earned and since we went into the war nearly four years ago, there is a more serious consideration of life in general, including a more keen appreciation of the possibility of death itself. The average policy of the first Canadian life assurance company in 1916 increased by $103, this increase alone accounting for $915,876 of the company's business for that year. In 1917, there was again an increase of $111 in the average policy, accounting for $1,081,000. Other companies have had somewhat similar experiences.
